(6) Type of Rulemaking (check one)

Proposed Rulemaking

Final Order Adopting Regulation X

Final Order, Proposed Rulemaking Omitted

(7) Is a 120-Day Emergency Certification Attached?

No

Yes: By the Attorney General

Yes: By the Governor

(8) Briefly explain the regulation in clear and nontechnical language.

This regulation sets forth academic standards to be attained by students in public schools. The final-form revisions to Chapter 4 establish standards for science and technology and environment and ecology in Appendix B of the chapter.

(9) State the statutory authority for the regulation and any relevant state or federal court decisions.

The Public School Code of 1949 (24 P.S. §§ 1-101—27-2702).

## **Regulatory Analysis Form**

- (10) Is the regulation mandated by any federal or state law or court order, or federal regulation? If yes, cite the specific law, case or regulation, and any deadlines for action.

This final-form amendment to the regulation is not mandated by federal statute or court order. The enabling statute for the State Board of Education requires it to "establish standards governing the educational program of the Commonwealth" (24 P.S. 26-2603-B(a)).

- (11) Explain the compelling public interest that justifies the regulation. What is the problem it addresses?

Academic standards and assessments add clarity and focus to the educational programs of the public schools. Academic standards in science and technology and environment and ecology will ensure that students throughout the Commonwealth develop comparable skills and knowledge in the sciences and the environment.

- (12) State the public health, safety, environmental or general welfare risks associated with nonregulation.

Academic standards ensure that students in the Commonwealth are provided an education to develop the skills and knowledge necessary to succeed in an increasingly competitive world.

- (13) Describe who will benefit from the regulation. (Quantify the benefits as completely as possible and approximate the number of people who will benefit.)

The approximately 1.8 million students enrolled in the Commonwealth's public schools will be the direct beneficiaries. Businesses, parents and citizens generally will benefit from public school graduates demonstrating the attainment of high standards.

## **Regulatory Analysis Form**

- (14) Describe who will be adversely affected by the regulation. (Quantify the adverse effects as completely as possible and approximate the number of people who will be adversely affected.)

No adverse effect is anticipated.

- (15) List the persons, groups or entities that will be required to comply with the regulation. (Approximate the number of people who will be required to comply.)

All public schools of the Commonwealth (including intermediate units, area vocational-technical schools and public charter and alternative schools), their students and professional employees.

- (16) Describe the communications with and input from the public in the development and drafting of the regulation. List the persons and/or groups who were involved, if applicable.

Draft standards were developed in consultation with educators and subject-area experts. After receiving the draft standards from the Department, the Board conducted a series of regional roundtable discussions to gain input from teachers, parents, teacher educators, administrators and other interested parties. An external expert was retained to review and offer suggestions for improvement. After revisions, the draft standards were the subject of 3 regional public hearings. Further revisions were made prior to the Board's voting their intention to adopt these academic standards. This final-form regulation addresses public comments made on the proposed rulemaking.

- (17) Provide a specific estimate of the costs and/or savings to the regulated community associated with compliance, including any legal, accounting or consulting procedures which may be required.

N/A

### **Regulatory Analysis Form**

- (18) Provide a specific estimate of the costs and/or savings to local governments associated with compliance, including any legal, accounting or consulting procedures which may be required.

Costs to implement this regulation may include curriculum development and the professional development of teachers. These costs vary by school district. Curriculum development is an ongoing activity for schools and is typically part of their normal budgeting. Costs associated with aligning curricula with these standards at the local level will be minimized by the following efforts: technical assistance in curriculum development provided by Department staff; detailed implementation kits provided to school districts by the Department; and the Standards Implementation Project which funds Intermediate Unit services throughout the Commonwealth supporting the implementation of these and other standards. Current year funds available to the Department to support curriculum alignment in science and environment is \$225,000. The majority of costs for the development of implementation kits were incurred during the 2000-2001 fiscal year (nearly \$1.0 million).

Professional development of teachers is an ongoing activity for schools and is addressed in the normal budgeting of school districts. Specific programs designed to support the implementation of these standards will minimize any financial impact on school districts. These programs include professional development provided through the Standards Implementation Project and the Governor's Institutes for Teachers (currently provided in the Life Sciences, Technology, Physical Sciences and Environment and Ecology). In addition, Act 48 of 1999 establishing a requirement for all educators to engage in continuing professional education, further requires the Department to provide 40 hours of professional development annually at no cost to teachers. On-line, professional development courses are being developed for use in the current year in science and technology and environment and ecology. Current year funds available to the Department to support professional development is approximately \$730,000.

- (19) Provide a specific estimate of the costs and/or savings to state government associated with the implementation of the regulation, including any legal, accounting, or consulting procedures which may be required.

See # 18

### Regulatory Analysis Form

(20) In the table below, provide an estimate of the fiscal savings and costs associated with implementation and compliance for the regulated community, local government, and state government for the current year and five subsequent years.

	<b>Current FY Year</b>	<b>FY +1 Year</b>	<b>FY +2 Year</b>	<b>FY +3 Year</b>	<b>FY +4 Year</b>	<b>FY +5 Year</b>
<b>SAVINGS:</b>	\$	\$	\$	\$	\$	\$
Regulated						
Local Government						
State Government						
Total Savings						
<b>COSTS:</b>						
Regulated						
Local Government						
State Government	955,000	600,000	618,000	637,000	656,000	675,000
Total Costs						
<b>REVENUE LOSSES:</b>						
Regulated						
Local Government						
State Government						
Total Revenue Losses						

(20a) Explain how the cost estimates listed above were derived.

Current year funds are described in #18 and include nonrecurring costs for distribution of implementation kits. Subsequent year funds include costs for Governor's Institutes, ongoing technical assistance and professional development activities. These are funds specific to science and technology and environment and ecology standards; funds to support other standards are not included in this calculation.

### Regulatory Analysis Form

(20b) Provide the past three year expenditure history for programs affected by the regulation.

Program	FY -3	FY -2	FY -1	Current FY
Sci/Env Stds	360,000	\$360,000	\$1.54 million	\$955,000

(21) Using the cost-benefit information provided above, explain how the benefits of the regulation outweigh the adverse effects and costs.

It is not possible to estimate costs that schools may incur in developing curricula aligned with these standards and in providing professional development to teachers that is not part of the current curriculum and professional development activities of schools. School districts and area vocational-technical schools will receive over \$4 billion in FY 2001-02 to fund instructional programs for students. This funding will assist in meeting additional expenditures that may be necessary to implement clear, rigorous standards. Additional expenditures are justified by the need to ensure high school graduates are more able to meet the demands of the workplace, higher education and to remain lifelong learners.

(22) Describe the nonregulatory alternatives considered and the costs associated with those alternatives. Provide the reasons for their dismissal.

Nonregulatory alternatives were not considered since this is a revision of existing regulation.

(23) Describe alternative regulatory schemes considered and the costs associated with those schemes. Provide the reasons for their dismissal.

N/A

### **Regulatory Analysis Form**

(24) Are there any provisions that are more stringent than federal standards? If yes, identify the specific provisions and the compelling Pennsylvania interest that demands stronger regulation.

Because there are no federal standards, these regulations are not more stringent.

(25) How does this regulation compare with those of other states? Will the regulation put Pennsylvania at a competitive disadvantage with other states?

Most states have or are developing academic standards in these disciplines. The regulation will not put Pennsylvania at a competitive disadvantage.

(26) Will the regulation affect existing or proposed regulations of the promulgating agency or other state agencies? If yes, explain and provide specific citations.

No.

(27) Will any public hearings or informational meetings be scheduled? Please provide the dates, times, and locations, if available.

No additional public hearings were held during the public comment period.

### **Regulatory Analysis Form**

(28) Will the regulation change existing reporting, record keeping, or other paperwork requirements? Describe the changes and attach copies of forms or reports which will be required as a result of implementation, if available.

The final-form regulation will not change existing reporting, record keeping or other paperwork requirements.

(29) Please list any special provisions which have been developed to meet the particular needs of affected groups or persons including, but not limited to, minorities, elderly, small businesses, and farmers.

N/A

(30) What is the anticipated effective date of the regulation; the date by which compliance with the regulation will be required; and the date by which any required permits, licenses or other approvals must be obtained?

Effective upon publication.

(31) Provide the schedule for continual review of the regulation.

The effectiveness of Chapter 4 will be reviewed by the State Board of Education every 4 years, in accordance with the Board's policy and practice respecting all regulations promulgated by the Board.

and Environment and Ecology

## PREAMBLE

**DEPARTMENT OF EDUCATION  
STATE BOARD OF EDUCATION  
22 PA. CODE – EDUCATION  
CHAPTER 4: ACADEMIC STANDARDS AND ASSESSMENT**

The State Board of Education (Board) amends Chapter 4 (relating to academic standards and assessment) to add academic standards in science and technology and environment and ecology, to read as set forth in Annex A, under authority of the Public School Code of 1949 (24 P.S. §§ 1-101 – 27-2702).

Notice of proposed rulemaking was published at 31 Pa.B. 2136 (April 21, 2001) with an invitation to submit written comments.

### Purpose

These final-form regulations add academic standards in science and technology and environment and ecology. The purpose of adding these requirements is to specify academic standards to be achieved by students enrolled in the public schools (including public charter schools) of this Commonwealth.

### Comments and Responses

More than 120 individuals and organizations offered comments on the proposed rulemaking. Fourteen letters were received from members of the House and Senate Education Committees. In addition, the Independent Regulatory Review Commission (IRRC) offered detailed comments on the proposed rulemaking.

