(9) State the statutory authority for the regu	lation and any rele	vant state or federal c	ourt decisions.
		van suit or recerdi e	
66 Pa. C.S. §§501 and 2807(e).			

(10) Is the regulation mandated by any federal or state law or court order, or federal regulation? If yes, cite the specific law, case or regulation, and any deadlines for action.

Yes, this regulation is mandated by 66 Pa. C.S. \$2807(e)(2). It must be enacted by the conclusion of the restructuring transition period, December 31, 2010.

(11) Explain the compelling public interest that justifies the regulation. What is the problem it addresses?

As noted above, this regulation is mandated by law. The public interest is served by the Commission executing the provisions of the Public Utility Code.

(12) State the public health, safety, environmental or general welfare risks associated with nonregulation.

The failure to timely adopt regulations will impair the reliable provision of default electric service to retail customers at prevailing market prices, would hinder the continued formation of the competitive market place, and would frustrate the General Assembly's declarations of policy found at 66 Pa. C.S. §2802.

(13) Describe who will benefit from the regulation. (Quantify the benefits as completely as possible and approximate the number of people who will benefit.)

Pennsylvania's electric retail customers, both business and residential, will benefit from a regulatory framework that ensures the reliable provision of electrity at prevailing market prices. Electric utilities will benefit from the regulatory certainty that will result through the adoption of final regulations. Accordingly, this rulemaking affects all citizens of the Commonwealth of Pennsylvania.

(14) Describe who will be adversely affected by the regulation. (Quantify the adverse effects as completely as possible and approximate the number of people who will be adversely affected.)

No person or entity will be adversely affected by this regulation.

(15) List the persons, groups or entities that will be required to comply with the regulation. (Approximate the number of people who will be required to comply.)

All regulated electric distribution companies (electric utilities) and licensed electric generation suppliers.

(16) Describe the communications with and input from the public in the development and drafting of the regulation. List the persons and/or groups who were involved, if applicable.

The Commission held public hearings on this matter from April through June of 2004. Participants included all Pennsylvania electric utilities, licensed electric generation suppliers, the Pennsylvania Office of Consumer Advocate, the Pennsylvania Office of Small Business Advocate, the Federal Energy Regulatory Commission, PJM Interconnection, LLC, the New Jersey and Maryland public utility commissions, and various other consumer and business interest groups. These parties had the opportunity to offer testimony and file comments and reply comments during this proceeding.

(17) Provide a specific estimate of the costs and/or savings to the regulated community associated with compliance, including any legal, accounting or consulting procedures which may be required.

No specific estimate is available. The default service obligation is a continuation of the obligation to serve customers that electric utilities have always had. This obligation has always been associated with legal, accounting and related costs. Accordingly, the costs under the new regulatory framework will be similar, though the administrative review process and legal standard for review has changed somewhat. Default service providers "shall recover fully all reasonable costs" associated with this service. 66 Pa. C.S. $\S2807(e)(3)$. The proposed regulations include specific mechanisms for cost recovery.

(18) Provide a specific estimate of the costs and/or savings to local governments associated with compliance, including any legal, accounting or consulting procedures which may be required.

This regulation does not apply to local governments and accordingly there are no compliance costs or savings.

(19) Provide a specific estimate of the costs and/or savings to state government associated with the implementation of the regulation, including any legal, accounting, or consulting procedures which may be required.

No specific estimate is available. Commission staff will be responsible for enforcing these regulations. Other agencies, such as the Office of Consumer Advocate and Office of Small Business Advocate, may also monitor regulated electric utilities compliance with these regulations. Future proceedings pertaining to default service will substitute for past electric utility generation base rate proceedings previously adjudicated by the Commission. The level of staff, time and resources devoted to these future proceedings regarding generation rates will be similar to past proceedings that were adjudicated by the Commission.

(20) In the table below, provide an estimate of the fiscal savings and costs associated with implementation and compliance for the regulated community, local government, and state government for the current year and five subsequent years.

	Current FY Year	FY +1 Year	FY +2 Year	FY +3 Year	FY +4 Year	FY +5 Year

(24) Are there any provisions that are more stringent than federal standards? If yes, identify the specific provisions and the compelling Pennsylvania interest that demands stronger regulation.

As this matter involves retail electric service, it is fully within state jurisdiction. The federal government has jurisdiction over wholesale electric service.

(25) How does this regulation compare with those of other states? Will the regulation put Pennsylvania at a competitive disadvantage with other states?

Less than half the states have opened their retail electricity markets to competition. The Commission finds that the regulatory framework it has proposed furthers the General Assembly's policy declaration that retail competition will protect "this Commonwealth's ability to compete in the national and international marketplace for industry and jobs." 66 Pa. C.S. §2802(7).

(26) Will the regulation affect existing or proposed regulations of the promulgating agency or other state agencies? If yes, explain and provide specific citations.

This rulemaking amends the the language of the following sections of the Commission's regulations to ensure consistent terminology: 52 Pa. Code §§54.4; 54.5; 54.6; 54.31; 54.32; 54.41; 57.178. The new sections proposed through this rulemaking are 54.123 and 54.181-189. No regulations of other state agencies are affected.

(27) Will any public hearings or informational meetings be scheduled? Please provide the dates, times, and locations, if available.

None are currently scheduled. Should these regulations be adopted, the Commission will likely hold technical conferences to assist regulated entities in their compliance.

(28) Will the regulation change existing reporting, record keeping, or other paperwork requirements? Describe the changes and attach copies of forms or reports which will be required as a result of implementation, if available.

The regulations require the filing of default service implementation plans by the default service provider with the Commission prior to each term of service. As providers are being afforded flexibility in managing this oblgation, no standardized plan is required. No other standardized forms or reports are contemplated by this regulation at this time.

(29) Please list any special provisions which have been developed to meet the particular needs of affected groups or persons including, but not limited to, minorities, elderly, small businesses, and farmers.

These regulations require the default service provider to continue existing universal service programs, or to implement similar programs, which benefit low income retail customers

(30) What is the anticipated effective date of the regulation; the date by which compliance with the regulation will be required; and the date by which any required permits, licenses or other approvals must be obtained?

The regulation will become effective upon publication in the Pennsylvania Bulletin following review and approval by the standing committees and the Independent Regulatory Review Commission.

(31) Provide the schedule for continual review of the regulation.

The regulation will be reviewed on an ongoing basis.

L-00040169/57-237 Final Rulemaking Electric Distribution Companies' Obligation to Serve Retail Customers at the Conclusion of the Transition Period Pursuant to 66 Pa. C.S. §2807(e)(2) 52 Pa. Code, Chapter 54

The Pennsylvania Public Utility Commission on May 10, 2007, adopted a final rulemaking order defining the obligation of electric distribution companies to serve retail customers at the conclusion of their respective transition periods. The contact persons are Robert Bennett, Bureau of Fixed Utility Services, 717 787-5553 and Shane Rooney, Law Bureau, 787-2871.

EXECUTIVE SUMMARY

L-00040169/57-237

Final Rulemaking Re: Electric Distribution Companies' Obligation to Serve Retail Customers at the Conclusion of the Transition Period Pursuant To 66 Pa. C.S. §2807(e)(2) 52 Pa. Code Chapters 54 and 57

Section 2807(e)(2) of the Public Utility Code, 66 Pa. C.S. §2807(e)(2), requires the Commission to promulgate regulations that define the obligation of electric distribution companies to serve retail customers at the end of the restructuring transition period. Section 2807(e) mandates that all customers who do not receive generation service through the competitive retail market must be provided generation service by either their incumbent electric distribution company or a Commission approved alternative provider. Generation supply provided to these customers must be acquired at prevailing market prices, and the provider may fully recover all reasonable costs associated with this service. On December 16, 2004, the Commission issued a Notice of Proposed Rulemaking that formally commenced this rulemaking process, which included additions to and revisions of Chapters 54 and 57 of the Commission's regulations. The Commission sought comments from all interested parties on the issues addressed in the proposed regulations.

The Commission identifies the generation service provided to customers under Section 2807 as "default service." The regulations require electric distribution companies to act as the default service provider to all retail customers, unless an alternative provider is approved by the Commission. Default service providers must continue to comply with all existing regulations, statutes and orders pertaining to public utility service to the extent they are not modified by this subchapter. In order to meet the "prevailing market price" legal standard, the default service provider must procure all generation supply through a Commission approved competitive bidding process. The regulations provide for a two phase procedure for complying with the obligation. Providers must first submit default service implementation plans for the Commission to review, which would include a proposed competitive procurement process. Upon approval of the implementation plan by the Commission, the default service provider will execute its procurement process. The prices that result from compliance with the procurement process will be deemed the "prevailing market price" for default service.

The regulations also identify the mechanisms by which the default service provider will recover its costs, the rules governing customer migration to and from default service, and provide new competitive safeguards to ensure the reliable provision of default service.

The contact person for this rulemaking is Shane Rooney, Law Bureau, 717 787-2871.

PENNSYLVANIA PUBLIC UTILITY COMMISSION Harrisburg, PA 17105-3265

Rulemaking Re Electric Distribution Companies' Obligation to Serve Retail Customers at the Conclusion of the Transition Period Pursuant To 66 Pa.C.S. § 2807(e)(2)

Docket No. L-00040169

FINAL RULEMAKING ORDER

BY THE COMMISSION:

The Electricity Generation Customer Choice and Competition Act (the "Competition Act"), 66 Pa.C.S. §§ 2801-2812, requires the Commission to promulgate regulations defining the obligation of electric distribution companies ("EDC") to serve retail electric customers at the conclusion of the restructuring transition periods. On December 16, 2004, the Commission issued proposed regulations for public comment on this subject. On February 8, 2007, the Commission issued an advance notice of final rulemaking ("ANOFR") for public comment. The Commission has completed its review of the comments to the ANOFR, and today issues a final form default service regulation. At separate dockets, we are issuing a final policy statement on default service and retail

electric markets, and identifying other policies for addressing potential electric price increases.¹

BACKGROUND

Section 2807(e)(2) of the Competition Act requires the Commission to promulgate regulations governing an EDC's obligation to serve retail customers after the conclusion of its transition period. 66 Pa.C.S. § 2807(e)(2). This duty is often referred to as the "provider of last resort" ("POLR") obligation. As the Competition Act makes clear, the purpose of this obligation is to address the scope of retail electric service that must be provided to customers who either have not chosen an alternative electric generation supplier or who contracted for electric energy that was not delivered. Section 2807(e) of the Competition Act provides several directives that the Commission must follow in its promulgation of regulations on this subject:

(2) At the end of the transition period, the commission shall promulgate regulations to define the electric distribution company's obligation to connect and deliver and acquire electricity under paragraph (3) that will exist at the end of the phase-in period.

(3) If a customer contracts for electric energy and it is not delivered or if a customer does not choose an alternative electric generation supplier, the electric distribution company or commission-approved alternative supplier shall acquire electric energy at prevailing market prices to serve that customer and shall recover fully all reasonable costs.

(4) If a customer that chooses an alternative supplier and subsequently desires to return to the local distribution company for generation service, the local distribution company shall treat that customer exactly as it would any new applicant for energy service.

¹ Default Service and Retail Electric Markets, Docket M-00072009; Policies to Mitigate Potential Electricity Price Increases, Docket No. M-00061957.

66 Pa.C.S. § 2807(e)

The proposed regulations were published in the *Pennsylvania Bulletin*, Volume 35, No. 9, on February 26, 2005. A 60 day comment period and 60 day reply comment period followed, the latter of which concluded on June 27, 2005. The Independent Regulatory Review Commission (the "IRRC") filed comments to this proposed rulemaking order on July 27, 2005.

The Commission reopened the public comment period in late 2005 to address the relationship between the default service rulemaking and the Alternative Energy Portfolio Standards Act of 2004. 73 P.S. § 1648.1, *et seq.* ("AEPS Act").² This second public comment period concluded on April 7, 2006. The IRRC stated in a letter dated May 8, 2006, that it had no additional comments, and that the due date for a final default service rulemaking had been extended to April 7, 2008.

On February 8, 2007, the Commission issued an ANFOR at this docket. The ANOFR included numerous changes to the proposed rule intended to address concerns raised by the IRRC and other parties, and to reflect changes in Commission policy on a number of issues. Comments and reply comments were requested. Separately, the Commission issued a proposed policy statement on certain issued relating to default service and retail choice. *Default Service and Retail Electric Markets*, Docket No. M-00072009 (Proposed Policy Statement Order entered February 9, 2007).