Evolution and the theory of evolution. In the proposed rulemaking, standards 3.3.10.D and 3.3.12.D require what must be taught about evolution and the theory of evolution. A wide range of opinions and suggestions for change regarding evolution were expressed by public commentators and members of the House and Senate Education Committees. The majority of public commentators objected to the wording of these standards in the proposed rulemaking and stated that the theory of evolution was inappropriately singled out for critical analyses. They suggested that these standards would permit or even encourage schools to teach creationism or intelligent design. Others supported the wording in the proposed rulemaking because they believed that it would encourage healthy skepticism regarding evolution. Some suggested that schools be required to teach other theories of evolution, including intelligent design. Several suggested that it may be impossible to separate religious beliefs from the teaching of evolution and recommended that all mention of evolution regarding the origin of life be removed from the document. The IRRC questioned the intent of these two standards and suggested that they duplicate standards in Section 3.2 *Inquiry and Design* that sets forth requirements for the examination of new data and critical evaluation of existing scientific theories.

Despite the reading that many had of these standards in the proposed rulemaking, the Board did not intend to encourage the teaching of creationism or intelligent design; standards were written to encourage critical thinking by students. To clarify this intent, a number of revisions have been made in these final-form regulations. The descriptor calling for students to analyze records and studies “that support or do not support the

theory of evolution” in 3.3.10.D has been substantially changed to call for students to analyze studies “relevant to the theory of evolution.” The descriptor “Analyze the impact of new scientific facts on the theory of evolution” in 3.3.12.D. has been eliminated in this final-form regulation.

To reinforce the importance the Board places on critical thinking in the teaching of scientific theories, changes were made in standard 3.2.12.A, by specifying a number of theories (including the theory of evolution) which might be critically evaluated to meet the standard “Evaluate the nature of scientific and technological knowledge.” In addition, the theory of evolution has been added as an example in standards 3.1.10.E and 3.1.12.E in section 3.1 *Unifying Themes*.

Because of the detailed attention to evolution in comments received by the Board, there were many suggestions to clarify and improve the wording of the individual standards in Section 3.2 *Biology* that deal with evolutionary concepts. As a result, specific changes have been made in these final-form regulations to standards 3.3.4.C, 3.3.7.C, and 3.3.12.C regarding inherited characteristics, gene mutation, and natural selection. Specific changes were also made to standards 3.3.7.D, 3.3.10.D, and 3.3.12.D regarding individual differences, population growth, gene frequency, and natural selection.

Clarifying the meaning of individual standards. Several changes were recommended by commentators, members of the House Education Committee and the

IRRC to make individual standards more precise and clear. Standard 3.1.4.D in the proposed rulemaking states, “Describe scale as a ratio (e.g., pipe fittings).” Members of the House Education Committee and IRRC commented that the use of “pipe fittings” as an example is confusing and recommended the use of model scales or map scales. The final-form regulations refer to “map scales” in standard 3.1.4.D.

Standard 3.2.10.A in the proposed rulemaking states, “Know that science is limited to the study of observable aspects of the world and universe.” Commentators and IRRC noted that the term “observable” could be interpreted to mean “directly visible.” IRRC recommended that since not all scientific phenomena can be “seen” directly, the term observable should be defined in Section IX. *Glossary*. In response to these comments, the statement has been changed in the final-form regulations to state, “Know that science uses both direct and indirect observation means to study the world and the universe.”

Standard 3.4.4.D requires fourth graders to “Recognize the earth’s place in the solar system” and to “explain (e.g., days, seasons), major lunar phases and eclipses.” Commentators and the IRRC commented that these requirements are too abstract for fourth grade students to understand. IRRC noted that the proposed regulation does not specify the depth of understanding of these concepts in the fourth grade and recommended that such be specified in the final-form rulemaking. After considering the comments, the Board did not elect to make changes to the standard 3.4.4.D. Information and examples of the level of understanding required by this standard and others will be

contained in the “Classrooms Connections” kits, other training and instructional materials, and parent information.

Standard 3.5.4.D. in the proposed rulemaking requires fourth grade students to “describe locations of fresh and salt water” in or near Pennsylvania. Also, tenth and twelfth grade standards (3.5.10.D and 3.5.12.D) require students to compare sources of water and development of water use in Pennsylvania. Commentators and IRRC commented that these standards should not be limited to bodies of water in Pennsylvania. These final-form regulations revise standards 3.5.4.D, 3.5.10.D, and 3.5.12.D to more generally refer to sources of water and development of water use, thus not restricting study to Pennsylvania alone.

Standard 3.5.7.C in the proposed rulemaking, relating to meteorology for seventh graders, expects them to “Identify cloud types, wind directions and barometric pressure changes are associated with weather patterns...”. Commentators and IRRC suggested that the comparable fourth grade standard should expect students to identify cloud types as a precursor for the seventh grade standard. These final-form regulations add an expectation for students to identify cloud types in standard 3.5.4.C.

Agricultural science. Commentators, members of the House Education Committee and the IRRC stated that the proposed standards did not adequately address the agricultural sciences as required by Chapter 4 or reflect the importance of agriculture

and agricultural sciences in Pennsylvania. As a result, the Board has made a number of changes in these final-form regulations.

In the Science and Technology standards, language has been added to Section 3.6 *Technology Education*, specifically under the descriptors for standards 3.6.7.A, 3.6.10.A, and 3.6.12.A. Taken together these descriptors call for students to understand, describe and apply agricultural sciences and their impact and relationship to biotechnology. In Section 3.8 *Science, Technology and Human Endeavors*, additional descriptors have been added to standards 3.8.7.B, 3.8.10.B, and 3.8.12.B that call for students to identify, explain, assess and apply knowledge of agricultural sciences in meeting human needs.

In the Environment and Ecology standards, new standards in the final-form regulation have been added to Section 4.4 *Agriculture and Society* specific to agriculture and agricultural sciences. New standards 4.4.4.B, 4.4.7.B, 4.4.10.B, and 4.4.12.B require students to identify the role of the sciences in Pennsylvania agriculture, investigate how agricultural science has recognized the various soil types, assess the influence of agricultural science on farming practices, and describe how agricultural science has influenced biotechnology. Each of these new standards also includes detailed descriptors.

IRRC suggested that standard 4.8.12.B in the proposed rulemaking that requires students to “analyze how technology has improved agricultural productivity” was more consistent with the standards under Section 4.4.12 relating to Agriculture and Society. In

these final-form regulations, the standard has been eliminated in favor of more detailed standards in Section 4.4 that encompass concepts of agricultural productivity.

Implementation concerns. Commentators and members of the House Education Committee raised concerns about the implementation of these science standards. First, there is a concern that these standards will change the current organization and sequencing of science courses and curricula at the high school because there are standards for biology, chemistry, earth sciences and the like at both the 10<sup>th</sup> and 12<sup>th</sup> grade levels. It is anticipated that each district will be reviewing its current curriculum and will modify it where necessary to ensure that it is organized to enable students to meet these standards. Based on our discussions with teachers and curriculum directors around the state, these standards will not require courses in each of the science disciplines each year; they will, however, encourage more integration in the science curriculum across the disciplines.

Second, a concern was expressed about when state assessments in science would be administered. Currently, state assessments in reading and mathematics are administered in grades 5, 8, and 11 while assessments in writing are administered in grades 6, 9, and 11. Science assessments will be administered in grades 4, 7 and 10. It is anticipated that science assessments will begin in the 2002-03 school year.

Changes for clarity. IRRC recommended that the table of contents for both sets of standards list subject areas and categories with the same capital letters that label them

in the text of the standards. That change was made in these final-form regulations to Section VII. *Table of Contents* and Section X. *Table of Contents*.

IRRC recommended that the Section 3.2 *Inquiry and Design*, be changed to “Inquiry and Experimental Design” to accurately reflect its attention to experimental design. After considering the comment, the Board elected to retain the title as “Inquiry and Design” because the section relates not solely to experimental design, but also to technological processes, applications and design.

Misspellings, punctuation errors and typographical errors. The following corrections to the final-form as recommended by IRRC have been made in these final-form regulations. “Ecology” was misspelled in the title of Section X *Table of Contents* in the Pennsylvania Bulletin version of the proposed rulemaking and is corrected in these final-form regulations. A typographical error occurred in the second sentence of the descriptor for Section 3.2 *Inquiry and Design* as published in the Pennsylvania Bulletin. These final-form regulations change the period to a comma after the word “estimating.” An additional typographical error is corrected in the first sentence of standard 3.2.10.C where “to” is changed to “of.”

Additional definitions. Commentators and the IRRC suggested that additional terms used in the text of the standards be defined in the glossaries of the standards found in Sections IX and XII. Terms used in the science and technology standards that are now defined in these final-form regulations are “evolution,” “fact,” “hypothesis,” “law,”

“theory,” and “theory of evolution.” Terms used in the environment and ecology standards that are now defined in these final-form regulations are “commodities,” “consumer,” “decomposer,” “endangered species,” “environment,” “extinction,” “hazardous waste,” “regulation,” and “shredder.” In addition, a more detailed definition of “risk management” has been added.

#### Affected Parties

These final-form regulations affect the students and professional employees of the public schools of the Commonwealth (including intermediate units, area vocational-technical schools, public charter and alternative schools).

#### Cost and Paperwork Estimates

Costs to implement these final-form regulations may include curriculum development and the professional development of teachers. These costs vary by school district. Curriculum development is an ongoing activity for schools and is typically part of their normal budgeting. Costs associated with aligning curricula with these standards at the local level will be minimized by the following efforts: technical assistance in curriculum development provided by Department staff; detailed implementation kits provided to school districts by the Department; and the Standards Implementation Project which funds Intermediate Unit services throughout the Commonwealth supporting the implementation of these and other standards. The majority of the cost to develop

implementation kits was incurred in the previous fiscal year. Current year funds available to the Department to support curriculum alignment is \$225,000.