Comments to the proposed rulemaking order and/or ANOFR were filed at this docket by many parties, including the Allegheny Conference on Community Development, Allegheny Power ("Allegheny"), BP Solar, Citizens for Pennsylvania's

SUMMARY OF CHANGES

The Commission has made significant changes to the proposed regulations issued on December 16, 2004. We have determined that the public interest can best be served by modeling certain portions of the default service rules on our form of regulation of natural gas supply costs. That is, there should be regular adjustments to default service rates to reflect changes in the actual, incurred costs of the default service provider ("DSP"). This practice of regular adjustment with the use of spot market energy supply products will ensure that rates more closely track prevailing wholesale energy prices, and that customers do not experience large changes in rates as program terms expire. When wholesale energy prices rise over a period of several years, we find that a series of small rate increases is to be preferred to one large increase at the end of a plan's term of service. Reconciliation is strongly encouraged, though not mandated, in order to ensure the full recovery of the DSP's reasonable costs.

DSPs should consider a portfolio of energy supply products when developing their procurement plans. A reasonable procurement strategy may include a mix of fixed-term and spot market energy purchases, the use of laddered contracts, etc. The Commission discourages the practice of procuring all needed supply for a period of service at a single point in time. Instead, we recommend that the DSP use multiple competitive procurements and spot market purchases to meet its obligations and to reduce the risk of acquiring all supply at a time of unusual price volatility. We expect that DSPs will gradually increase their reliance on shorter term contracts and spot market energy products over time.

Rate design should be simplified to provide normal incentives for energy conservation and to facilitate customer choice. This will be done through the elimination of declining blocks rates and some demand charges. These designs may be gradually phased out to mitigate the bill impact for customers. Each default service customer will

be offered a single rate option, which will be displayed on a customer's monthly bill as the Price-to-Compare ("PTC"). The PTC is an informational tool designed to facilitate customer choice, and represents the sum of all unbundled generation and transmission charges associated with default service. Additionally, customers may have the option of selecting an alternative time based rate if the Commission separately determines that the public interest requires DSPs to offer such rates to customers.

The Commission is mindful of the risks of being too prescriptive in its approach to this rulemaking. Changes in markets, technology and applicable law may result in an approach that is too narrowly tailored to serve Pennsylvania's interests. Accordingly, we do not attempt to dictate the exact manner by which every DSP will acquire electricity, adjust rates, and recover their costs. The Commission is issuing a separate policy statement that contains guidelines for DSPs in the areas of procurement, rate design, and cost-recovery. Reserving some aspects of our regulation of default service to a policy statement will allow the Commission, DSPs, retail customers, and other market participants to consider these policies in the context of individual default service plans, and to more effectively respond to changes in retail and wholesale markets.

DISCUSSION

The Commission has reviewed the comments filed at each stage of this proceeding. For purposes of this Final Rulemaking Order, we will focus on revisions to the proposed regulations and ANOFR, and the issues raised by the IRRC in their comments of June 27, 2005.

In developing this final form rule, the Commission has attempted to craft rules that reflect stakeholder consensus to the extent that any agreement is aligned with the requirements of the Competition Act and the interest of ratepayers. We have found, as

6

-

evidenced by the comments, that there is relatively little consensus on most of the key issues addressed by this rulemaking proceeding, including energy procurement, rate design and cost-recovery. This is not surprising, given the divergence in interests among those participating in this rulemaking process.

We make this observation cognizant of the fact that this rule is subject to the review of the Pennsylvania General Assembly ("General Assembly") and the IRRC, and that interested parties are free to support or oppose this regulation in those forums. We find that this rule achieves the objectives of the Competition Act on issues relating to default service, including the acquisition of electricity at prevailing market prices, customer choice of generation suppliers through direct access, and the full recovery of reasonable costs for EDCs. There is sometimes a tension between these and the other objectives of the Competition Act that, if not balanced appropriately, can frustrate the intent of the General Assembly. The Commission has therefore crafted a regulatory framework that does not unreasonably advance one objective to the extent that it obstructs others. Consequently, to the extent that changes to this final form rule are required as part of the regulatory review process, such revisions may not occur in isolation.

A. Need for Regulations, Currently Effective Default Service Plans, and Pending Default Service Proceedings.

In its first comment, the IRRC questioned whether the Commission was promulgating regulations too far in advance of the expiration of rate caps. Several parties who participated in the POLR Roundtable proceeding in 2004 recommended that the Commission wait at least several more years before promulgating regulations. These parties cautioned that changes in retail and wholesale markets might render ineffective any regulations adopted too far in advance of the end of the transition period. The IRRC noted that additional experience, including more study of default service models in other

states, and further consideration of the requirements of the AEPS Act, might benefit the Commission in preparing regulations.

We believe this issue has been resolved given the passage of time since we proposed this rule. Six EDC generation rate caps have expired, and the remaining ones will end by December 31, 2010. The Commission has also had the benefit of several more years to study how neighboring jurisdictions are managing POLR service and the expiration of rate caps. The Commission now has a significantly better understanding of the impact of the AEPS Act on default service than it did in 2004. We have also learned from the experience of several Pennsylvania EDCs who have concluded their transition periods and implemented default service plans since 2004. Finally, the overwhelming majority of stakeholders would prefer to have regulations finalized as soon as possible. Accordingly, the Commission finds that it would be appropriate to conclude the default service rulemaking by mid-2007. This will provide needed regulatory certainty to those EDCs preparing their first default service programs, who collectively serve the large majority of Pennsylvania ratepayers.

The Commission has already approved interim default service plans for six EDCs that have completed their transition periods.⁵ A number of parties, such as Duquesne, UGI, the Energy Association, and the OSBA, have asked that the Commission clarify the impact of final regulations on plans that are effective or now under Commission consideration.⁶ It has been suggested that this issue be addressed by delaying the effective date of these regulations until January 1, 2011, when the last EDC generation rate cap has expired.

⁵ Citizens, Duquesne, Pennsylvania Power Company, PCLP, UGI and Wellsboro.

⁶ Default service proceedings are currently pending before the Commission for Duquesne, PCLP and the Pennsylvania Power Company. Citizens and Wellsboro are also expected to file plans for our consideration during 2007.

The Commission will not apply these regulations to already effective default service plans. In Pennsylvania, the retroactive application of laws is disfavored when it affects the substantive rights of parties. *Giant Eagle, Inc. v. Worker's Compensation Appeal Board*, 764 A.2d 663 (Pa. Cmwlth. 2000). Most of these interim default service plans will expire within the next twelve months, and we can find no public interest in disturbing their terms and conditions of service for so short a period of time.

Nor will the Commission require EDCs with pending default service proceedings to withdraw their filings and submit new plans. The Commission will not know if these final form regulations have obtained all necessary regulatory approvals for several months. Even assuming these regulations are approved by the end of July 2007, we question whether there would be sufficient time for EDCs to seek Commission approval of new, amended default service plans and obtain supply at reasonable prices prior to the expiration of their currently effective rates on December 31, 2007.⁷

However, the Commission will not grant a blanket waiver of these regulations at this time for plans now, or soon to be under, consideration by the Commission. Instead, the Commission recommends that EDCs with pending plans evaluate whether they wish to amend their filings. EDCs should take into consideration whether the delay of these proceedings resulting from an amendment would materially prejudice their ability to procure energy prior to the expiration of currently effective rates. If EDCs do not wish to amend their pending plans, they should request a waiver, in the pending proceeding, from any provision of the approved regulations that conflicts with their proposal. In reviewing any waiver requests, the Commission will be guided by its stated policy objectives of mitigating the impact of potential electric price increases for retail customers.

⁷ Currently effective rates for Duquesne, PCLP, Citizens and Wellsboro will expire on December 31, 2007.

B. § 54.123. Competitive safeguards

The IRRC commented that certain proposed safeguards may improperly restrain customer choice, which is protected by Section 2807(e)(4) of the Competition Act. We have deleted the language the IRRC identified as problematic. The Commission will instead rely on its powers to prosecute and assess civil penalties on electric generation suppliers for violations of the Code of Conduct at 52 Pa. Code § 54.122 and other relevant regulations and statutory provisions. Given our finding that rates be regularly adjusted to reflect changes in the composition of the DSP's portfolio, we find that the risk of an EGS exploiting seasonal price variation, to the detriment of the DSP, is greatly reduced.

C. § 54.181. Purpose

The IRRC commented that this section should be revised to reflect that parties other than EDCs may be approved to serve as a DSP. Any DSP, whether they are an EDC or not, is entitled to full recovery of reasonable costs. Accordingly, the phrase "other approved entity" has been added to the last sentence of Section 54.181. The purpose of our default service regulatory framework is expanded upon in the final policy statement on "Default Service and Retail Electric Markets."

D. § 54.182. Definitions

The Commission received many comments on the proposed definitions and this section reflects some revisions. Certain terms have been deleted given changes in other parts of the regulation, and new terms have been added. The IRRC provided comments

on four different definitions. "Default service provider" has been modified consistent with the IRRC's suggestion to comply with the Pennsylvania Code & Bulletin Style Manual. "Fixed rate option" and "hourly priced service" have been deleted from this section given our changes to the section on rate design and cost recovery. The definition for "competitive procurement process" has been revised, and we will respond to the IRRC's comment on this issue in subsequent sections of this final order.

New definitions have been added, including PTC, maximum registered peak load, and spot market energy purchase. These definitions are required due to other changes to the regulations that will be discussed in subsequent sections of this final order.

Definitions have been further revised based on comments to the ANOFR by PPL and the Energy Association. For example, the word "lowest" has been added to the definition for "competitive bid solicitation process" to be consistent with the version that appears in the default service policy statement. The definition for "default service" has also been clarified. Additionally, the definition for PTC has been revised to reflect that it is intended to serve as a new line item to facilitate customer choice.

E. § 54.183. Default service provider

The IRRC asked the Commission to explain its decision in Section 54.183(a) to require the EDC to serve as the DSP unless the Commission approves an alternative. The IRRC observes that Section 2807(e)(1) of the Competition Act requires an EDC to assume this role while it is recovering stranded costs, but that it does not mandate that this role continue indefinitely. This description of the statutory language is correct.

However, the Commission cannot assume that there will be other parties qualified to or even interested in taking on the DSP role. There must be a DSP already in place in

each territory to serve retail customers the day generation rate caps expire. Accordingly, the Commission must pick some party to be the initial DSP. The EDCs are the only parties that currently have certificates of public convenience to provide electric utility service in all of their particular territory. As the holder of a certificate, the EDC cannot refuse to serve retail electric customers within its designated service territory. The Commission cannot force another party, such as an EGS, to assume the DSP role. Therefore, the Commission has no choice but to initially designate the EDC to assume the DSP role. Section 2802(16) of the Competition Act clearly gives the Commission this authority:

Electric distribution companies should continue to be the provider of last resort in order to ensure the availability of universal electric service in this Commonwealth unless another provider of last resort is approved by the Commission.

66 Pa.C.S. § 2802(16). This section does not include language supporting a limitation of the DSP role to the transition period. Additionally, the Commission does not interpret Section 2807(e)(2) as in any way *requiring* the Commission to allow an EDC to exit this function. The Commission has been granted broad authority by the General Assembly to define the obligations of EDCs after the transition has expired, including whether they are to continue in the role of the DSP. Designating the EDC as the *initial* DSP in each service territory is a reasonable approach to take in order to ensure the availability of electric service to all customers. Section 54.183 of these regulations identifies a process by which the DSP can be changed from an EDC to another party, as allowed by Section 2807(e)(2), when the Commission finds it to be in the public interest. The Commission's interpretation of the Competition Act is reasonable and consistent with the intent of the General Assembly.

In regards to Section 54.183(b), the IRRC has requested that the Commission provide more specific criteria for changing the DSP. The Commission agrees that more

specific criteria are appropriate. This version includes proposed changes to address this issue. The Commission draws on Sections 1103, 1301, and 1501 and 2807(e)(3) of the Public Utility Code, 66 Pa.C.S. §§ 1103, 1501, 2807(e)(3), in developing these criteria. Section 1103(a) requires that the Commission only award a certificate of public convenience when finding that utility service is necessary for the "... accommodation, convenience, or safety of the public." Section 1301 requires that all rates charged by a utility be "just and reasonable." Section 1501 requires that the conditions of public utility service "... be adequate, efficient, safe, and reasonable." Section 2807(e) finds that a DSP can only recover "reasonable" costs. Thus, if an EDC can no longer provide default service in a safe and efficient manner, and/or in a way that reflects the incurrence of reasonable costs, the Commission may make a finding that other parties should be considered for the role.