Professional development of teachers is an ongoing activity for schools and is addressed in the normal budgeting of school districts. Specific programs designed to support the implementation of these standards will minimize any financial impact on school districts. These programs include professional development provided through the Standards Implementation Project and Governor's Academies for Teachers (currently provided in the Life Sciences, Technology, Physical Sciences and Environment and Ecology). In addition, the act of November 23, 1999 (P.L. 529, No. 48) (Act 48) establishing a requirement for all educators to engage in continuing professional education, further requires the Department to provide 40 hours of professional development annually at no cost to teachers. On-line professional development courses are being developed for use in the current year for science and technology and environment and ecology. Current year funds available to the Department to support professional development is \$730,000.

Effective Date

These final-form regulations will become effective upon final publication in the Pennsylvania Bulletin.

Sunset Date

The effectiveness of Chapter 4 will be reviewed by the State Board of Education every 4 years, in accordance with the Board's policy and practice respecting all regulations promulgated by the Board. Thus, no sunset date is necessary.

Regulatory Review

Under Section 5(a) of the Regulatory Review Act (71 P.S. § 745.5(a)), on April 11, 2001, the Board submitted a copy of the proposed rulemaking published at 31 Pa.B. 2136 (April 21, 2001) to IRRC and to the Chairpersons of the House and Senate Committees on Education for review and comment.

In compliance with section 5(c) of the Regulatory Review Act, the Board also provided IRRC and the Committees with copies of the comments received as well as other documentation. In preparing the final-form regulations, the Board considered the comments received from IRRC, the Committees and the public.

Under section 5.1(d) of the Regulatory Review Act (71 P.S. §745.5a(d)), the final-form regulations were (deemed) approved by the Senate Education Committee on \_\_\_\_\_ and (deemed) approved by the House Education Committee on \_\_\_\_\_. IRRC met on \_\_\_\_\_, and approved the final-form regulations in accordance with section 5.1(e) of the Regulatory Review Act.

Contact Person

The official responsible for information on these final-form regulations is Peter H. Garland, Executive Director of the State Board of Education, 333 Market Street, Harrisburg, PA 17126-0333, (717) 787-3787 or TDD (717) 787-7367.

Findings

The Department finds that:

- (1) Public notice of the intention to adopt these final-form regulations was given under sections 201 and 202 of the act of July 31, 1968 (P.L. 769, No. 240) (45 P.S. §§ 1201 and 1202) and the regulations promulgated thereunder in 1 Pa. Code §§ 7.1 and 7.2.
- (2) A public comment period was provided as required by law and all comments were considered.
- (3) The final-form regulations are necessary and appropriate for the administration of the act.

Order

The Board, acting under the authorizing statute, orders that:

- (a) The regulations of the Board, 22 Pa. Code, Chapter 4, are amended by adding Appendix B to read as set forth at Annex A.

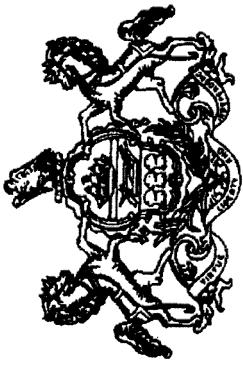

- (b) The Executive Director will submit this order and Annex A to the Office of General Counsel and the Office of Attorney General for review and approval as to legality and form as required by law.
- (c) The Executive Director of the Board shall certify this order and Annex A and deposit them with the Legislative Reference Bureau as required by law.
- (d) This order is effective upon final publication in the *Pennsylvania Bulletin*.

Peter H. Garland

Executive Director

# Academic Standards for Science and Technology

## VIII. INTRODUCTION

This document describes what students should know and be able to do in the following eight areas:

- ◊ 3.1. Unifying Themes of Science
- ◊ 3.2. Inquiry and Design
- ◊ 3.3. Biological Sciences
- ◊ 3.4. Physical Science, Chemistry and Physics
- ◊ 3.5. Earth Sciences
- ◊ 3.6. Technology Education
- ◊ 3.7. Technological Devices
- ◊ 3.8. Science, Technology and Human Endeavors

These standards describe what students should know and be able to do by the end of fourth, seventh, tenth and twelfth grade. In addition, these standards reflect the increasing complexity and sophistication that students are expected to achieve as they progress through school.

This document avoids repetition, making an obvious progression across grade levels less explicit. Teachers shall expect that students know and can apply the concepts and skills expressed at the preceding level. Consequently, previous learning is reinforced but not retaught.

Standards are arranged by categories, for example, 3.5 Earth Science. Under each category are standard statements that are preceded by a capital letter; for example, in 3.1 Unifying Themes, grade 10.B, "Describe concepts of models as a way to predict and understand science and technology." Following the standard statements are bulleted standard descriptors, which explain the nature and scope of the standard. Descriptors specify the nature of the standard and the level of complexity needed in meeting that standard in a proficient manner. Descriptors serve to benchmark the standard statement. Curriculum, instruction and assessment should focus on meeting the standard statement. Technology Education, computer applications and science are separate curricular areas. Meeting standards should be approached as a collaborative effort among all curricular areas.

# Academic Standards for Science and Technology

*The following descriptors explain the intent of each standard category:*

## **3.1. Unifying Themes**

Unifying themes of science and technology provide big ideas that integrate with significant concepts. There are only a few fundamental concepts and processes that form the framework upon which science and technology knowledges are organized - motion and forces, energy, structure of matter, change over time and machines. These themes create the context through which the content of the disciplines can be taught and are emphasized in each standard.

## **3.2. Inquiry and Design**

The nature of science and technology is characterized by applying process knowledge that enables students to become independent learners. These skills include observing, classifying, inferring, predicting, measuring, computing, estimating, ESTIMATING, communicating, using space/time relationships, defining operationally, raising questions, formulating hypotheses, testing and experimenting, designing controlled experiments, recognizing variables, manipulating variables, interpreting data, formulating models, designing models, and producing solutions. Everyone can use them to solve real-life problems. These process skills are developed across the grade levels and differ in the degree of sophistication, quantitative nature and application to the content.

## **3.3. Biological Sciences**

Biology concerns living things, their appearance, different types of life, the scope of their similarities and differences, where they live and how they live. Living things are made of the same components as all other matter, involve the same kinds of transformations of energy and move using the same basic kinds of forces as described in chemistry and physics standards. Through the study of the diversity of life, students learn to understand how life has changed over a long period of time. This great variety of life forms continues to change even today as genetic instructions within cells are passed from generation to generation, yet the amazing integrity of most species remain.

## **3.4. Physical Science Chemistry and Physics**

Physics and chemistry study properties of objects INVOLVE THE STUDY OF OBJECTS AND THEIR PROPERTIES. Students examine changes to materials during mixing, freezing, heating and dissolving and then learn how to observe and measure results. In chemistry students study the relationship between matter, atomic structure and its activity. Laboratory investigations of

## **Academic Standards for Science and Technology**

the properties of substances and their changes through a range of chemical interactions provide a basis for students to understand atomic theory and a variety of reaction types and their applications in business, agriculture and medicine. Physics deepens the understanding of the structure and properties of materials and includes atoms, waves, light, electricity, magnetism and the role of energy, forces and motion.

### **3.5. Earth Sciences**

The dynamics of earth science include the studies of forces of nature that build the earth and wear down the earth. The understanding of these concepts uses principles from physical sciences, geography and mathematics.

### **3.6. Technology Education**

Technology Education is the use of accumulated knowledge to process resources to meet human needs and improve the quality of life. Students develop the ability to select and correctly use materials, tools, techniques and processes to answer questions, understand explanations and solve problems encountered in real life situations. These overriding themes require students to design, create, use, evaluate and modify systems of Biotechnologies, Information Technologies, and Physical Technologies.

### **3.7. Technological Devices**

Students use tools to observe, measure, move and make things. New technological tools and techniques make it possible to enact far-reaching changes in our world. Technology enhances the students' abilities to identify problems and determine solutions. Computers play an integral role in every day life by extending our abilities to collect, analyze and communicate information and ideas.

### **3.8. Science, Technology and Human Endeavors**

Scientific knowledge and societal needs often create a demand for new technology. Conversely, new technology advances scientific knowledge. Both influence society through the impact of their products and processes.

# Academic Standards for Science and Technology

**What Is Science?** Any study of science includes the search for understanding the natural world and facts, principles, theories and laws that have been verified by the scientific community and are used to explain and predict natural phenomena and events.

Acquiring scientific knowledge involves constructing hypotheses using observation and knowledge in the content area in order to formulate useful questions that provoke scientific inquiry. As a result of repeated, rigorous testing over time and applying multiple perspectives to a problem, consistent information emerges. A theory describes this verifiable event or phenomena. Theories are powerful elements in science and are used to predict other events. As theories lose their ability to predict, they are modified, expanded or generalized or incorporated into a broader theory.

Knowledge of what science is incorporates carefully developed and integrated components:

- **Nature of science** -- the ways in which scientists search for answers to questions and explanations of observations about the natural world; includes process knowledge of observing, classifying, inferring, predicting, measuring, hypothesizing, experimenting and interpreting data
- **Unifying themes of science** -- concepts, generalizations and principles that result from and lead to inquiry
- **Knowledge** -- facts, principles, theories and laws verifiable through scientific inquiry by the world community of scientists; includes physics, chemistry, earth science and biological sciences
- **Inquiry** -- an intellectual process of logic that includes verification of answers to questions about and explanations for natural objects, events and phenomena
- **Process Skills** -- Recognition by students how knowledge is acquired and applied in science by observing, classifying, inferring, predicting, measuring, computing, estimating, communicating, using space/time relationships, defining operationally, formulating hypotheses, testing and experimenting, designing controlled experiments, recognizing variables, manipulating variables, interpreting data, formulating models, designing models and producing solutions.
- **Problem solving** -- application of concepts to problems of human adaptation to the environment that often leads to recognition of new problems; has social implications and leads to personal decision-making and action; a process which forms the link for interactions between scientific and technological results or findings; involves operational definitions, recognizing variables, formulating models and asking questions
- **Scientific thinking** -- the disposition to suspend judgment, not make decisions and not take action until results, explanations or answers have been tested and verified with information.

# Academic Standards for Science and Technology

**What Is Technology Education?** It is the means by which we teach **Technology TECHNOLOGY**. Technology is a body of knowledge separate from but related to the sciences, with specific content, curriculum and specific certification requirements. Technology is the application of tools, materials, processes and systems by humans to solve problems and provide benefits to humankind. We use technology in an attempt to improve our environment. These improvements may relate to survival needs (e.g., food, shelter, defense) or they may relate to human aspirations (e.g., knowledge, art, control). They can include unexpected benefits, unexpected costs and unexpected risks.

Technology education involves a broad spectrum of knowledge and activities. Effective technology education combines knowledge of content, process and skills to provide students with a holistic approach to learning. Technology education offers unique opportunities to apply numerous academic concepts through practical, hands-on applications. Instructional **technology TECHNOLOGY**, on the other hand, deals specifically with use of computers and different software to solve problems and communicate effectively. Knowledge of content, process and skills should be used together to effectively engage students and promote a complete understanding of the sciences, related technologies and their interrelationship. The relationship between science and technology is one where science builds principles or theories and technology provides the practical application of those principles or theories.

Knowledge of content, process and skills in technology involves learning processes that include these components:

- Methods of designing and developing solutions
- Standards for selecting and using appropriate materials, tools and processes
- Experimental and design specifications for testing and evaluating solutions
- Criteria for judging the performance and impact of the solutions
- Evaluating the impact of modifying a system to improve performance.

# Academic Standards for Science and Technology

Technology Education education can be divided into three main systems that include biotechnological, informational, and physical technologies:

Biotecnological Systems	Informational Systems	Physical Systems
Bioconversion	Computer-Aided Drafting / Design (CADD)	Automation / Robotics
Bioprocessing	Drafting & Design	Computer-Aided and Integrated Manufacturing (CAM/CIM)
Environment	Desktop Publishing	Construction
Ergonomics	Electronic Communications	Electronic Circuits / Control Systems
Engineering / Design Systems	Engineering / Design Systems	Energy Systems
Research and Development	Graphic Communications	Architecture and Community Planning
	Communications Systems	Engineering / Design Systems
	Multimedia Technology	Enterprise Organization & Operation
	Networking Systems	Manufacturing
	Research and Development	Material Processes
	Video and Television Production	Research and Development
	World Wide Web Design & Publishing	Transportation

3.1. Unifying Themes	3.1.4. GRADE 4	3.1.7. GRADE 7	3.1.10. GRADE 10	3.1.12. GRADE 12
<b>Pennsylvania's public schools shall teach, challenge and support every student to realize his or her maximum potential and to acquire the knowledge and skills needed to . . .</b>				
A. Know that natural and human-made objects are made up of parts.	A. Explain the parts of a simple system and their relationship to each other. <ul style="list-style-type: none"> <li>• Identify and describe what parts make up a system.</li> <li>• Identify system parts that are natural and human-made (e.g., ball point pen, simple electrical circuits, plant anatomy).</li> <li>• Describe the purpose of analyzing systems.</li> <li>• Know that technologies include physical technology systems (e.g., construction, manufacturing, transportation), informational systems and biochemical-related systems.</li> </ul>	A. Discriminate among the concepts of systems, subsystems, feedback and control in solving technological problems. <ul style="list-style-type: none"> <li>• Identify the function of subsystems within a larger system (e.g., role of thermostat in an engine, pressure switch).</li> <li>• Explain the importance of order in a system.</li> <li>• Distinguish between system inputs, system processes and system outputs.</li> <li>• Distinguish between open loop and closed loop systems.</li> <li>• Apply systems analysis to solve problems.</li> </ul>	A. Apply concepts of systems, subsystems, feedback and control to solve complex technological problems. <ul style="list-style-type: none"> <li>• Apply knowledge of control systems concept by designing and modeling control systems that solve specific problems.</li> <li>• Apply systems analysis to predict results.</li> <li>• Analyze and describe the function, interaction and relationship among subsystems and the system itself.</li> <li>• Compare and contrast several systems that could be applied to solve a single problem.</li> <li>• Evaluate the causes of a system's inefficiency.</li> </ul>	A. Apply concepts of systems, subsystems, feedback and control to solve complex technological problems. <ul style="list-style-type: none"> <li>• Apply knowledge of control systems concept by designing and modeling control systems that solve specific problems.</li> <li>• Apply systems analysis to predict results.</li> <li>• Analyze and describe the function, interaction and relationship among subsystems and the system itself.</li> <li>• Compare and contrast several systems that could be applied to solve a single problem.</li> <li>• Evaluate the causes of a system's inefficiency.</li> </ul>
B. Know models as useful simplifications of objects or processes.	B. Describe the use of models as an application of scientific or technological concepts. <ul style="list-style-type: none"> <li>• Identify different types of models.</li> <li>• Identify and apply models as tools for prediction and insight.</li> <li>• Apply appropriate simple modeling tools and techniques.</li> <li>• Identify theories that serve as models (e.g., molecules).</li> </ul>	B. Describe the use of models as a way to predict and understand science and technology. <ul style="list-style-type: none"> <li>• Distinguish between different types of models and modeling techniques and apply their appropriate use in specific applications (e.g., kinetic gas theory, DNA).</li> <li>• Examine the advantages of using models to demonstrate processes and outcomes (e.g., blue print analysis, structural stability).</li> </ul>	B. Apply concepts of models as a method to predict and understand science and technology. <ul style="list-style-type: none"> <li>• Evaluate technological processes by collecting data and applying mathematical models (e.g., process control).</li> <li>• Apply knowledge of complex physical models to interpret data and apply mathematical models.</li> </ul>	B. Apply concepts of models as a way to predict and understand science and technology. <ul style="list-style-type: none"> <li>• Distinguish between different types of models and modeling techniques and apply their appropriate use in specific applications (e.g., kinetic gas theory, DNA).</li> <li>• Examine the advantages of using models to demonstrate processes and outcomes (e.g., blue print analysis, structural stability).</li> </ul>

# Academic Standards for Science and Technology

	<ul style="list-style-type: none"> <li>Explain systems by outlining a system's relevant parts and its purpose and/or designing a model that illustrates its function.</li> </ul>	<ul style="list-style-type: none"> <li>Apply mathematical models to science and technology.</li> </ul>	<ul style="list-style-type: none"> <li>Appraise the importance of computer models in interpreting science and technological systems.</li> </ul>
C. Illustrate patterns that regularly occur and reoccur in nature.	<ul style="list-style-type: none"> <li>Identify observable patterns (e.g., growth patterns in plants, crystal shapes in minerals, climate, structural patterns in bird feathers).</li> <li>Use knowledge of natural patterns to predict next occurrences (e.g., seasons, leaf patterns, lunar phases).</li> </ul>	<p>C. Identify patterns as repeated processes or recurring elements in science and technology.</p> <ul style="list-style-type: none"> <li>Identify different forms of patterns and use them to group and classify specific objects.</li> <li>Identify repeating structure patterns.</li> <li>Identify and describe patterns that occur in physical systems (e.g., construction, manufacturing, transportation), informational systems and biochemical-related systems.</li> </ul>	<p>C. Apply patterns as repeated processes or recurring elements in science and technology.</p> <ul style="list-style-type: none"> <li>Examine and describe recurring patterns that form the basis of biological classification, chemical periodicity, geological order and astronomical order.</li> <li>Examine and describe stationary physical patterns.</li> <li>Examine and describe physical patterns in motion.</li> </ul>
D. Know that scale is an important attribute of natural and human made objects, events and phenomena.	<ul style="list-style-type: none"> <li>Identify the use of scale as it relates to the measurement of distance, volume and mass.</li> <li>Describe scale as a ratio (e.g., pipe fittings MAP SCALES).</li> <li>Explain the importance of scale in producing models and apply it to a model.</li> </ul>	<p>D. Explain scale as a way of relating concepts and ideas to one another by some measure.</p> <ul style="list-style-type: none"> <li>Apply various applications of size and dimensions of scale to scientific, mathematical, and technological applications.</li> <li>Describe scale as a form of ratio and apply to a life situation.</li> </ul>	<p>D. Apply scale as a way of relating concepts and ideas to one another by some measure.</p> <ul style="list-style-type: none"> <li>Apply dimensional analysis and scale as a ratio.</li> <li>Convert one scale to another.</li> </ul>
E. Recognize change in natural and physical systems.	<ul style="list-style-type: none"> <li>Recognize change as fundamental to science and technology concepts.</li> <li>Examine and explain change by using time and measurement.</li> <li>Describe relative motion.</li> </ul>	<p>E. Identify change as a variable in describing natural and physical systems.</p> <ul style="list-style-type: none"> <li>Describe fundamental science and technology concepts that could solve practical problems.</li> <li>Explain how ratio is used to describe change.</li> </ul>	<p>E. Describe patterns of change in nature, physical systems and man made systems.</p> <ul style="list-style-type: none"> <li>Evaluate fundamental science and technology concepts and their development over time (e.g., DNA, cellular respiration, unified field theory, energy measurement, automation,</li> </ul>