The IRRC identified several concerns regarding Section 54.183(c). It asked whether it would be appropriate to require an EGS or EDC to obtain a certificate of public convenience if it wished to assume the DSP role. We now conclude that a certificate is not necessary, and have eliminated that requirement. We have also identified criteria, similar to those in 54.183(c), for selecting from among more than one qualified parties who wish to serve as the alternative DSP. Finally, we observe that to the extent that an alternative DSP is approved, this entity will be subject to assessments for the Commission's regulatory expenses. Specifically, we would require a party to agree to subject themselves to regulatory assessments as a condition of becoming an alternative DSP.

If a party does not wish to be responsible for these costs, then they should not seek to become a DSP. The Competition Act does not give any party a statutory right to become an alternative DSP. The Commission, at its discretion, may impose terms and conditions it believes to be appropriate for the reassignment. In response to comments by Strategic to the ANOFR, we have made other revisions to Section 54.183(c) in order to be able to fully utilize the potential of alternative DSPs. For example, it may be in the public interest to reassign some, but not all, customer classes to an alternative DSP. It may also be appropriate to utilize more than one alternative DSP if the obligation is assigned. One alternative DSP could be approved for residential and small business customers and a separate DSP for large customers.

F. § 54.184. Default service provider obligations

The IRRC asked that the Commission more specifically identify what regulations and statutory provisions a DSP must adhere to. We have added these references for purposes of clarity at Section 54.184(b).

The IRRC properly raised the issue of whether an alternative DSP would have a universal service obligation. In the event that a reassignment occurs, the incumbent EDC's universal service obligation must be addressed. The Commission finds that the Competition Act requires that consumer protections be maintained at the level they existed at the time of the Competition Act's passage. 66 Pa.C.S. § 2802(10). In Section 54.184(c), the Commission now acknowledges that if an EDC is relieved of the default service obligation, consideration will need to be given to the proper allocation of universal service responsibilities between that EDC and the replacement DSP. Universal service programs must be maintained at the same level in the event of the reassignment of the DSP role.

In a recent order the Commission provided guidance on the recovery of universal service program costs. *Customer Assistance Programs: Funding Levels and Cost Recovery Mechanisms*, Docket No. M-00051923 (Final Investigatory Order entered

14

. . December 18, 2006). The order provides that utilities may propose a surcharge to recover the costs of these programs from residential customers.

Even if the DSP role is reassigned, the incumbent EDC will still be providing transmission and distribution service to retail customers. Universal service programs cover the costs of transmission, distribution and generation service. The proper solution may be for the EDC to continue to administer and recover all costs for universal service programs. The EDC could then reimburse the alternative DSP for whatever services are provided by the DSP.

Some parties commented on this issue in their response to the ANOFR. For example, PPL recommended that the universal service obligation be largely shifted to the alternative DSP. However, the OCA and FirstEnergy believes that this function should remain with the incumbent EDC. In the absence of any actual experience with reassigning the full default service role, we are reluctant to issue a blanket rule at this time. A uniform standard may be developed after the Commission has adjudicated a petition to reassign the DSP role.

At the suggestion of the OCA, we have also made express the DSP's obligation to serve retail customers whose EGS has defaulted on their obligation to provide generation service. This revision is made at Section 54.184(a).

G. § 54.185. Default service programs and terms of service

This section has been significantly revised. Pursuant to 54.185(a), DSPs will be filing "default service programs" instead of implementation plans, and this definition has been added to Section 54.182. Responding to the IRRC's question on alternative DSP filings, the Commission notes that no alternative DSPs have been approved, and no

requests are pending. In the event that an alternative DSP was approved after this regulation became effective, we would expect that the alternative DSP file its program at least twelve months prior to the expiration of the generation rate cap or approved default service program in that service territory. If this is not possible due to the timing of the reassignment, a waiver of this provision could be sought, consistent with 52 Pa. Code § 5.43.

Section 54.185(b) has been amended consistent with the IRRC's recommendation to identify the documentary filing regulations that must be adhered to. Therefore we are including a reference to 52 Pa. Code § 1.1, *et seq*. We are also directing the DSP to serve a copy of its default service program on any EGSs registered in the DSP's service territory, and to make it available on their public internet domain.

After reflecting on the IRRC's and other parties comments on this issue, the Commission has revised the language of Section 54.185(c) on program duration by selecting a two to three year term for the <u>first</u> default service program filed after the effective date of these regulations. The Commission has not been able to identify an optimal program duration based on its current knowledge of energy markets. This issue has therefore been reserved to the default service policy statement, which recommends a standard duration of two years for subsequent programs. As wholesale and retail markets change over time, the Commission will provide guidance on appropriate program durations. If markets mature to the point where the Commission can identify the ideal program duration, this regulation will then be revised accordingly.

We also agree with the IRRC's comment to this section about excessive reliance on energy contracts of greater than one year. We are encouraging DSPs to gradually increase their utilization of spot market purchases and short fixed term contracts, a subject which is discussed at length in this order. The final policy statement we are issuing contains guidelines on this topic.

Section 54.185(d) of the proposed rules has been eliminated, as procurement specific requirements have been moved to the new section 54.186. The revised 54.185(d) identifies the required elements of the default service program. The default service program will consist of three main elements: a procurement plan for acquiring electric generation supply, an implementation plan that identifies the schedules and technical requirements of these procurements, and a rate design plan. The program will also include documentation of compliance with the RTO requirements, a contingency plan in the event of supplier default, copies of all agreements and forms to be used in competitive solicitations, and schedules identifying generation contracts with existing customers.

Section 54.185(e) remains largely the same in the final form version. The Commission recognizes that retail customers may benefit from the economies of scale realized by combining the procurements of more than one service territory into a single auction process. DSPs may submit such proposals for our consideration.

The Commission is also concerned about the possibility of DSPs scheduling multiple, large procurements at the same point in time. This might negatively impact the price of bids. Guidelines on this issue are included in the default service policy statement. We will work with relevant parties to balance the potential benefits associated with building economies of scale, with the associated increase in interest by suppliers, versus potential complications related to suppliers having to commit a large amount of their generation portfolio at a single point in time.

Section 54.185(f) has been moved to 54.185(d)(4) and is largely unchanged. The term ISO, which stands for Independent System Operator, has been dropped from this section as no Pennsylvania EDC is under the operational control of an ISO. While PCLP is owned by a member of the New York Independent System Operator ("NYISO"), its transmission system is not under the NYISO's operational control.

Section 54.185(g) has been moved to 54.185(d)(3). Sections 54.185(h) and (i) have been deleted. Section 54.185(j), now 54.185(d)(7) has been revised from "long term generation contracts" to "generation contracts greater than two years" to respond to a comment from the IRRC. Section 54.185(k), has been moved to 54.185(d)(6) and expanded to include all forms and agreements used as part of the default service implementation plan. The inclusion of these documents has been made mandatory, consistent with the recommendation from the IRRC.⁸ Section 54.185(l) has been moved to 54.185(d)(5), and left largely unchanged. Section 54.184(m), which the IRRC identified some concerns with, has been deleted.

In response to comments to the ANOFR by FirstEnergy and others, the time for the filing of a default service program has been reduced from fifteen to a minimum of twelve months in advance of the expiration of the current program at Section 54.185(a). However, DSPs should give consideration to filing more than twelve months ahead of time, particularly for complex or initial post-rate cap default service programs.

We also received responses to our request for comments in the ANOFR on the coordination of procurements. PPL, PECO, FirstEnergy, Allegheny and Constellation have all expressed an interest in some form of coordinated, statewide or multi-territory procurement process with uniform rules. We agree that such an approach may reduce administrative costs and facilitate wholesale supplier participation. Additionally, as recommended by Constellation, the Commission has no objection to the use of a single independent consultant to manage a multi-territory, coordinated, procurement process. However, a multi-service territory default service program must comply with the other aspects of this rule, including procurements by customer class, regular adjustments of rates, etc.

18

⁸ The Commission has initiated a separate proceeding to develop standardized request for proposal forms and supplier master agreements at Docket M-00061960.

Both Citizens and Wellsboro filed comments to the ANOFR and default service policy statement highlighting the challenges faced by smaller EDCs in managing the default service obligation. For example, these EDCs comment that they may have difficulty managing a portfolio of resources, multiple procurements, etc., even if they were to aggregate their load. They suggest that the Commission make more express its willingness to grant small DSPs waivers from appropriate provisions.

We agree that smaller DSPs such as Citizens, Wellsboro, PCLP and, to a lesser extent UGI, face different challenges than larger EDCs, and have fewer resources to manage their obligation. Accordingly, we are adding Subsection 54.185(f) to the final form rule. This has two purposes. First, it puts all DSPs on notice that they should include all requests for waivers to this subchapter in their default service program filings. Second, it affirms that special consideration will be given to the waiver requests of DSPs that serve smaller numbers of customers.

Section 54.185(d)(7) has been revised in response to a comment to the ANOFR by IECPA. Schedules identifying each generation contract between the incumbent EDC and customers shall only be provided to the Commission. Individual customer information will be given confidential status.

H. § 54.186. Default service procurement and implementation plans

This section has been substantially revised. We will first address the IRRC's comments to both this section and 54.185(d) regarding the requirement for competitive procurement processes. The IRRC and some other commentators question the need to prescribe the manner in which electricity can be procured. The IRRC observes that Section 2807(e) does not expressly mandate that competitive bidding be used to procure

19

......

electric generation supply for default service customers. The IRRC recommends that this be modified, and that the Commission should be disinterested as to the method for procurement, so long as supply as acquired at prevailing market prices.

Initially, we must observe that we are expressly charged by the General Assembly with defining the obligation to "acquire" electricity:

At the end of a transition period, the commission <u>shall promulgate</u> regulations to define the electric distribution company's obligation to <u>connect and deliver and acquire electricity</u> under paragraph (3) that will exist at the end of the phase-in period.

66 Pa.C.S. § 2807(e)(2) (emphasis added). The scope of this rulemaking properly includes the acquisition of electricity. This obligation cannot be defined without addressing the method of the acquisition.

It is true that electric utilities do routinely acquire electricity through bilateral contracts that are not a result of competitive procurement processes. These bilateral contracts may very well reflect "prevailing market prices." However, the Commission concludes that the optimal method of acquiring electricity includes a direct exposure to market forces. This exposure can best occur either through a competitive procurement process or a purchase in a spot energy market managed by an RTO such as the PJM Interconnection, LLC.⁹ We note it is the standard practice of the Commonwealth of Pennsylvania to use competitive bidding when procuring goods or services of significant value. 62 Pa.C.S. § 101, *et seq.*

in the second

⁹ We remind the IRRC that most Pennsylvania EDCs have wholesale energy supplier affiliates with substantial generation assets. Permitting the routine use of bilateral contracts would allow an EDC to negotiate a contract with its affiliate, with all the potential risks and conflicts of interest this would entail. Requiring competitive procurements largely eliminates the risk that an EDC's wholesale energy affiliate would be given some preference in the procurement of default service supply. Some parties who commented to the ANOFR suggested that the Commission allow bilateral contracts with non-affiliates. As discussed in this section, the Commission is very skeptical of a DSP's ability to obtain the best price for customers with bilateral, long-term contracts.

In considering this rulemaking, the IRRC should be cognizant of one of the key findings of the General Assembly included in the "Declaration of policy" section of the Competition Act:

<u>Competitive</u> market forces are more effective than economic regulation in controlling the cost of generating electricity.

66 Pa.C.S. § 2802(5) (emphasis added). In interpreting a statute, legislative intent, controls. 1 Pa.C.S. § 1921. We find that the plain language of the Competition Act demonstrates a preference for the use of "competitive market forces" in controlling the cost of electricity. The regular use and Commission approval of no-bid, bilateral energy contracts would be an exercise in "economic regulation" of the sort that the Competition Act discourages. We conclude that Section 2807(e) must be read together with the General Assembly's declarations of policy at Section 2802. The optimal forms of default service procurement are therefore competitive bid solicitations and spot market energy purchases. The recognition that spot market purchases are appropriate is a change from the proposed version of the rules, and consistent with the IRRC's request that DSPs be given more procurement options and that the Commission allow procurements that reflect "prevailing market prices." The Commission's interpretation of the Competition Act is reasonable and reflects the intent of the General Assembly.

However, the Commission recognizes that there may be some circumstances where a short-term, bilateral contract is necessary and appropriate. For example, in the event that a wholesale energy supplier would default on a contract, the DSP would need to acquire replacement supply. We would not want to limit the DSP to acquiring electricity in only the spot market. In that situation, one or more bilateral contracts of 1-3 months may be appropriate until a permanent solution could be achieved, and may be incorporated in a DSP's contingency plan. To the extent a DSP believes an exception to the procurement standard is required regarding bilateral contracts, a petition for waiver may be filed pursuant to 52 Pa. Code § 5.43.