## Academic Standards for Science and Technology

<ul style="list-style-type: none"> <li>Describe the change to objects caused by heat, cold, light or chemicals.</li> </ul>	<ul style="list-style-type: none"> <li>Describe the effect of making a change in one part of a system on the system as a whole.</li> </ul>	<ul style="list-style-type: none"> <li>cell theory, THEORY OF EVOLUTION, atomic theory, theory of relativity, Pasteur's germ theory, relativity, heliocentric theory, gas laws, feedback systems).</li> <li>Recognize that stable systems often involve underlying dynamic changes (e.g., a chemical reaction at equilibrium has molecules reforming continuously).</li> <li>Describe the effects of error in measurements.</li> <li>Describe changes to matter caused by heat, cold, light or chemicals using a rate function.</li> </ul>	<ul style="list-style-type: none"> <li>miniaturization, Copernican and Ptolemaic universe theories).</li> <li>Analyze how models, systems and technologies have changed over time (e.g., germ theory of disease, THEORY OF EVOLUTION, solar system, cause of fire).</li> <li>Explain how correlation of variables does not necessarily imply causation.</li> <li>Evaluate the patterns of change within a technology (e.g., changes in engineering in the automotive industry).</li> </ul>

DESCRIBE THE POSITIVE AND NEGATIVE EXPECTED AND UNEXPECTED EFFECTS OF SPECIFIC TECHNOLOGICAL DEVELOPMENTS.</p>

# Academic Standards for Science and Technology

## IX. GLOSSARY

<b>Allele:</b>	Any of a set of possible forms of a gene.
<b>Biochemical conversion:</b>	The changing of organic matter into other chemical forms.
<b>Biomass conversion:</b>	The changing of organic matter that has been produced by photosynthesis into useful liquid, gas or fuel.
<b>Biomedical technology:</b>	The application of health care theories to develop methods, products and tools to maintain or improve homeostasis.
<b>Biomes:</b>	A community of living organisms of a single major ecological region.
<b>Biotechnology:</b>	The ways that humans apply biological concepts to produce products and provide services.
<b>Carbon chemistry:</b>	The science of the composition, structure, properties and reactions of carbon based matter, especially of atomic and molecular systems; sometimes referred to as organic chemistry.
<b>Construction technology:</b>	The ways that humans build structures on sites.
<b>Desalination:</b>	To remove salts and other chemicals from sea or saline water.
<b>Dichotomous:</b>	Divided or dividing into two parts or classifications.
<b>Electronic communication:</b>	System for the transmission of information using electronic technology (e.g., digital cameras, cellular telephones, Internet, television, fiber optics).
<b>Embryology:</b>	The branch of biology dealing with the development of living things from fertilized egg to its developed state.
<b>Engineering:</b>	The application of scientific, physical, mechanical and mathematical principles to design processes, products and structures that improve the quality of life.

# Academic Standards for Science and Technology

**Enzyme:** A protein that increases the rate of a chemical reaction without being changed by the reaction; an organic catalyst.

**Ergonomical:** Of or relating to the design of equipment or devices to fit the human body's control, position, movement and environment.

**EVOLUTION:** A PROCESS OF CHANGE THAT EXPLAINS WHY WHAT WE SEE TODAY IS DIFFERENT FROM WHAT EXISTED IN THE PAST; IT INCLUDES CHANGES IN THE GALAXIES, STARS, SOLAR SYSTEM, EARTH AND LIFE ON EARTH. BIOLOGICAL EVOLUTION IS A CHANGE IN HEREDITARY CHARACTERISTICS OF GROUPS OF ORGANISMS OVER THE COURSE OF GENERATIONS.

**FACT:** INFORMATION THAT HAS BEEN OBJECTIVELY VERIFIED.

**Geologic hazard:** A naturally occurring or man-made condition or phenomenon that presents a risk or is a potential danger to life and property (e.g., landslides, floods, earthquakes, ground subsidence, coastal and beach erosion, faulting, dam leakage and failure, mining disasters, pollution and waste disposal, sinkholes).

**Geologic map:** A representation of a region on which is recorded earth information (e.g., the distribution, nature and age relationships of rock units and the occurrences of structural features, mineral deposits and fossil localities).

**Hydrology:** The scientific study of the properties, distribution and effects of water on the earth's surface, in the soil and underlying rocks and in the atmosphere.

**HYPOTHESIS:** AN ASSERTION SUBJECT TO VERIFICATION OR PROOF AS A PREMISE FROM WHICH A CONCLUSION IS DRAWN.

**Information technology:** The technical means that humans create to store and transmit information.

**Inquiry:** A systematic process for using knowledge and skills to acquire and apply new knowledge.

**Instructional technology:** Any mechanical aid (including computer technology) used to assist in or enhance the process of teaching and learning.

# Academic Standards for Science and Technology

**LAW:** SUMMARIZING STATEMENT OF OBSERVED EXPERIMENTAL FACTS THAT HAS BEEN TESTED MANY TIMES AND IS GENERALLY ACCEPTED AS TRUE.

## Manufacturing technology:

**Mitosis:** The ways that humans produce goods and products.

**Mitosis:** The sequential differentiation and segregation of replicated chromosomes in a cell's nucleus that precedes complete cell division.

## Model:

**Model:** A description, analogy or a representation of something that helps us understand it better (e.g., a physical model, a conceptual model, a mathematical model).

## Nova:

**Nova:** A variable star that suddenly increases in brightness to several times its normal magnitude and returns to its original appearance in a few weeks to several months or years.

## Patterns:

**Patterns:** Repeated processes that are exhibited in a wide variety of ways; identifiable recurrences of the element and/or the form.

## Physical technology:

**Physical technology:** The ways that humans construct, manufacture and transport products.

## Radioactive isotope:

**Radioactive isotope:** An atom that gives off nuclear radiation and has the same number of protons (atomic number) as another atom but a different number of neutrons.

## Relationship between science and technology:

### Scale:

**Scale:** Relates concepts and ideas to one another by some measurement (e.g., quantitative, numeral, abstract, ideological); provides a measure of size and/or incremental change.

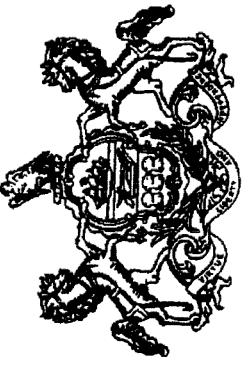

## Science:

**Science:** Search for understanding the natural world using inquiry and experimentation.

# Academic Standards for Science and Technology

<b>System:</b>	A group of related objects that work together to achieve a desired result.
<b>Open Loop system:</b>	A group of related objects that do not have feedback and cannot modify themselves.
<b>Closed Loop system:</b>	A group of related objects that have feedback and can modify themselves.
<b>Subsystem:</b>	A group of related objects that make up a larger system (e.g., automobiles have electrical systems, fuel systems).
<b>Technology education:</b>	The application of tools, materials, processes and systems to solve problems and extend human capabilities.
<b>Technological design process:</b>	Recognizing the problem, proposing a solution, implementing the solution, evaluating the solution and communicating the problem, design and solution.
<b>THEORY:</b>	SYSTEMATICALLY ORGANIZED KNOWLEDGE APPLICABLE IN A RELATIVELY WIDE VARIETY OF CIRCUMSTANCES; ESPECIALLY, A SYSTEM OF ASSUMPTIONS, ACCEPTED PRINCIPLES AND RULES OF PROCEDURE DEVISED TO ANALYZE, PREDICT OR OTHERWISE EXPLAIN THE NATURE OR BEHAVIOR OF A SPECIFIED SET OF PHENOMENA.
<b>THEORY OF EVOLUTION:</b>	A THEORY THAT THE VARIOUS TYPES OF ANIMALS AND PLANTS HAVE THEIR ORIGIN IN OTHER PREEXISTING TYPES AND THAT THE DISTINGUISHABLE DIFFERENCES ARE DUE TO MODIFICATION IN SUCCESSIVE GENERATIONS.
<b>Topographic map:</b>	A representation of a region on a sufficient scale to show detail, selected man-made and natural features of a portion of the land surface including its relief and certain physical and cultural features; the portrayal of the position, relation, size, shape and elevation of the area.
<b>Transportation systems:</b>	A group of related parts that function together to perform a major task in any form of transportation.
<b>Transportation technology:</b>	The physical ways humans move materials, goods and people.
<b>Tool:</b>	Any device used to extend human capability including computer-based tools.

<i>Factors Affecting Laws</i>		

# Academic Standards for Environment and Ecology

## XI. INTRODUCTION

This document includes Environment and Ecology standards that describe what students should know and be able to do in these areas:

- ◊ 4.1. Watersheds and Wetlands
- ◊ 4.2. Renewable and Nonrenewable Resources
- ◊ 4.3. Environmental Health
- ◊ 4.4. Agriculture and Society
- ◊ 4.5. Integrated Pest Management
- ◊ 4.6. Ecosystems and their Interactions
- ◊ 4.7. Threatened, Endangered and Extinct Species
- ◊ 4.8. Humans and the Environment
- ◊ 4.9. Environmental Laws and Regulations

The Declaration of Rights, Article I of the Pennsylvania Constitution states in Section 27: “The people have a right to clean air, pure water, and to the preservation of the natural, scenic, historic and aesthetic values of the environment. Pennsylvania’s public natural resources are the common property of all people, including generations yet to come. As trustee of these resources, the Commonwealth shall conserve and maintain them for the benefit of all the people.” To this end it is our responsibility to develop a citizenry that is aware of and concerned about the total environment and has the knowledge and skills to work toward solutions to current problems and the prevention of new ones.

Environment and Ecology is grounded in the complexity of the world we live in and our impact on its sustainability. The human interactions with the ecosystem and the results of human decisions are the main components of this academic area. Environment and Ecology examines the world with respect to the economic, cultural, political and social structure as well as natural processes and systems. This integration across systems is what sets this academic area apart from all others.

Environment and Ecology places its main emphasis in the real world. It allows students to understand, through a sound academic content base, how their everyday lives evolve around their use of the natural world and the resources it provides. As we move into a more technologically driven society, it is crucial for every student to be aware of his/her dependence on a healthy environment. The 21st century will demand a more sophisticated citizen capable of making sound decisions that will impact our natural systems forever.

These standards establish the essential elements of what students should know and be able to do at the end of grades four, seven, ten and twelve. The sequential nature of this document reflects the need for rigorous academic content that students will be expected to

## **Academic Standards for Environment and Ecology**

achieve. The standards will help students understand decision-making processes, the art of compromise and problem solving skills. The document reinforces all areas across the grade levels with increasing degrees of difficulty as the students mature intellectually.

Environment and Ecology is a very engaging academic area that captivates students' innate interests in their surroundings of the natural and built environment. The skills and knowledge that are addressed in this area of study will serve as tools for student participation in a democratic world of constantly evolving issues and concerns. As they achieve these standards, students will become aware of the role they play in the community in reaching decisions related to the environment.

The study of Environment and Ecology will allow students to be active participants and problem solvers in real issues that affect them, their homes, schools and communities.

A glossary is included to assist the reader in understanding terminology contained in the standards.

# Academic Standards for Environment and Ecology

4.1. Watersheds and Wetlands	4.1.4. GRADE 4	4.1.7. GRADE 7	4.1.10. GRADE 10	4.1.12. GRADE 12
<b>Pennsylvania's public schools shall teach, challenge and support every student to realize his or her maximum potential and to acquire the knowledge and skills needed to:</b>				
A. Identify various types of water environments. <ul style="list-style-type: none"> <li>• Identify the lotic system (e.g., creeks, rivers, streams).</li> <li>• Identify the lentic system (e.g., ponds, lakes, swamps).</li> </ul> B. Explain the differences between moving and still water. <ul style="list-style-type: none"> <li>• Explain why water moves or does not move.</li> <li>• Identify types of precipitation.</li> </ul>	A. Explain the role of the water cycle within a watershed. <ul style="list-style-type: none"> <li>• Explain the water cycle.</li> <li>• Explain the water cycle as it relates to a watershed.</li> </ul> B. Understand the role of the watershed. <ul style="list-style-type: none"> <li>• Identify and explain what determines the boundaries of a watershed.</li> <li>• Explain how water enters a watershed.</li> <li>• Explain factors that affect water quality and flow through a watershed.</li> </ul>	A. Describe changes that occur from a stream's origin to its final outflow. <ul style="list-style-type: none"> <li>• Identify Pennsylvania's major watersheds and their related river systems.</li> <li>• Describe changes by tracing a specific river's origin back to its headwaters including its major tributaries.</li> </ul> B. Explain the relationship among landforms, vegetation and the amount and speed of water. <ul style="list-style-type: none"> <li>• Analyze a stream's physical characteristics.</li> <li>• Describe how topography influences streams.</li> <li>• Explain the influence of mountains on precipitation.</li> <li>• Explain how vegetation affects storm water runoff.</li> </ul>	A. Categorize stream order in a watershed. <ul style="list-style-type: none"> <li>• Explain the concept of stream order.</li> <li>• Identify the order of watercourses within a major river's watershed.</li> <li>• Compare and contrast the physical differences found in the stream continuum from headwater to mouth.</li> </ul> B. Explain the relationships that exist within watersheds in the United States. <ul style="list-style-type: none"> <li>• Understand that various ecosystems may be contained in a watershed.</li> <li>• Examine and describe the ecosystems contained within a specific watershed.</li> <li>• Identify and describe the major watersheds in the United States.</li> </ul>	A. Describe changes that occur from a stream's origin to its final outflow. <ul style="list-style-type: none"> <li>• Identify Pennsylvania's major watersheds and their related river systems.</li> <li>• Describe changes by tracing a specific river's origin back to its headwaters including its major tributaries.</li> </ul> B. Explain the relationship among landforms, vegetation and the amount and speed of water. <ul style="list-style-type: none"> <li>• Analyze a stream's physical characteristics.</li> <li>• Describe how topography influences streams.</li> <li>• Explain the influence of mountains on precipitation.</li> <li>• Explain how vegetation affects storm water runoff.</li> <li>• Delineate the boundaries of a watershed.</li> <li>• Describe factors that affect the quality of groundwater.</li> <li>• Explain how the speed of water and vegetation cover relates to erosion.</li> </ul>

# Academic Standards for Environment and Ecology

<p>C. Identify living things found in water environments.</p> <ul style="list-style-type: none"> <li>• Identify fish, insects and amphibians that are found in fresh water.</li> <li>• Identify plants found in fresh water.</li> </ul>	<p>C. Explain the effects of water on the life of organisms in a watershed.</p> <ul style="list-style-type: none"> <li>• Explain how water is necessary for all life.</li> <li>• Explain how the physical components of aquatic systems influence the organisms that live there in terms of size, shape and physical adaptations.</li> <li>• Describe the life cycle of organisms that depend on water.</li> <li>• Identify organisms that have aquatic stages of life and describe those stages.</li> </ul>	<p>C. Describe the physical characteristics of a stream and determine the types of organisms found in aquatic environments.</p> <ul style="list-style-type: none"> <li>• Describe and explain the physical factors that affect a stream and the organisms living there.</li> <li>• Identify terrestrial and aquatic organisms that live in a watershed.</li> <li>• Categorize aquatic organisms found in a watershed continuum from headwater to mouth (e.g., shredder, predator, decomposer).</li> <li>• Identify the types of organisms that would live in a stream based on the stream's physical characteristics.</li> <li>• Explain the habitat needs of specific aquatic organisms.</li> </ul> <p>D. Explain and describe characteristics of a wetland.</p> <ul style="list-style-type: none"> <li>• Identify specific characteristics of wetland plants and soils.</li> <li>• Recognize the common types of plants and animals.</li> <li>• Describe different types of wetlands.</li> <li>• Describe the different functions of a wetland.</li> </ul>
---	--	--

<p>D. Identify a wetland and the plants and animals found there.</p> <ul style="list-style-type: none"> <li>• Identify different kinds of wetlands.</li> <li>• Identify plants and animals found in wetlands.</li> <li>• Explain wetlands as habitats for plants and animals.</li> </ul>	<p>C. Analyze the parameters of a watershed.</p> <ul style="list-style-type: none"> <li>• Interpret physical, chemical and biological data as a means of assessing the environmental quality of a watershed.</li> <li>• Apply appropriate techniques in the analysis of a watershed (e.g., water quality, biological diversity, erosion, sedimentation).</li> </ul> <p>D. Analyze the complex and diverse ecosystems of wetlands.</p> <ul style="list-style-type: none"> <li>• Explain the functions of habitat, nutrient production, migration stopover and groundwater recharge as it relates to wetlands.</li> <li>• Explain the dynamics of a wetland ecosystem.</li> <li>• Describe and analyze different types of wetlands.</li> </ul> <p>D. Describe the multiple functions of wetlands.</p> <ul style="list-style-type: none"> <li>• Describe wetlands in terms of their effects (e.g., habitat, flood, buffer zones, prevention areas, nurseries, food production areas).</li> <li>• Explain how a wetland influences water quality, wildlife and water retention.</li> <li>• Analyze wetlands through their indicators (e.g., soils, plants, hydrology).</li> </ul>
--	---

## Academic Standards for Environment and Ecology

		E. Evaluate the trade-offs, costs and benefits of conserving watersheds and wetlands.
	E. Identify and describe natural and human events on watersheds and wetlands.	E. Evaluate the effects of natural events on watershed and wetlands.
E. Recognize the impact of watersheds and wetlands on animals and plants. <ul style="list-style-type: none"><li>• Explain the role of watersheds in everyday life.</li><li>• Identify the role of watersheds and wetlands for plants and animals.</li></ul>	<ul style="list-style-type: none"><li>E. Describe the impact of watersheds and wetlands on people.<ul style="list-style-type: none"><li>• Explain the impact of watersheds and wetlands in flood control, wildlife habitats and pollution abatement.</li><li>• Explain the influence of flooding on wetlands.</li></ul></li></ul>	<ul style="list-style-type: none"><li>• Evaluate the effects of natural events on watersheds and wetlands.</li><li>• Evaluate the effects of human activities on watersheds and wetlands.</li></ul>