Section 54.186 has been significantly revised as to form and content. Section 54.186(a) provides that supply will be acquired consistent with Commission approved default service procurement and implementation plans. Section 54.186(b) identifies procurement plan standards, some of which are new to this version. This includes the requirement to use competitive procurement processes or spot market energy purchases only. This change is at least partly in response to the IRRC's comment to the proposed 54.187(b), that rates includes seasonal or monthly variation to reflect the prevailing market prices. Incorporating spot market products in a DSP's portfolio, when coupled with the regular adjustment of rates, will ensure that retail rates are responsive to changes in wholesale market prices.

Procurement plans should have the objective of obtaining the lowest, reasonable price. Given our recent experience with PCLP, we recognize that small DSPs have a greater challenge in attracting the interest of wholesale energy suppliers. Accordingly, they are directed to consider the benefits of coordinating their procurements with other DSPs. Section 54.156(b)(1), relating to affiliate participation, has been moved to Section 54.156(b)(5).

Section 54.156(b)(2) has been moved to 54.156(c)(1) in this version with few changes. In responding to the IRRC's questions regarding bid evaluation criteria, we are revising this to "price-determinative bid evaluation criteria." It is our expectation that the energy suppliers who submit the lowest priced bids, providing they have met all bidder qualification criteria, will be awarded generation contracts by the DSP. Issues regarding the reliability and creditworthiness of a supplier should be addressed in bidder qualification criteria.

The original 54.156(c) has been deleted and 54.186(d) has been moved to new 54.186(c)(3). Consistent with the IRRC's and other parties' recommendations, third

party oversight is now a mandatory part of this process. Guidelines for selecting a third party evaluator are addressed in more detail in the default service policy statement.

The original 54.186(f) has been deleted and its substance is addressed in the revised 54.188. In the revised 54.188, we address the IRRC's comment on the old 54.186(f)(2) that we reduce the time to review competitive procurement results.

We have also responded to the IRRC's comment on contingency plans at 54.186(g) (and 54.187(i) and 54.188(e)). The prior versions of these sections have been deleted as duplicative or otherwise revised or moved to new sections. Contingency plans must be still included in the default service program, at the new 54.185(d)(5). The terms and conditions of a contingency plan will be subject to Commission review as part of the examination of the default service program under the procedures at the revised 54.188. Responding to the IRRC's comment on "acquisition strategies", we find that acceptable contingency plans may incorporate spot market purchases, a competitive bid solicitation process (if time permits), or a short-term bilateral contract, as acknowledged previously in this section. Individual spot market purchases do not require prior Commission approval, consistent with the revised 54.188. When issuing an order on a particular default service program, the Commission would clearly address the level of Commission oversight in the execution of a contingency plan.

Section 54.186(h) has been moved to 54.186(c)(5). Additional guidelines regarding confidentiality of information are addressed in the default service policy statement.

In response to a comment by UGI to the ANOFR, the words "to the extent applicable" have been added to 54.186(c)(1) to acknowledge the fact that a DSP may not solely procure load following service. For example, a DSP has the discretion to use other types of contracts including on-peak, off-peak, or structured block products (e.g., 7 days a

week, 24 hours a day), etc., as part of its procurement plan. In response to a comment by PPL, Section 54.186(c)(1)(vii) has been revised to state that data may need to be provided according to the divisions in maximum registered peak load, as opposed to customer class. We have also adjusted the wording of this subsection, in response to a comment by FirstEnergy to the ANOFR, to ensure that "current" load information be made available to suppliers at an "appropriate time," which will likely be a time closer to the actual competitive bid process. The reference to 54.186(b)(2)(vi) in Section 54.186(c)(4) of the ANOFR, which was intended to refer to price determinative bid criteria, has been corrected to 54.186(c)(1)(vi).

In response to comments by Strategic and other parties, we wish to clarify that Section 54.186(b)(3), which allows for supply contracts that extend beyond the duration of the program-term, is primarily intended to address the subject of contract laddering. The Commission recognizes that the laddering of supply products may be a valid element of a portfolio strategy, particularly in the initial period following the expiration of rate caps. For laddering to occur, it may be necessary for some portion of the supply acquisition to overlap the end of one program term, and the beginning of another.

This section should not be interpreted to mean that the Commission has no policy preference on contract lengths. We stand by Section 69.1805 of the default service policy statement, which provides that long-term contracts should primarily be used to meet the requirements of the Alternative Energy Portfolio Standards Act, and the supply needs of residential and small business customers in the early years of the post-transition period. We do suggest in the policy statement that full requirements or block purchase contracts of one to three years in length, which may be laddered, be part of the portfolio for residential and small business customers for the DSP's first default service program. We also suggest that the portion of the portfolio that relies on shorter term contracts (e.g., 1 year or less) and the spot market be gradually increased with time. This procurement

approach is consistent with Competition Act standard that energy be acquired at prevailing market prices.

In conclusion, we are generally skeptical of the DSP's ability to beat the market over periods of time greater than one year. Incumbent EDCs have simply not provided any real record in this or other default service proceedings to show that they can anticipate changes in market prices, and take advantage of this information to obtain consistently lower prices through long-term contracts compared to short-term and spot market purchases. Wholesale market prices are very sensitive to factors completely beyond the control of DSPs, suppliers and regulators, including weather, global energy demand, and war. This is one of the key reasons we are discouraging the use of bilateral contracts in the acquisition of default service supply. We believe customers will save more money as DSPs gradually increase their utilization of short-term fixed price contracts and spot market products, and what data we do have supports this premise. For example, Direct Energy cited to a report in its reply comments that Duquesne's residential customers would have saved \$75 million during the first two years of its "POLR III" plan if they had been on monthly priced service.¹⁰ Small commercial customers would have realized savings of \$28 million over the first 23 months of the POLR III plan. Id.

We are sensitive to the concerns of parties regarding price volatility, and the need for customers to become accustomed to market pricing and the regular adjustment of rates. Therefore we do support reliance on longer-term, fixed price products in the years immediately following the expiration of rate caps.

¹⁰ Intelometry Inc., Power Price Report, Pittsburgh Market (Duquesne Light) 1/1/05 through 11/30/06, December 2006. Direct Energy also provided evidence in a separate proceeding, which they refer to in their reply comments, that the PJM monthly clearing price in the PJM zone was less than the PPL tariff price for residential customers in at least 32 out of 49 months between 2002 and 2005. Direct Energy Reply Comments, pg. 3. Direct Energy asserts that PECO's small commercial customers would have saved approximately \$1.1 billion off their tariff rate between January 1, 2002, and November 30, 2005, through the use of a monthly pricing mechanism. Intelometry Inc., Power Price Report, Philadelphia Market (PECO) 1/1/02 - 11/30/06, December 2006.

I. § 54.187. Default service rate design and the recovery of reasonable costs

This section has been significantly revised. After reviewing the many comments on this issue from the IRRC and other parties, the Commission concluded that its approach to rate design and cost recovery was too prescriptive. Therefore, this section has been revised to provide more flexibility to DSPs and the Commission to manage the default service obligation. Additional guidelines on rate design and cost-recovery are included in the default service policy statement.

Many commentators believed that the proposed version of 54.187(a) was overly complex, or simply incorrect in its design. The IRRC also had many questions about this section. We agree that this is one of the more technically complex issues of this rulemaking. In the revised Section 54.187(a), the Commission limits its finding to the requirement that the default service rate should represent the sum of all generation and transmission related costs.

In response to the IRRC's comments on the proposed 54.187(a)(1) and (a)(2), the Commission maintains its position that distribution rates should be examined to ensure that no generation costs remain embedded. The PTC, which is derived from default service rates at a particular point in time, shall be designed to recover all default service costs for an average member of a customer class. The revised 54.187(d) provides that the default service rate may not include any distribution costs, and that EDC distribution rates be reduced to reflect embedded costs reallocated to the generation component of the PTC. However, we believe that this issue will require considerable study and additional policy development. Therefore we have moved much of the detail on this issue to the final policy statement on default service, where we identify what we believe to be the appropriate cost elements for default service. We expect that each EDC will have its

distribution rates addressed in a separate proceeding to finally resolve this issue. This may involve the performance of new cost of service studies for each EDC, as suggested by the IRRC. The Commission may also make use of a collaborative process to develop uniform standards on embedded costs to be applied to each EDC.

In response to the IRRC and other parties' comments to 54.187(b), (c) and (d), we have removed the language mandating fixed rate options and hourly rates for certain customer classes. The associated definitions have been deleted from 54.182. The new Section 54.187(b) now provides that each customer will have a single rate option, which will be described as the PTC. The PTC will be a new, separate line item on a monthly bill that represents the sum of all transmission and generation related charges. The PTC will not replace the unbundled generation, distribution, and transmission charges that currently appear on a monthly bill. The use of a PTC will enable customers to make more informed choices regarding whether or not to seek service with an EGS. We intend that customers be educated about the use of the PTC as part of the consumer education initiatives that will be implemented pursuant to the Final Order in the price mitigation proceeding.

In order to provide normal incentives for conservation, and to reflect the actual cost of energy, we have revised Section 54.187(c). The revised language will have the effect of eliminating "declining blocks" from rate schedules. Some EDC rate schedules currently provide that the rate charged per kWh declines once the customer uses a certain amount of electricity in a given month, such as 1000 kW. This provision would require those rate designs for default service to be eliminated.¹¹

Sections 54.187(e) and (f) address the issue of cost reconciliation. Consistent with the comments of the IRRC, Section 54.187(e) has been revised to include a reference to

¹¹ In its most recent POLR filing, at Docket P-00072247, Duquesne proposed to eliminate declining blocks and demand charges for all customers by 2010.

the Commission's alternative energy regulations at Chapter 75. In responding to the IRRC's concern about reconciliation, we note that the AEPS Act expressly provides that alternative energy costs be recovered through a Section 1307 automatic adjustment clause. See 73 P.S. § 1648.3(a)(3). Cost-recovery mechanisms for alternative energy are also being specifically addressed in a pending rulemaking at Docket L-00060180.¹² As the alternative energy portfolio standard is effectively a component of the default service obligation, these rules necessarily contain cross-references.

In response to the IRRC's comment to the proposed 54.187(a)(3) and 54.187(d), we do not believe that these rules will hinder the ability of DSP's to meet their AEPS requirements. The AEPS Act expressly provides that:

(4) (i) An electric distribution company or electric generation supplier shall comply with the applicable requirements of this section <u>by purchasing</u> <u>sufficient alternative energy credits</u> and submitting documentation of compliance to the program administrator.

(ii) For purposes of this subsection, one alternative energy credit shall represent one megawatt hour of qualified alternative electric generation, whether self-generated, purchased along with the electric commodity <u>or</u> <u>separately through a tradable instrument</u> and otherwise meeting the requirements of commission regulations and the program administrator.

73 P.S. §1648.3(e)(4) (Emphasis added). Accordingly, a DSP may meet its portfolio requirements solely with alternative energy credits that have been separated from the energy commodity. Therefore, the use of competitive procurements in combination with automatic adjustment clauses, or hourly priced options, poses no problems for alternative energy compliance.¹³ Energy prices or rate options are irrelevant, because the DSP does not have to buy energy to satisfy the requirements of the AEPS Act.¹⁴

¹² Implementation of the Alternative Energy Portfolio Standards Act of 2004, Docket L-00060180 (Proposed Rulemaking Order entered July 25, 2006).

¹³ PECO filed a petition with the Commission on March 19, 2007, regarding its AEPS obligations. It proposes to hold several competitive auctions for <u>alternative energy credits only</u> in late 2007 and early 2008. The costs of these credits would be recovered through a Section 1307 automatic adjustment clause after PECO's generation rate cap

In Section 54.187(f) the Commission provides that a DSP may propose costreconciliation of non-alternative energy costs as part of its default service program. The Commission now concludes that reconciliation of default service costs may be necessary, and in fact is more desirable, to enable the DSP to "... recover fully all reasonable costs" so that the PTC reflects market prices. 66 Pa.C.S. § 2807(e)(3). If the DSP wishes to utilize a cost reconciliation mechanism, the default service policy statement provides guidelines on this subject. The original Section 54.187(h), which was commented on by the IRRC, and included a prohibition on reconciliation, has therefore been removed.

To respond to the concern of the IRRC regarding reconciliation, we find that parity between EDCs and EGSs can be maintained through the regular adjustment of rates, the gradual increase in spot market products, and the limitation on the use of longterm contracts, and several other measures. With these elements, the default service rate will more closely track the market prices offered by EGSs. The elimination of declining blocks and the use of the PTC will also facilitate competitive choice. We are also exploring a variety of other initiatives through the default service policy statement to facilitate retail choice. Finally, this regulation does not <u>mandate</u> the use of reconciliation. We will be monitoring DSP's use of reconciliation mechanisms going forward, and to the extent that they are abused, we will decline to approve, or otherwise modify, their use.