## 4.7. Threatened, Endangered and Extinct Species

4.7.4. GRADE 4	4.7.7. GRADE 7	4.7.10. GRADE 10	4.7.12. GRADE 12
<p><b>Pennsylvania's public schools shall teach, challenge and support every student to realize his or her maximum potential and to acquire the knowledge and skills needed to:</b></p>			
<p>A. Identify differences in living things.</p> <ul style="list-style-type: none"> <li>Explain why plants and animals are different colors, shapes and sizes and how these differences relate to their survival.</li> <li>Identify characteristics that living things inherit from their parents.</li> <li>Explain why each of the four elements in a habitat is essential for survival.</li> <li>Identify local plants or animals and describe their habitat.</li> </ul> <p>B. Know that adaptations are important for survival.</p> <ul style="list-style-type: none"> <li>Explain how specific adaptations can help a living organism to survive.</li> <li>Explain what happens to a living thing when its food, water, shelter or space is changed.</li> </ul>	<p>A. Describe diversity of plants and animals in ecosystems.</p> <ul style="list-style-type: none"> <li>Select an ecosystem and describe different plants and animals that live there.</li> <li>Identify adaptations in plants and animals.</li> <li>Recognize that adaptations are developed over long periods of time and are passed on from one generation to the next.</li> <li>Understand levels of ecosystem organization (e.g., individuals, populations, species).</li> </ul> <p>B. Explain how species of living organisms adapt to their environment.</p> <ul style="list-style-type: none"> <li>Explain the role of individual variations in natural selection.</li> <li>Explain how an adaptation is an inherited structure or behavior that helps an organism survive and reproduce.</li> <li>Describe how a particular trait may be selected over time and account for a species' adaptation.</li> </ul>	<p>A. Explain the significance of diversity in ecosystems.</p> <ul style="list-style-type: none"> <li>Explain the role that specific organisms have in their ecosystem.</li> <li>Identify a species and explain what effects its increase or decline might have on the ecosystem.</li> <li>Identify a species and explain how its adaptations are related to its niche in the environment.</li> </ul> <p>B. Explain how structure, function and behavior of plants and animals affect their ability to survive.</p> <ul style="list-style-type: none"> <li>Describe an organism's adaptations for survival in its habitat.</li> <li>Compare adaptations among species.</li> </ul> <p>C. Analyze biological diversity as it relates to the stability of an ecosystem.</p> <ul style="list-style-type: none"> <li>Examine and explain what happens to an ecosystem as biological diversity changes.</li> <li>Explain the relationship between species' loss and bio-diversity.</li> <li>Examine and explain how a specialized interaction between two species may affect the survival of both species.</li> </ul>	<p>A. Analyze biological diversity as it relates to the stability of an ecosystem.</p> <ul style="list-style-type: none"> <li>Examine and explain what happens to an ecosystem as biological diversity changes.</li> <li>Explain the relationship between species' loss and bio-diversity.</li> <li>Examine and explain how a specialized interaction between two species may affect the survival of both species.</li> </ul> <p>B. Examine the effects of extinction, both natural and human caused, on the environment.</p> <ul style="list-style-type: none"> <li>Predict how human or natural action can produce change to which organisms cannot adapt.</li> <li>Identify species that became extinct through natural causes and explain how that occurred.</li> <li>Identify a species that became extinct due to human actions and explain what occurred.</li> </ul> <p>D. Explain how species of living organisms adapt to their environment.</p> <ul style="list-style-type: none"> <li>Explain the role of individual variations in natural selection.</li> <li>Explain how an adaptation is an inherited structure or behavior that helps an organism survive and reproduce.</li> <li>Describe how a particular trait may be selected over time and account for a species' adaptation.</li> <li>Compare and contrast animals and plants that have very specific survival requirements with those that have more general requirements</li> </ul>

## Academic Standards for Environment and Ecology

<p>C. Define and understand extinction.</p> <ul style="list-style-type: none"> <li>Identify plants and animals that are extinct.</li> <li>Explain why some plants and animals are extinct.</li> <li>Know that there are local and state laws regarding plants and animals.</li> </ul>	<p>C. Explain natural or human actions in relation to the loss of species.</p> <ul style="list-style-type: none"> <li>Identify natural or human impacts that cause habitat loss.</li> <li>Explain how habitat loss can affect the interaction among species and the population of a species.</li> <li>Analyze and explain the changes in an animal population over time.</li> <li>Explain how a habitat management practice affects a population.</li> <li>Explain the differences among threatened, endangered and extinct species.</li> <li>Identify Pennsylvania plants and animals that are on the threatened or endangered list.</li> <li>Describe state laws passed regarding threatened and endangered species in Pennsylvania.</li> <li>Explain why one species may be more susceptible to becoming endangered than another species.</li> </ul>	<p>C. Identify and explain why adaptations can lead to specialization.</p> <ul style="list-style-type: none"> <li>Explain factors that could lead to a species' increase or decrease.</li> <li>Explain how management practices may influence the success of specific species.</li> <li>Identify and explain criteria used by scientists for categorizing organisms as threatened, endangered or extinct.</li> <li>Explain the differences among threatened, endangered and extinct species.</li> <li>Identify Pennsylvania plants and animals that are on the threatened or endangered list.</li> <li>Describe state laws passed regarding threatened and endangered species in Pennsylvania.</li> <li>Explain why one species may be more susceptible to becoming endangered than another species.</li> </ul>	<p>C. Analyze the effects of threatened, endangered or extinct species on human and natural systems.</p> <ul style="list-style-type: none"> <li>Identify and explain how a species' increase, decline or elimination affects the ecosystem and/or human social, cultural and economic structures.</li> <li>Explain why natural populations do not remain constant.</li> <li>Analyze management strategies regarding threatened or endangered species.</li> <li>Identify laws, agreements or treaties at national or international levels regarding threatened or endangered species.</li> <li>Analyze the role of zoos and wildlife preserves on species that have been identified as threatened or endangered.</li> <li>Examine the influence of wildlife management in preserving different species in Pennsylvania (e.g., bobcat, elk, bald eagle).</li> </ul>

# Academic Standards for Environment and Ecology

4.8.4. GRADE 4	4.8.7. GRADE 7	4.8.10. GRADE 10	4.8.12. GRADE 12
<p><b>Pennsylvania's Public schools shall teach, challenge and support every student to realize his or her maximum potential and to acquire the knowledge and skills needed to:</b></p>			
<p>A. Identify the biological requirements of humans.</p> <ul style="list-style-type: none"> <li>• Explain how a dynamically changing environment provides for sustainability of living systems.</li> <li>• Identify several ways that people use natural resources.</li> </ul> <p>B. Know that environmental conditions influence where and how people live.</p> <ul style="list-style-type: none"> <li>• Identify how regional natural resources influence what people use.</li> <li>• Explain the influence of climate on how and where people live.</li> </ul>	<p>A. Describe how the development of civilization relates to the environment.</p> <ul style="list-style-type: none"> <li>• Explain how people use natural resources in their environment.</li> <li>• Locate and identify natural resources in different parts of the world.</li> <li>• Compare and contrast how people use natural resources throughout the world.</li> </ul> <p>B. Explain how people use natural resources.</p> <ul style="list-style-type: none"> <li>• Describe how natural resources are used for survival.</li> <li>• Explain how natural resources and technological changes have affected the development of civilizations.</li> <li>• Explain how climate and extreme weather events (e.g., drought, flood) influence people's lives.</li> </ul>	<p>A. Analyze how society's needs relate to the sustainability of natural resources.</p> <ul style="list-style-type: none"> <li>• Explain why some societies have been unable to meet their natural resource needs.</li> <li>• Compare and contrast the use of natural resources and the environmental conditions in several countries.</li> <li>• Describe how uses of natural resources impact sustainability.</li> </ul> <p>B. Analyze the relationship between the use of natural resources and sustaining our society.</p> <ul style="list-style-type: none"> <li>• Explain the role of natural resources in sustaining society.</li> <li>• Analyze the effects of a natural resource's availability on a community or region.</li> </ul>	<p>A. Explain how technology has influenced the sustainability of natural resources over time.</p> <ul style="list-style-type: none"> <li>• Describe how technology has changed the use of natural resources by business and industry.</li> <li>• Analyze the effect of natural resource conservation on a product over time (e.g., automobile manufacturing, aluminum can recycling, paper products).</li> </ul> <p>B. Analyze technology's role on natural resource sustainability.</p> <ul style="list-style-type: none"> <li>• Explain how technology has decreased the use of raw natural resources.</li> <li>• Explain how technology has impacted the efficiency of the use of natural resources.</li> </ul> <p><i>Analyze how technology has impacted agricultural productivity.</i></p> <ul style="list-style-type: none"> <li>• Analyze the role of technology in the reduction of pollution.</li> </ul>

# Academic Standards for Environment and Ecology

C. Explain how human activities may change the environment.	<ul style="list-style-type: none"> <li>• Identify everyday human activities and how they affect the environment.</li> <li>• Identify examples of how human activities within a community affect the natural environment.</li> </ul>	<p>C. Explain how human activities may affect local, regional and national environments.</p> <ul style="list-style-type: none"> <li>• Describe what effect consumption and related generation of wastes have on the environment.</li> <li>• Explain how a particular human activity has changed the local area over the years.</li> </ul>	<p>C. Analyze how human activities may cause changes in an ecosystem.</p> <ul style="list-style-type: none"> <li>• Analyze and evaluate changes in the environment that are the result of human activities.</li> <li>• Compare and contrast the environmental effects of different industrial strategies (e.g., energy generation, transportation, logging, mining, agriculture).</li> </ul>
D. Know the importance of natural resources in daily life.	<ul style="list-style-type: none"> <li>• Identify items used in daily life that come from natural resources.</li> <li>• Identify ways to conserve our natural resources.</li> <li>• Identify major land uses in the community.</li> </ul>	<p>D. Explain the importance of maintaining the natural resources at the local, state and national levels.</p> <ul style="list-style-type: none"> <li>• Explain how human activities and natural events have affected ecosystems.</li> <li>• Explain how conservation practices have influenced ecosystems.</li> <li>• Define the roles of Pennsylvania agencies that deal with natural resources.</li> </ul>	<p>D. Explain how the concept of supply and demand affects the environment.</p> <ul style="list-style-type: none"> <li>• Identify natural resources for which societal demands have been increasing.</li> <li>• Identify specific resources for which human consumption has resulted in scarcity of supply (e.g., buffalo, lobsters).</li> <li>• Describe the relationship between population density and resource use and management.</li> </ul>

# Academic Standards for Environment and Ecology

## 4.9. Environmental Laws and Regulations

4.9.4. GRADE 4	4.9.7. GRADE 7	4.9.10. GRADE 10	4.9.12. GRADE 12
<p><b>Pennsylvania's public schools shall teach, challenge and support every student to realize his or her maximum potential and to acquire the knowledge and skills needed to:</b></p>			
<p>A. Know that there are laws and regulations for the environment.</p> <ul style="list-style-type: none"> <li>• Identify local and state laws and regulations regarding the environment.</li> <li>• Explain how the recycling law impacts the school and home.</li> <li>• Identify and describe the role of a local or state agency that deals with environmental laws and regulations.</li> </ul>	<p>A. Explain the role of environmental laws and regulations.</p> <ul style="list-style-type: none"> <li>• Identify and explain environmental laws and regulations (e.g., Clean Air Act, Clean Water Act, Recycling and Waste Reduction Act, Act 26 on Agricultural Education).</li> <li>• Explain the role of local and state agencies in enforcing environmental laws and regulations (e.g., Department of Environmental Protection, Department of Agriculture, Game Commission).</li> </ul>	<p>A. Explain why environmental laws and regulations are developed and enacted.</p> <ul style="list-style-type: none"> <li>• Explain the positive and negative impacts associated with passing environmental laws and regulations.</li> <li>• Understand conflicting rights of property owners and environmental laws and regulations.</li> <li>• Analyze the roles that local, state and federal governments play in the development and enforcement of environmental laws.</li> <li>• Identify local and state environmental regulations and their impact on environmental health.</li> </ul>	<p>A. Analyze environmental laws and regulations as they relate to environmental issues.</p> <ul style="list-style-type: none"> <li>• Analyze and explain how issues lead to environmental law or regulation (e.g., underground storage tanks, regulation of water discharges, hazardous, solid and liquid industrial waste, endangered species).</li> <li>• Compare and contrast environmental laws and regulations that may have a positive or negative impact on the environment and the economy.</li> <li>• Research and describe the effects of an environmental law or regulation and how it has impacted the environment.</li> </ul>

# Academic Standards for Environment and Ecology

## XII. GLOSSARY

<b>Abiotic:</b>	A nonliving factor or element (e.g., light, water, heat, rock, energy, mineral).
<b>Acid deposition:</b>	Precipitation with a pH less than 5.6 that forms in the atmosphere when certain pollutants mix with water vapor.
<b>Biological diversity:</b>	The variety and complexity of species present and interacting in an ecosystem and the relative abundance of each.
<b>Biotic:</b>	An environmental factor related to or produced by living organisms.
<b>Closing the loop:</b>	A link in the circular chain of recycling events that promotes the use of products made with recycled materials.
<b>COMMODITIES:</b>	ECONOMIC GOODS OR PRODUCTS BEFORE THEY ARE PROCESSED AND/OR GIVEN A BRAND NAME, SUCH AS A PRODUCT OF AGRICULTURE.
<b>Composting:</b>	The process of mixing decaying leaves, manure and other nutritive matter to improve and fertilize soil.
<b>CONSUMER:</b>	1) THOSE ORGANISMS THAT OBTAIN ENERGY BY FEEDING ON OTHER ORGANISMS AND THEIR REMAINS. 2) A PERSON BUYING GOODS OR SERVICES FOR PERSONAL NEEDS OR TO USE IN THE PRODUCTION OF OTHER GOODS FOR RESALE.
<b>DECOMPOSER:</b>	AN ORGANISM, OFTEN MICROSCOPIC IN SIZE, THAT OBTAINS NUTRIENTS BY CONSUMING DEAD ORGANIC MATTER, THEREBY MAKING NUTRIENTS ACCESSIBLE TO OTHER ORGANISMS; EXAMPLES OF DECOMPOSERS INCLUDE FUNGI, SCAVENGERS, RODENTS AND OTHER ANIMALS.
<b>Delineate:</b>	To trace the outline; to draw; to sketch; to depict or picture.
<b>Ecosystem:</b>	A community of living organisms and their interrelated physical and chemical environment.
<b>ENDANGERED SPECIES:</b>	A SPECIES THAT IS IN DANGER OF EXTINCTION THROUGHOUT ALL OR A SIGNIFICANT PORTION OF ITS RANGE.

# Academic Standards for Environment and Ecology

<b>ENVIRONMENT:</b>	THE TOTAL OF THE SURROUNDINGS (AIR, WATER, SOIL, VEGETATION, PEOPLE, WILDLIFE) INFLUENCING EACH LIVING BEING'S EXISTENCE, INCLUDING PHYSICAL, BIOLOGICAL AND ALL OTHER FACTORS; THE SURROUNDINGS OF A PLANT OR ANIMAL, INCLUDING OTHER PLANTS OR ANIMALS, CLIMATE AND LOCATION.
<b>Equilibrium:</b>	The ability of an ecosystem to maintain stability among its biological resources (e.g., forest, fisheries, crops) so that there is a steady optimum yield.
<b>EXTINCTION:</b>	THE COMPLETE ELIMINATION OF A SPECIES FROM THE EARTH.
<b>Groundwater:</b>	Water that infiltrates the soil and is located in underground reservoirs called aquifers.
<b>HAZARDOUS WASTE:</b>	A SOLID THAT, BECAUSE OF ITS QUANTITY OR CONCENTRATION OR ITS PHYSICAL, CHEMICAL OR INFECTIOUS CHARACTERISTICS, MAY CAUSE OR POSE A SUBSTANTIAL PRESENT OR POTENTIAL HAZARD TO HUMAN HEALTH OR THE ENVIRONMENT WHEN IMPROPERLY TREATED, STORED, TRANSPORTED OR DISPOSED OF, OR OTHERWISE MANAGED.
<b>Homeostasis:</b>	The tendency for a system by resisting change to remain in a state of equilibrium.
<b>Incinerating:</b>	Burning to ashes; reducing to ashes.
<b>Integrated pest management:</b>	A variety of pest control methods that include repairs, traps, bait, poison, etc. to eliminate pests.
<b>Lentic:</b>	Relating to or living in still water
<b>Lotic:</b>	Relating to or living in actively moving water.
<b>Mitigation:</b>	The policy of constructing or creating man-made habitats, such as wetlands, to replace those lost to development.
<b>Niche (ecological):</b>	The role played by an organism in an ecosystem; its food preferences, requirements for shelter, special behaviors and the timing of its activities (e.g., nocturnal, diurnal), interaction with other organisms and its habitat.
<b>Nonpoint source</b>	

# Academic Standards for Environment and Ecology

<b>Pollution:</b>	Contamination that originates from many locations that all discharge into a location (e.g., a lake, stream, land area).
<b>Nonrenewable resources:</b>	Substances (e.g., oil, gas, coal, copper, gold) that, once used, cannot be replaced in this geological age.
<b>Point source pollution:</b>	Pollutants discharged from a single identifiable location (e.g., pipes, ditches, channels, sewers, tunnels, containers of various types).
<b>Pest:</b>	A label applied to an organism when it is in competition with humans for some resource.
<b>Recycling:</b>	Collecting and reprocessing a resource or product to make into new products.
<b>REGULATION:</b>	A RULE OR ORDER ISSUED BY AN EXECUTIVE AUTHORITY OR REGULATORY AGENCY OF A GOVERNMENT AND HAVING THE FORCE OF LAW.
<b>Renewable:</b>	A naturally occurring raw material or form of energy that will be replenished through natural ecological cycles or sound management practices (e.g., the sun, wind, water, trees).
<b>Risk management:</b>	A strategy developed to reduce or control the chance of harm or loss to one's health or life; THE PROCESS OF IDENTIFYING, EVALUATING, SELECTING AND IMPLEMENTING ACTIONS TO REDUCE RISK TO HUMAN HEALTH AND TO ECOSYSTEMS.
<b>SHREDDER:</b>	THROUGH CHEWING AND/OR GRINDING, MICROORGANISMS FEED ON NON-WOODY COARSE PARTICULATE MATTER, PRIMARILY LEAVES.
<b>Stream order:</b>	Energy and nutrient flow that increases as water moves toward the oceans (e.g., the smallest stream (primary) that ends when rivers flow into oceans).
<b>Succession:</b>	The series of changes that occur in an ecosystem with the passing of time.
<b>Sustainability:</b>	The ability to keep in existence or maintain. A sustainable ecosystem is one that can be maintained.
<b>Trophic levels:</b>	The role of an organism in nutrient and energy flow within an ecosystem (e.g., herbivore, carnivore, decomposer).
<b>Waste Stream:</b>	The flow of (waste) materials from generation, collection and separation to disposal.
<b>Watershed:</b>	The land area from which surface runoff drains into a stream, channel, lake, reservoir or other body of water; also called a drainage basin.

## **Academic Standards for Environment and Ecology**

**Wetlands:**

Lands where water saturation is the dominant factor determining the nature of the soil development and the plant and animal communities (e.g., sloughs, estuaries, marshes).

## Commonwealth of Pennsylvania STATE BOARD OF EDUCATION

October 12, 2001

Mr. Robert E. Nyce  
Executive Director  
Independent Regulatory Review Commission  
14th Floor  
333 Market Street  
Harrisburg, PA 17126

Dear Mr. Nyce:

Enclosed is a copy of the final-form of State Board of Education regulations 22 Pa. Code, Chapter 4, Appendix B (Academic Standards for Science and Technology and Environment and Ecology) (#6-273) for review by the Commission pursuant to the provisions of section 5(c) of the Regulatory Review Act. The act provides that the Commission shall approve or disapprove final-form regulations within 10 days of the close of the Committee review period or at its next scheduled meeting.

The State Board of Education will provide the Commission with any assistance it requires to facilitate a thorough review of these final-form regulations.

Please let me know if there is anything that you need.

Sincerely,

A handwritten signature in black ink that reads "Peter H. Garland".

Peter H. Garland  
Executive Director