Section 54.187(g) requires the DSP to include demand side response and management rates in their default service program <u>if</u> the Commission has mandated that

expired. Petition of PECO Energy Company for Approval of (1) A Process to Procure Alternative Energy Credits During the AEPS Banking Period and (2) A Section 1307 Surcharge And Tariff To Recover AEPS Costs; Docket P-00072260. PECO would bank these credits during its rate cap period and use them satisfy its non-solar photovoltaic Tier I obligations for several reporting periods.

¹⁴ This statutory interpretation is codified in the pending rulemaking at Docket L-00060180. The legal challenge to this interpretation filed in the context of the appeal of the Commission's ruling on Pennsylvania Power Company's POLR filing at Docket P-00052188 has been withdrawn. *See* Commonwealth Court Docket 1085 C.D. 2006. We note that in that case, Pennsylvania Power Company made its wholesale suppliers contractually responsible for providing it with sufficient alternative energy credits to meet its portfolio obligation under the AEPS Act for the term of that plan.

666193

such rates be available. The Commission is studying this topic as part of a pending investigation into conservation, energy efficiency, and demand side response.¹⁵ Consistent with the IRRC's suggestion, we have included a definition of demand side response and demand side management by reference to an existing definition found at Section 1648.2 of the AEPS Act, 73 P.S. § 1648.2. In response to the IRRC's question regarding potential hardship for smaller DSPs in offering these programs, this is an area where a waiver may be requested.

The revised Section 54.187(g) allows for the option of an hourly priced rate for residential customers, as recommended by the IRRC in their comment to proposed Section 54.187(b). We are aware that real time pricing pilots have recently been implemented in Illinois for residential customers in response to the expiration of rate caps, and believe that such pilots may also be appropriate in Pennsylvania. A DSP may therefore propose to include an optional, hourly priced rate for residential customers in its default service program. However, we are reluctant to *mandate* that hourly priced service be offered at this time to all customers. In order for hourly priced service to be offered, EDCs may need to make significant new investments in metering, billing and communication systems. These investments may cost a significant amount of money, and these costs would ultimately be recovered from ratepayers. The Commission needs to carefully consider the costs associated with hourly pricing before mandating that all customers have this option. This is one of a number of issues being studied in our pending investigation on DSR, energy efficiency and conservation.

Sections 54.187(h), (i) and (j) represent major revisions to the rulemaking. Specifically, the Commission finds that the PTC should be adjusted on a regular basis as opposed to remaining fixed for the entire duration of a program. This is consistent with a recommendation made by the IRRC, in its comment to the proposed section 54.187(b),

30

¹⁵ Investigation of Conservation, Energy Efficiency Activities, and Demand Side Response by Energy Utilities and Ratemaking Mechanisms to Promote Such Efforts, Docket No. M-00061984 (Order entered October 11, 2006).

that rates have some variability to reflect market prices. This also addresses the IRRC's comment to the proposed 54.187(g), that adjustment mechanisms be clearly set forth. The frequency of this PTC adjustment would be dependent on the customer class.¹⁶ For residential and small business customers, rates will be adjusted at least every quarter. For large business customers, the PTC will be adjusted at least every month. DSPs have the discretion to propose more frequent adjustments in their program filings, consistent with the IRRC suggestion that flexibility be allowed for in this area. Accordingly, DSPs may elect to offer hourly rates to large commercial and industrial customers.

As stated earlier, this approach is similar to our regulation of natural gas supply costs. The purchased gas cost rate for most natural gas distribution companies is adjusted quarterly to reflect changes in their incurred costs of supplying customers. 52 Pa. Code § 53.64(i)(5). When wholesale market prices move higher, rates increase. When prices decline, rates are reduced. Having regular adjustments allows the utility to collect its costs immediately, avoid and manage cost under recoveries, and not incur additional costs associated with trying to recover the difference between costs and revenues all at one time. If gas customer rates were not adjusted quarterly, the annual reconciliation process could demonstrate larger divergences between costs incurred and revenues received. Overall costs would be higher, as more interest would need to be paid either by the utility or customers in reconciling costs and revenues. Pennsylvania's residential gas customers, most of whom are also customers of EDCs, are well accustomed to having their gas rate adjusted quarterly. We expect that retail electric customers can manage quarterly adjustments as well.

In both this rulemaking and the accompanying policy statement, the Commission is encouraging DSPs to acquire a portfolio of generation supply products. Rather than simply procuring all generation at one time for the entire duration of the program, DSPs

¹⁶ Consistent with suggestions made by the IRRC and other commentators, we are giving the DSP some flexibility in determining the divisions of customers to preserve existing rate schedules.

should consider a mix of fixed-term and spot market energy purchases, laddered contracts, and the use of both supply and demand resources. The Commission recognizes the risks posed by the practice of procuring all generation supply for the entire duration of a program at a single point in time.

PCLP's last default service filing is a case in point. PCLP procured all of its default service supply for 2006-2007 through an auction held in October of 2005, approximately two months after Hurricane Katrina severely disrupted wholesale energy markets and the nation's energy infrastructure. As a result of very high prices in wholesale markets, PCLP's average customer experienced a total bill increase of about 75% on January 1, 2006, which included a generation rate increase of about 129%. Because all energy was acquired at one point in time, PCLP's default service rate for the entire two year program was locked in and reflected the market price of the day of the auction. Even though wholesale energy prices retreated substantially from their late 2005 and early 2006 peaks, PCLP's high default service rate was not reduced.

This is in marked contrast to the experience of retail customers of PCLP's parent company, Orange & Rockland Utilities, Inc. ("O&R"), whose territory lies just across the state line in New York. For the same time period covered by PCLP's plan, Orange & Rockland was utilizing a portfolio approach, whereby it was acquiring supply through a mix of fixed-term contracts and spot market energy púrchases. The costs O&R incurred to serve its default customers therefore changed over time in response to changes in wholesale market prices. O&R's retail customers are charged a "market supply charge" which changes every month. While O&R's market supply charge increased in October of 2005, it declined in subsequent months as wholesale energy prices retreated.¹⁷ PCLP's customers did not benefit from the decline in wholesale energy prices as their rate was set in advance for a two year period.

¹⁷ O&R's price to compare for the last few years can be viewed at http://www.oru.com/energyandsafety/energychoice/newyork/orupricetocompare.html

In this rulemaking and the default service policy statement, the Commission is encouraging DSPs to take an approach similar to O&R's. This would include the use of multiple fixed-term contracts and spot market energy purchases. Laddering of contracts should also be considered. This is a departure from some of the recent POLR filings where the entire supply was provided pursuant to one or more fixed-term contracts. A small step was taken in this direction in the recent Pennsylvania Power Company default service plan, where energy was procured for a 17 month period in two separate auctions.

In arriving at this decision, we find that there is simply too much risk associated with procuring all supply at a fixed rate for the entire duration of the program. When a price is locked in and wholesale rates move lower, customers will experience what PCLP customers have dealt with over the past few years. When wholesale energy prices increase above a fixed rate, customers may experience sharp, unplanned increases when the program expires (e.g., the experience of many customers in this region, including Maryland, when generation rate caps set during a time of lower wholesale energy prices expired).

Fixed default service rates for prolonged periods are also detrimental to the development of retail markets in Pennsylvania. For example, EGSs have simply not been able to compete with the below market rates offered by EDCs during the generation rate cap period. Customer choice is largely nonexistent outside the territory of Duquesne, the only large EDC whose generation rate cap has expired.¹⁸ A PTC that is fixed for long periods of time, and that does not adjust to changes in wholesale energy prices, will stifle competition. We believe customers will receive the lowest rates when multiple EGSs are competing for their business, as is the case for any good or service that consumers need.

¹⁸ The experience of Duquesne shows that retail markets can work. Duquesne's territory has the highest rate of customer choice in Pennsylvania. See <u>http://www.oca.state.pa.us/Industry/Electric/elecstats/instat.htm</u>. Its overall retail electric rates remain 15% below what they were when the Competition Act was passed in 1996. http://www.puc.state.pa.us/general/pdf/Thomas_Stmt_OSA0203_081904.pdf.

If DSP rates are fixed at below market prices for prolonged periods, EGSs will not be able to make price attractive offerings to customers. Instead, customers will be left with no readily available alternative to the DSP's rate when it eventually is adjusted to reflect the market price. The PCLP experience will be repeated again and again. If EGSs know that the PTC will be adjusted consistent with the DSP's incurred costs as wholesale markets change, they will invest more time and money in establishing a presence in Pennsylvania, and marketing their service to customers. Customers will then have greater opportunity to choose among suppliers and realize savings.

This is not to say that customers should be deprived of the opportunity to obtain a fixed price for generation service. We have concluded that the public interest will be served, in the form of lower rates over the long term, if the default service rate is regularly adjusted to reflect changes in default service costs as they occur. In this regulatory environment, EGSs will respond by entering the market in greater numbers, and if there is a significant demand for these types of rates, offer them.¹⁹ We caution, however, that such price certainty does not come without increased costs for the customer. A retail rate that cannot be adjusted over a significant period of time in response to changes in wholesale energy markets will reflect a risk premium, whether offered by a DSP or an EGS.

Many comments were filed in response to this section of the ANOFR on the subject of declining blocks, cost-reconciliation, customer groupings and rate design. The Commission has made a number of changes to the ANOFR in response to these comments.

¹⁹ In support of this assertion we refer to the OCA's residential gas customer shopping guide, dated January 5, 2007. One year, fixed price contracts for residential customers are currently available in the service territories of Columbia Gas, Dominion Peoples, and UGI Utilities, Inc. – Gas Division.

The Price-to-Compare

In response to comments to the ANOFR, we are clarifying the use of the PTC. This is a new line item that represents the sum of generation and transmission related charges. However, transmission and generation related charges should still be included on the monthly utility bill as separate line items. In response to a comment from Constellation regarding taxes, we wish to confirm that sales tax should not be included in the PTC.

Declining Blocks and Demand Charges

The Commission received comments both for and against the elimination of declining blocks in response to the ANOFR. Some parties, such as the OCA, warned that their abrupt elimination may lead to rate shock for certain customer classes. Others, like IECPA, Allegheny, US Steel, and PECO, believe that demand charges and/or declining blocks are an appropriate element of rate design.

In addressing these comments, we will review UGI's most recent default service plan. On April 17, 2006, UGI filed a petition with the Commission to establish default service rates for the 2007-2009 period. After the proceeding was initiated, UGI and several other interested parties initiated settlement discussions. A Joint Petition for Settlement was filed with the Commission on June 1, 2006. The signatories included UGI, the OCA, the OSBA and Constellation.

Under the terms of the settlement, UGI agreed to phase out some declining block rates and generation demand charges over a three year period. UGI attached the testimony of David C. Beasten, Director of Electric Power Supply and Rates, in support of the settlement. On the topic of declining blocks, Mr. Beasten testified:

When one purchases energy in the market, one generally pays the same price for all the energy purchased. Having declining block rates for generation service thus gives a false price signal to customers.

Mr. Beasten explained that immediate elimination of these rates could result in rate shock for some customers. Accordingly, UGI proposed to phase out these rates over three years. The Commission accepted this proposal, and approved the Joint Settlement. *Petition of UGI Utilities, Inc. – Electric Division for Approval to Implement 2007-2009 Default Service Tariff Provisions on One Day's Advance Notice*, Docket No. P-00062212 (Order entered June 22, 2006).

We still agree with Mr. Beasten's testimony that declining block rates for default service gives false price signals to customers. This false price signal discourages energy conservation and complicates retail choice. Therefore, the requirement to eliminate all declining block rates will remain in the final version of this rule.

However, we do accept the argument of IECPA, Allegheny, US Steel and PECO that generation and transmission demand charges may be appropriate in some circumstances for large commercial and industrial customers. Accordingly, this rule does not include a blanket prohibition on generation and transmission demand charges. DSPs may propose demand charges that are rationally related to the costs of providing service to large commercial and industrial customers. Incumbent EDCs should not assume that the Commission will approve the demand charges currently appearing in their tariffs. We agree with the reply comments of the OSBA that the current demand charges are a legacy from the pre-restructuring era, and do not reflect the actual costs of serving these customers in today's markets. DSPs should be prepared to include strong evidence in their default service program filings that supports the design and cost basis of any proposed demand charges.

The UGI Joint Settlement is also appropriate for consideration in the context of price increase mitigation. The Commission agrees with the OCA that the immediate termination of declining block rates and generation demand charges could lead to rate shock for certain customers. Therefore, we will apply the rate change mitigation provision of the default service policy statement to this issue. If a DSP finds that the elimination of declining blocks or demand charges would lead to an increase of 25% or more for any customer class, it should propose to gradually phase out these design elements through a series of annual adjustments. The length of this adjustment process may vary, depending on the size of the increase to be mitigated. Generally, we believe this can be done within 2-3 years.

Cost Reconciliation

We recognize that the use of a reconciliation mechanism was strongly opposed by some who responded to the ANOFR, who assert that the use of a reconciliation mechanism may harm the development of retail competition. Some, like Dominion, believe that DSPs may use reconciliation to give a false price signal in order to keep retail customers from shopping. The DSP could attempt this by charging a below market PTC and then recovering any under collections, with interest, during an end of the year reconciliation process.

We have given serious consideration to these comments and the potential problems identified. Consistent with the gas cost recovery model, we will provide for asymmetrical interest calculations for under and over collections.²⁰ Interest paid to the DSP will be at the legal rate of interest, which is 6%.²¹ The interest rate paid to customers for refunds of over collections shall be 8%. This will serve as a disincentive to price manipulation behavior, and an incentive to acquire energy at prevailing market

²⁰ 66 Pa.C.S. § 1307(f)(5). ²¹ 41 P.S. § 202.

prices. The Commission will also closely monitor the use of reconciliation mechanisms by DSPs.

We remind DSPs that the discretion afforded them by this regulation is not an invitation to acquire all energy through a handful of multi-year full requirements contracts and then passively observe costs and revenues significantly diverge in response to wholesale market events, customer migration, etc. Such conduct would not be consistent with the acquisition of energy at "prevailing market prices" or the incurrence of "reasonable costs." 66 Pa.C.S. § 2807(e)(3).

Rather, we are giving DSPs the tools to proactively manage their default service obligation. A DSP may minimize the risk of under collection through the regular adjustment of rates. Additionally, we believe the risk of seasonal gaming will be greatly reduced when the PTC is adjusted on a regular basis in response to the change in composition of the portfolio. This is why we have directed that the PTC be adjusted at least every quarter or month, depending on customer size. This approach ensures full customer choice but protects DSPs from seasonal gaming and under recovery of costs.

To the extent that a DSP is concerned that it lacks the expertise or resources to proactively manage short-term purchases, they are free to retain the services of other parties and include these costs in their rates. For example, a DSP could outsource the management of its spot and short-term energy portfolio. As stated earlier in this order, this regulation also allows DSPs to coordinate their procurements of default service supply. Smaller DSPs are strongly encouraged to consider pooling their resources in the management of the default service obligation, and may request waivers from provisions that are too burdensome.

Additionally, at the suggestion of IECPA and others, we have revised this section to clearly state that the use of a reconciliation mechanism will be subject to annual review

38

and audit, consistent with Sections 1307(d) and (e) of the Public Utility Code. The review of alternative energy and non-alternative energy costs recovered through an automatic adjustment clause should be addressed in the same proceeding in order to reduce administrative costs to the parties. The public notice and hearing provisions of Section 1307(e) will apply to these filings.

Customer Groupings and Frequency of Rate Changes

Some parties have objected to the frequency of rate changes for customers, asserting that this will produce harmful volatility in rates. We simply disagree with this analysis. We cite to the experience of the State of Maryland, which has already transitioned to market based rates, as referenced by Strategic and NEM in their comments to the ANOFR:

The Commission concurs with the parties that rate stability is an important public policy goal generally, and particularly with respect to SOS. Recent experience suggests that longer term fixed prices do not contribute to that goal; indeed they create a false sense of complacency that costs are in fact stable, followed by the painful transition when rates are finally adjusted to reflect current costs ... The upshot is that frequent, albeit small rate changes, are a better vehicle for insuring relative rate stability (and a more gradual reflecting of changes in current market prices) rather than longer periods of frozen rates, followed by rate shock.

Maryland Public Service Commission, Case No. 9056, Investigation into Default Service For Type II Standard Offer Service Customers, Order 81019, Issued August 19, 2006.

In response to those suppliers who feel that quarterly and monthly changes in rates are too infrequent, we remind them that the regulation sets the minimum frequency of change. For example, DSPs may propose more frequent changes in rates, such as hourly priced service, for their larger commercial and industrial customers.

39

-

In response to the comments of the IRRC on this issue to the proposed Section 54.187(c), the Commission wishes to emphasize that the regulations allow DSPs the discretion to propose alternative groupings of retail customers for good cause. For example, Duquesne may propose to continue to offer hourly priced service to all customers at or above 300 kw. DSPs may also separate residential and small business customers for procurement purposes, as recommended by the OCA.

We recognize that the number and distribution of customers across classes varies significantly from territory to territory. For example, it may be necessary to combine the customer classes of smaller DSPs in order to develop tranches of sufficient size for competitive auctions. Alternatively, individual tranches may be stratified into residential and business customer segments when there are insufficient customers to create separate tranches for the different customer-classes. Reasonable, alternative groupings of customers may be proposed for our consideration, consistent with the suggestion of the IRRC.

Single Rate Option

Some parties believe that the Commission is unduly restricting the rate options available to customers in this rulemaking. It has been suggested that Section 2806(h) of the Public Utility Code, 66 Pa.C.S. § 2806(h), be used in the context of default service to provide flexible pricing options to individual customers. DSPs may include proposals for flexible rates in their default service programs. However, these programs may increase the complexity and costs of providing basic default service. Additionally, these proposals must comply with the Public Utility Code and recent precedent regarding reasonable differences in rates between customer classes. 66 Pa.C.S. § 1304; *Lloyd v. Pa. Public Utility Commission*, 904 A.2d 1010 (Pa. Cmwlth 2006).

The Commission will keep an open mind on the appropriateness of renewable energy default service products, such as PECO's "Wind Tariff."²² However, we observe that two EGSs are currently offering "green" energy products to residential customers in PECO's service territory. Additionally, default service supply will begin to incorporate a gradually increasing renewable energy component with the expiration of the rate cap, consistent with the requirements of the AEPS Act. PECO may propose the continuation of this rate in its first default service program and submit evidence of how this service is consistent with a "provider of last resort" role in the post-transition period.

Finally, we are revising Section 54.187(k) in response to a comment made by the OCA to the ANOFR. The OCA recommends that a DSP be required to first use any collateral owed by a wholesale supplier pursuant to an energy contract in the event of a default. Only after this collateral was fully exhausted could the DSP seek to recover the incremental costs of a default from customers. We agree with this recommendation and have revised Section 54.187(k) to require DSPs to first seek recovery under their "contract terms with the default supplier."

J. § 54.188. Commission review of default programs and rates

Section 54.188 has been revised to reflect the introduction of new terms such as default service program, etc. The review period standard has been moved from the Section 54.186(f)(2) to 54.188(d) in this version. Some parties commented that the proposed review period was too long and open-ended, and may detrimentally affect the prices bid by suppliers. The IRRC, in comments to the prior version of 54.186(f)(2)

²² The Commission held that offering and marketing this tariff was permissible under the terms of the settlement agreement relating to the establishment of the Exelon Corporation and its merger with the Unicom Corporation. However, the Commission did not make a final decision on the availability or marketing of this tariff in the context of post-transition period default service. *Green Mountain Energy Company v. PECO Energy Company*, Docket R-00016938C0001 (Order entered July 18, 2003).

recommended reducing the review period from "no less than" to "no more than" 3 business days. The Commission agrees with these comments, and believes the period can be reduced. Accordingly, the Commission is reducing its review period from "no less than three business days" to no more than "one business day." The Commission provides additional guidelines on this issue in the default service policy statement.

We have clarified Section 54.188(d) to state that while the result of a solicitation may be deemed approved if not formally rejected within one business day, this does not represent the end of the Commission's oversight. Should information subsequently come to the attention of the Commission that the DSP failed to adhere to the approved plan, that the DSP disclosed confidential information to an affiliate, or that one or more bidders engaged in fraud, collusion, bid rigging, price fixing or other unlawful acts the Commission would investigate and seek appropriate remedies.

We agree with the IRRC that procurement plans should be reviewed to ensure that their design will result in reliable supply of electric at market prices with the incurrence of reasonable costs. The default service policy statement includes guidelines for DSPs intended to help achieve this goal.

We are declining to adopt the IRRC and some other commentators' suggestion that we lengthen the default service case timeline from six to nine months. The Commission has adjudicated several default service cases, including the Pennsylvania Power Company's most recent filing, within a six month period. We believe that with the issuance of final regulations, greater consistency among filings, and the experience that will come with each case, the Commission, DSPs, and other parties will become more efficient in the filing and review of default service programs. However, we will adjust the standard to seven months, and this final form regulation reflects this change. This is the same time period for which the Commission may suspend a tariff in the context of requests for general rate increase. 66 Pa.C.S. § 1308(d). Where more time is

truly necessary, particularly with initial filings, the DSP can petition for a waiver or modification of the seven month standard pursuant to 52 Pa. Code § 5.43.

Section 54.188(e) provides more structure for the review and approval of the initial rates that will take effect at the beginning of a default service program. The revised regulations establish a standard that should result in customers receiving notice of new rates within a reasonable period of time, and more opportunity to consider other options, including service with an EGS.

Section 54.188(f) now addresses standards for tariff filings required by our decision to require regular adjustment of the PTC. Section 54.188(g) has been eliminated as unnecessary and duplicative. A provision for the waiver of Commission regulations is already in place at 52 Pa. Code § 5.43.

In response to comments by UGI and others to the ANOFR, we are revising Section 54.188(d) to state that we will not conduct an after the fact prudency review of purchases made consistent with a Commission approved default service plan. We are also revising this section, based on a comment from FirstEnergy, to observe that the Commission approval is not required for individual spot market purchases made pursuant to a Commission approved procurement plan. The Commission will study the DSPs overall spot market acquisition strategy in its review of the default service program. However, as noted above, a DSP's disclosure of confidential information to an affiliate or fraud, collusion, bid rigging or price manipulation by suppliers would be subject to Commission investigation and appropriate remedial action.

Section 54.188(e) has been clarified at the suggestion of the OCA to require that customers be given initial notice of the filing of the default service program. This notice is modeled on the provision that applies to natural gas distribution companies utilizing Section 1307(f) of the Public Utility Code.

In response to IRRC's comment on this section, we note that the proposed Section 54.188(g) has been deleted. Requests for waivers must now be included in the default service program, consistent with the new 54.185(f). The phrase "and other applicable laws" no longer appears in this context.

K. § 54.189. Default Service Customers and the Standards for Transferring Customer Accounts to Default Service Providers

We agree with the IRRC that limitations on choice are inappropriate and contrary to the provisions of the Competition Act. We find that by providing for regular rate adjustments that track changes in market prices, any incentives to game the system through frequent changes in suppliers is greatly reduced. References to regulatory provisions have been added for clarity.

In response to comments by the OCA and IECPA, the Commission is making several edits to this section. Customers who are taking service with an EGS do not need to "apply" for default service. These customers should have already gone through an application process with an EDC when they first signed up for electric utility service. Since the incumbent EDC is currently the DSP in all service territories, customers who are shopping are still EDC customers for purposes of distribution and transmission service. Accordingly, they do not need to apply again, and potentially be required to pay onerous security deposits, to return to the DSP from an EGS.²³

²³ Several parties commented on PECO commercial customers currently receiving generation service from an EGS as a consequence of PECO's Market Share Threshold program. These customers have the right to change their generation service provider at any time. However, the Commission will not, and PECO should not, automatically reassign these customers to default service upon the expiration of the generation rate cap.

CONCLUSION

The Commission thanks the parties for their comments and participation in this proceeding. Given the high level of public interest in this matter, we offer the following information on the next steps in this rulemaking procedure. Upon the entry of this Final Order, the Commission will prepare this rule for delivery to the General Assembly and the IRRC. If the rule is approved by the IRRC, it will be forwarded to the Pennsylvania Attorney General for review as to form and legality. The Pennsylvania Attorney General has thirty days to review this final form rule. If not rejected by the Pennsylvania Attorney General, the rule will become legally effective upon publication in the Pennsylvania Bulletin. This process should take approximately two to three months

Accordingly, under 66 Pa. C.S. §§ 501, 2807(e)(2), and the Commonwealth Documents Law, 45 P.S. §§ 1201 *et seq.*, and the regulations promulgated hereunder at 1 Pa. Code §§ 7.1, 7.2, and 7.5, the Commission proposes adoption of the final regulations pertaining to the obligations of EDCs to connect, deliver and acquire electricity at the conclusion of the transition period, as noted and set forth in Annex A; **THEREFORE**,

IT IS ORDERED:

1. That this docket adopts the final regulations in Annex A.

2. That the Secretary shall submit this order and Annex A to the Office of Attorney General for approval as to legality.

3. That the Secretary shall submit this order and Annex A to the Governor's Budget Office for review of fiscal impact.

4. That the Secretary shall submit this order and Annex A for review by the designated standing committees of both houses of the General Assembly, and for review and approval by the Independent Regulatory Review Commission.

5. That the Secretary shall deposit this order and Annex A with the Legislative Reference Bureau for publication in the *Pennsylvania Bulletin*.

6. That regulations embodied in Annex A shall become effective upon publication in the *Pennsylvania Bulletin*.

7. That the contact person for this rulemaking is Shane M. Rooney. Alternate formats of this document are available to persons with disabilities and may be obtained by contacting Sherri Delbiondo, Regulatory Coordinator, Law Bureau, 717-772-4597.

BY THE COMMISSION,

James J. McNulty, Secretary

(SEAL) ORDER ADOPTED: May 10, 2007 ORDER ENTERED: May 10, 2007

ANNEX A

TITLE 52. PUBLIC UTILITIES PART I. PUBLIC UTILITY COMMISSION Subpart C. FIXED SERVICE UTILITIES CHAPTER 54. ELECTRICITY GENERATION CUSTOMER CHOICE Subchapter A. CUSTOMER INFORMATION

§ 54.4. Bill format for residential and small business customers.

(b) The following requirements apply only to the extent to which an entity has responsibility for billing customers, to the extent that the charges are applicable. The [provider of last resort] <u>default service provider</u> will be considered to be an EGS for the purposes of this section. Duplication of billing for the same or identical charges by both the EDC and EGS is not permitted.

§ 54.5. Disclosure statement for residential and small business customers

(b) The EGS shall provide the customer written disclosure of the terms of service at no charge whenever:

(3) Service commences from a [provider of last resort] <u>default service</u> provider.

(c) The contract's terms of service shall be disclosed, including the following terms and conditions, if applicable:

* * * * *

(9) The name and telephone number of the [provider of last resort] <u>default</u> service provider.

* * * * *

(h) If the [provider of last resort] <u>default service provider</u> changes, the new [provider of last resort] <u>default service provider</u> shall notify customers of that change, and shall provide customers with their name, address, telephone number and Internet address, if available.

§ 54.6. Request for information about generation supply.

(a) EGSs shall respond to reasonable requests made by consumers for information concerning generation energy sources.

* * * * *

(2) The [provider of last resort] <u>default service provider</u> shall file at the Commission the annual licensing report as required by the Commission's licensing regulations in this chapter and shall otherwise comply with paragraph (1).

Subchapter B. ELECTRIC GENERATION SUPPLIER LICENSING

§ 54.31. Definitions.

The following words and terms, when used in this subchapter, have the following meanings, unless the context clearly indicate otherwise.

Default service provider – The incumbent EDC within a certificated service territory or a Commission approved alternative default service provider SUPPLIER OF ELECTRIC GENERATION.

[*Provider of last resort* – A supplier approved by the Commission under section 2807(e)(3) of the code (relating to duties of electric distribution companies) to provide generation service to customers who contracted for electricity that was not delivered, or who did not select an alternative electric generation supplier, or who are not eligible to obtain competitive energy supply, or who return to the provider of last resort after having obtained competitive energy supply.]

* * * * * *

§ 54.32. Application process.

(h) An EDC acting within its certificated service territory as a [provider of last resort] <u>default service provider</u> is not required to obtain a license.

§ 54.41. Transfer or abandonment of license.

(b) A licensee may not abandon service without providing 90 days prior written notice to the Commission, the licensee's customers, the affected distribution utilities and [providers of last resort] <u>default service providers</u> prior to the abandonment of service. The licensee shall provide individual notice to its customers with each billing, in each of the three billing cycles preceding the effective date of the abandonment.

Subchapter E. COMPETITIVE SAFEGUARDS

§ 54.123. Transfer of customers to default service.

The following standards apply to the transfer of a retail customer's electric generation service from an EGS to a default service provider within the meaning of § 54.182 (relating to definitions):

(1) An EGS may not transfer a retail customer from its electric generation service to the default service provider without the consent of the default service provider, except in the following situations:

(i) Upon Commission approval of the abandonment, suspension or revocation of an EGS license, consistent with §§ 54.41 and 54.42 (relating to transfer or abandonment of license and license suspension; license revocation).

-

(ii)Upon nonpayment by a retail customer for services rendered by the EGS.

(iii) To correct an unauthorized or inadvertent switch of a retail customer's account from default service to an alternative EGS's service, CONSISTENT WITH 52 PA. CODE § 57.177 (PERTAINING TO CUSTOMER DISPUTE PROCEDURES).

(iv) Upon the normal expiration of contracts that are not structured in a way to exploit seasonal variations in market prices for electric generation service.

(2) An EGS may initiate transfers in the above situations through standard electronic data interchange protocols.

(3) An EGS may not initiate or encourage transfers of service to a default service provider from the EGS to exploit seasonal variations in market prices for electric generation services.

(4)(3) The Commission may impose a penalty for every retail customer transferred to default service in violation of this section, consistent with 66 Pa.C.S. §§ 3301-3316 (relating to violations and penalties).

Subchapter G. DEFAULT SERVICE

§ 54.181. Purpose.

This subchapter implements 66 Pa.C.S. § 2807(e) (relating to duties of electric distribution companies), pertaining to an EDC's obligation to serve retail customers at the conclusion of the restructuring transition period. The provisions in this subchapter ensure that retail customers who do not choose an alternative EGS, or who contract for electric energy that is not delivered, have access to generation supply at prevailing market prices. The EDC OR OTHER APPROVED ENTITY shall fully recover all reasonable costs for acting as a default service provider of electricity ELECTRIC GENERATION SUPPLY to all retail customers in its certificated distribution territory.

5

-

§ 54.182. Definitions.

The following words and terms, when used in this subchapter, have the following meanings, unless the context clearly indicates otherwise:

<u>Alternative energy portfolio standards – A requirement that a certain percentage</u> of electric energy sold to retail customers in the Commonwealth BY EDCS AND EGSS be derived from alternative energy sources, as defined in the Alternative Energy Portfolio Standards Act, (73 P.S. §§ 1647.1 – 1647.78).

Commission - The Pennsylvania Public Utility Commission.

<u>Competitive procurement</u> BID SOLICITATION process – A fair, transparent, and non-discriminatory process by which a default service provider acquires AWARDS CONTRACTS FOR electric generation supply to serve its default service customers through a bid solicitation process QUALIFIED SUPPLIERS WHO SUBMIT THE LOWEST BIDS.

<u>Default service –</u>

(i) Electric generation service provided by a default service provider to a retail electric customer who does not choose an alternative EGS or who contracts for electric energy and it is not delivered.

(ii) Electric generation service provided pursuant to a Commission approved default service plan

ELECTRIC GENERATION SUPPLY SERVICE PROVIDED PURSUANT TO A DEFAULT SERVICE PROGRAM TO A RETAIL ELECTRIC CUSTOMER NOT RECEIVING SERVICE FROM AN EGS.

Default service implementation plan – A-filing submitted by a default service provider to the Commission that identifies the means for procuring generation supply for default service customers at prevailing market rates, the reasonable costs associated with default service, and all other necessary terms and conditions of service THE SCHEDULE OF COMPETITIVE BID SOLICITATIONS AND SPOT MARKET ENERGY PURCHASES, TECHNICAL REQUIREMENTS, AND RELATED FORMS AND AGREEMENTS.

666193

6

.

DEFAULT SERVICE PROCUREMENT PLAN – THE ELECTRIC GENERATION SUPPLY ACQUISITION STRATEGY A DSP WILL USE IN SATISFYING ITS DEFAULT SERVICE OBLIGATIONS, INCLUDING THE MANNER OF COMPLIANCE WITH THE ALTERNATIVE ENERGY PORTFOLIO STANDARDS REQUIREMENT.

DEFAULT SERVICE PROGRAM – A FILING SUBMITTED TO THE COMMISSION BY A DSP THAT IDENTIFIES A PROCUREMENT PLAN, AN IMPLEMENTATION PLAN, A RATE DESIGN TO RECOVER ALL REASONABLE COSTS, AND OTHER ELEMENTS IDENTIFIED AT § 54.185.

DEFAULT SERVICE RATE – THE RATE BILLED TO A DEFAULT SERVICE CUSTOMER RESULTING FROM COMPLIANCE WITH A COMMISSION APPROVED DEFAULT SERVICE PROGRAM.

DSP – <u>Default service provider</u> – The incumbent EDC within a certificated service territory or a Commission approved alternative default service provider SUPPLIER OF ELECTRIC GENERATION SERVICE.

<u>EDC – Electric Distribution Company – The term has the same meaning as</u> defined in 66 Pa.C.S. § 2803 (relating to definitions).

<u>EGS – Electric Generation Supplier – The term has the same meaning as defined</u> in 66 Pa.C.S. § 2803.

<u>FERC – The Federal Energy Regulatory Commission.</u>

<u>Fixed rate option</u> A default service price that is set in advance for the entire term of the default service implementation plan that may include seasonal differences.

Hourly priced service A default service price where the energy component of the generation supply charge is based on the RTO or ISO's LMP for energy, or other similar, mechanism.

ISO A FERC approved independent transmission system operator.

<u>*LMP*</u><u>Locational marginal pricing</u> A pricing mechanism used by some RTOs and ISOs, as defined in their FERC approved tariffs.

MAXIMUM REGISTERED PEAK LOAD - THE HIGHEST LEVEL OF DEMAND FOR A PARTICULAR CUSTOMER, BASED ON THE PJM INTERCONNECTION, LLC, PEAK LOAD CONTRIBUTION STANDARD, OR ITS EQUIVALENT, AND AS MAY BE FURTHER DEFINED BY THE EDC TARIFF IN A PARTICULAR SERVICE TERRITORY.

PTC – PRICE-TO-COMPARE – A LINE ITEM THAT APPEARS ON A RETAIL CUSTOMER'S MONTHLY BILL FOR DEFAULT SERVICE. THE PTC IS EQUAL TO THE SUM OF ALL UNBUNDLED GENERATION AND TRANSMISSION RELATED CHARGES TO A DEFAULT SERVICE CUSTOMER FOR THAT MONTH OF SERVICE.

<u>Prevailing market price</u> – (i) The price of electric generation supply for a term of service realized through a default service provider's implementation of and compliance with a Commission approved default service implementation plan.

(ii) The price of electric generation supply in the RTO or ISO administered energy markets in whose control area default service is being provided, acquired pursuant to the conditions specified in §§54.186(g), 54.187(i) or 54.188(e). THE PRICE THAT IS AVAILABLE IN THE WHOLESALE MARKET AT PARTICULAR POINTS IN TIME FOR ELECTRIC GENERATION SUPPLY.

<u>Replacement procurement process</u> <u>A Commission approved process, submitted</u> as part of the default service implementation plan, which provides for the acquisition of generation supply in the event that a supplier fails to deliver generation contracted for under the terms of a competitive procurement process.

<u>Retail customer or retail electric customer – These terms shall have the same</u> meaning as defined in 66 Pa.C.S. § 2803.

<u>RTO – Regional transmission organization – A FERC-approved regional</u> transmission organization.

SPOT MARKET ENERGY PURCHASE – THE PURCHASE OF AN ELECTRIC GENERATION SUPPLY PRODUCT IN A FERC-APPROVED REAL TIME OR DAY AHEAD ENERGY MARKET.

§ 54.183. Default service provider.

(a) The default service provider DSP shall be the incumbent EDC in each certificated service territory, except as provided for under subsection (b).

(b) (B) THE DSP MAY BE CHANGED BY ONE OF THE FOLLOWING PROCESSES:

(1) An EDC may petition the Commission to be relieved of the default service obligation.

(2) AN EGS MAY PETITION THE COMMISSION TO BE ASSIGNED THE DEFAULT SERVICE ROLE FOR A PARTICULAR EDC SERVICE TERRITORY.

(3) <u>In the alternative, the THE Commission may propose through its</u> own motion that an EDC be relieved of the default service obligation. <u>The</u> <u>Commission may approve those request if it is in the public interest</u>. <u>In such</u> <u>eircumstances, the Commission will announce through an order a competitive</u> <u>process to determine the alternative default service provider, which may be either</u> <u>an EDC or licensed EGS</u>.

(C) THE COMMISSION MAY REASSIGN THE DEFAULT SERVICE OBLIGATION FOR THE ENTIRE SERVICE TERRITORY, OR FOR SPECIFIC CUSTOMER CLASSES, TO ONE OR MORE ALTERNATIVE DSPS WHEN IT FINDS IT TO BE NECESSARY FOR THE ACCOMMODATION, SAFETY AND CONVENIENCE OF THE PUBLIC. A FINDING WOULD INCLUDE AN EVALUATION OF THE INCUMBENT EDC'S OPERATIONAL AND FINANCIAL FITNESS TO SERVE RETAIL CUSTOMERS, AND ITS ABILITY TO PROVIDE DEFAULT SERVICE UNDER REASONABLE RATES AND CONDITIONS. IN THESE CIRCUMSTANCES, THE COMMISSION WILL ANNOUNCE, THROUGH AN ORDER, A COMPETITIVE PROCESS TO DETERMINE THE ALTERNATIVE DSP.

(c) (D) When the Commission finds that an EDC should be relieved of the default service obligation, the competitive process for the replacement of the default service provider shall be as follows:

(1) Any EDC or EGS AN ENTITY that wishes to be considered for the role of the alternative default service provider DSP shall apply for a certificate of public convenience, consistent with 66 Pa.C.S. 1101 1103 (relating to organization of public utilities and beginning of service; enumeration of acts requiring certificate; and procedure to obtain certificates of public convenience) FILE A PETITION PURSUANT TO 66 PA.C.S. § 2807(E)(3).

(2) <u>Applicants PETITIONERS shall demonstrate their operational and</u> <u>financial fitness to serve and their ability to comply with Commission regulations,</u> <u>orders and applicable laws pertaining to public utility service.</u>

(3) If no applicant PETITIONER can meet this standard, the incumbent EDC will SHALL be required to continue the provision of default service.

(4) If one or more applicants PETITIONERS meets the standard provided in paragraph (2), the Commission will grant a certificate of public convenience to act as a default service provider to the applicant best able to fulfill <u>he obligation</u> APPROVE THE DSP BEST ABLE TO FULFILL THE OBLIGATION IN A SAFE, COST-EFFECTIVE, AND EFFICIENT MANNER, CONSISTENT WITH 66 PA.C.S. §§ 1103, 1501, AND 2807(E) (RELATING TO PROCEDURES TO OBTAIN CERTIFICATES OF PUBLIC CONVENIENCE; CHARACTER OF SERVICE AND FACILITIES; DUTIES OF ELECTRIC DISTRIBUTION COMPANIES).

(5) <u>An EGS that is granted a certificate of public convenience to act as</u> <u>an alternative default service provider will be considered a public utility within the</u> <u>meaning of 66 Pa.C.S. §102 (relating to definitions)</u> A PETITIONER APPROVED TO ACT AS AN ALTERNATIVE DSP SHALL COMPLY WITH APPLICABLE PROVISIONS OF THE PUBLIC UTILITY CODE, REGULATIONS, AND CONDITIONS IMPOSED IN APPROVING THE PETITION TO ACT AS AN ALTERNATIVE DSP.

§ 54.184. Default service provider obligations.

(a) A default service provider DSP shall be responsible for the reliable provision of default service to retail customers who are not receiving generation services from an alternative EGS within the certificated territory of the EDC that it serves OR WHOSE ALTERNATIVE EGS HAS FAILED TO DELIVER ELECTRIC ENERGY.

(b) <u>A default service provider DSP shall comply with applicable Commission</u> regulations and orders THE PUBLIC UTILITY CODE, 66 PA.C.S. § 101, *ET SEQ*., AND § 1.1, *ET SEQ*. to the extent that the obligations are not modified by this subchapter OR WAIVED PURSUANT TO § 5.43 (PERTAINING TO WAIVER OF COMMISSION REGULATIONS).

(c) <u>A default service provider DSP shall continue the universal service AND</u> ENERGY CONSERVATION program in effect in the EDC's certificated service territory or implement, subject to Commission approval, similar programs consistent with the 66 Pa.C.S. §§ 2801-2812 (relating to Electricity Generation Customer Choice and <u>Competition Act).</u> THE COMMISSION WILL DETERMINE THE ALLOCATION OF THESE RESPONSIBILITIES BETWEEN AN EDC AND AN ALTERNATIVE DSP WHEN AN EDC IS RELIEVED OF ITS DSP OBLIGATION.

<u>§ 54.185. Default service implementation plans and terms of service PROGRAMS</u> AND PERIODS OF SERVICE.

(a) <u>A default service provider DSP shall file a default service implementation</u> <u>plan PROGRAM with the Commission's Secretary's Bureau no later than fifteen</u> 12 <u>months prior to the conclusion of the currently effective default service plan PROGRAM</u> <u>or Commission-approved generation rate cap for that particular EDC service territory,</u> <u>unless the Commission authorizes another filing date.</u> THEREAFTER, THE DSP

SHALL FILE ITS PROGRAMS CONSISTENT WITH SCHEDULES IDENTIFIED BY THE COMMISSION.

(b) Default service implementation plans PROGRAMS must comply with Commission regulations pertaining to documentary filings AT § 1.1, ET SEQ. (PERTAINING TO RULES OF ADMINISTRATIVE PRACTICE AND PROCEDURE), except when modified by this subchapter. The default service provider DSP shall serve copies of the default service implementation plan PROGRAM on the Pennsylvania Office of Consumer Advocate, Pennsylvania Office of Small Business Advocate, the Commission's Office of Trial Staff, EGSS REGISTERED IN THE SERVICE TERRITORY, and the RTO or ISO OTHER ENTITY in whose control area the default service provider DSP is operating. COPIES SHALL BE PROVIDED UPON REQUEST TO OTHER EGSS AND SHALL BE AVAILABLE AT THE DSP'S PUBLIC INTERNET DOMAIN.

(c) <u>A default service implementation plan shall propose a minimum term of</u> <u>service of at least twelve months, or multiple twelve month periods, or for a period</u> <u>necessary to comply with subsection (f).</u> THE FIRST DEFAULT SERVICE PROGRAM SHALL BE FOR A PERIOD OF 2 TO 3 YEARS, OR FOR A PERIOD NECESSARY TO COMPLY WITH § 54.185(D)(4), UNLESS ANOTHER PERIOD IS AUTHORIZED BY THE COMMISSION. SUBSEQUENT PROGRAM TERMS WILL BE DETERMINED BY THE COMMISSION.

(d) <u>A default service implementation plan shall propose a fair, transparent and</u> <u>non-discriminatory competitive procurement process consistent with §54.186 for the</u> <u>acquisition of sufficient electric generation supply, at prevailing market prices, to meet</u> <u>the demand of all of the default service provider's retail electric customers for the term of</u> <u>service. The default service plan shall identify its method of compliance with the</u> <u>Alternative Energy Portfolio Standards Act (73 P.S. §§ 1647.1 1647.7).</u> A DEFAULT SERVICE PROGRAM SHALL INCLUDE THE FOLLOWING ELEMENTS:

(1) A PROCUREMENT PLAN IDENTIFYING THE DSP'S ELECTRIC GENERATION SUPPLY ACQUISITION STRATEGY FOR THE

666193

PERIOD OF SERVICE. THE PROCUREMENT PLAN SHOULD IDENTIFY THE MEANS OF SATISFYING THE MINIMUM PORTFOLIO REQUIREMENTS OF THE ALTERNATIVE ENERGY PORTFOLIO STANDARDS ACT, 73 P.S. § 1648.1, *ET SEQ*., FOR THE PERIOD OF SERVICE.

(2) AN IMPLEMENTATION PLAN IDENTIFYING THE SCHEDULES AND TECHNICAL REQUIREMENTS OF COMPETITIVE BID SOLICITATIONS AND SPOT MARKET ENERGY PURCHASES, CONSISTENT WITH § 54.186.

(3) A RATE DESIGN PLAN RECOVERING ALL REASONABLE COSTS OF DEFAULT SERVICE, INCLUDING A SCHEDULE OF RATES, RULES AND CONDITIONS OF DEFAULT SERVICE IN THE FORM OF PROPOSED REVISIONS TO ITS TARIFF.

(4) DOCUMENTATION THAT THE PROGRAM IS CONSISTENT WITH THE LEGAL AND TECHNICAL REQUIREMENTS PERTAINING TO THE GENERATION, SALE AND TRANSMISSION OF ELECTRICITY OF THE RTO OR OTHER ENTITY IN WHOSE CONTROL AREA THE DSP IS PROVIDING SERVICE. THE DEFAULT SERVICE PROCUREMENT PLAN'S PERIOD OF SERVICE SHALL ALIGN WITH THE PLANNING PERIOD OF THAT RTO OR OTHER ENTITY.

(5) CONTINGENCY PLANS TO ENSURE THE RELIABLE PROVISION OF DEFAULT SERVICE WHEN A WHOLESALE GENERATION-SUPPLIER-FAILS TO MEET ITS-CONTRACTUAL OBLIGATIONS.

(6) COPIES OF AGREEMENTS OR FORMS TO BE USED IN THE PROCUREMENT OF ELECTRIC GENERATION SUPPLY FOR DEFAULT SERVICE CUSTOMERS. THIS SHALL INCLUDE ALL DOCUMENTS USED AS PART OF THE IMPLEMENTATION PLAN, INCLUDING SUPPLIER MASTER AGREEMENTS, REQUEST FOR PROPOSAL DOCUMENTS,

CREDIT DOCUMENTS, AND CONFIDENTIALITY AGREEMENTS. WHEN APPLICABLE, THE DEFAULT SERVICE PROVIDER SHALL USE STANDARDIZED FORMS AND AGREEMENTS THAT HAVE BEEN APPROVED BY THE COMMISSION.

(7) A SCHEDULE IDENTIFYING GENERATION CONTRACTS OF GREATER THAN 2 YEARS IN EFFECT BETWEEN A DSP, WHEN IT IS THE INCUMBENT EDC, AND RETAIL CUSTOMERS IN THAT SERVICE TERRITORY. THE SCHEDULE SHOULD IDENTIFY THE LOAD SIZE AND END DATE OF THE CONTRACTS. THE SCHEDULE SHALL ONLY BE PROVIDED TO THE COMMISSION AND WILL BE TREATED AS CONFIDENTIAL.

(e) The Commission may, FOLLOWING NOTICE AND OPPORTUNITY TO BE HEARD, direct that some or all default service providers DSPS file joint default service implementation plans PROGRAMS that propose a competitive procurement process to procure TO ACQUIRE electric generation supply for all of their default service customers. In the absence of such a directive, some or all default service providers DSPS may jointly file default service plans PROGRAMS that propose a competitive procurement process to procure OR COORDINATE THE SCHEDULING OF COMPETITIVE BID SOLICITATIONS TO ACQUIRE electric generation for all of their default service customers. A multi-service territory competitive procurement process PROCUREMENT AND IMPLEMENTATION PLAN must comply with § 54.186.

(f) <u>A default service provider shall document that its proposal is consistent</u> with the legal and technical requirements pertaining to the generation, sale and transmission of electricity of the RTO or ISO in whose control area it is providing service. The default service plan's term of service and generation supply acquisition processes shall align with the planning period of that RTO or ISO.

(g) The default service implementation plan must include a schedule of rates, rules and conditions of default service in the form of proposed revisions to its tariff. The

default service provider may use the already effective retail customer classes in the EDC's service territory, or may propose a reclassification of retail customers.

(h) The default service implementation plan must identify the costs, consistent with §54.187, that will be recovered through a schedule of rates for the provision of default service.

(i) The default service implementation plan must include reasonable credit requirements, or other reasonable assurances of any supplier of electric generation services' ability to perform, as approved by the Commission.

(j) The default service implementation plan must identify the load size and end date of all existing long-term generation contracts that are in effect between the EDC and a retail customer within its service territory.

(k) The default service implementation plan should include copies of any proposed confidentiality agreements for the protection of proprietary information of the default service provider and generation suppliers. The Commission will approve reasonable confidentiality agreements, including expiration provisions, that will be binding on the default service provider, generation suppliers and any third party involved in the administration, review or monitoring of a default service supply procurement process.

(1) The default service provider shall include in its implementation plan a replacement procurement process to ensure the reliable provision of default service in the event a supplier fails to deliver electric generation supply it has agreed to provide pursuant to the terms of a Commission approved competitive procurement process.

(m) The Commission may issue orders further specifying the form and content of default service implementation plans when necessary to enforce or carry out the provisions of 66 Pa. C.S. §§2801-2812 (relating to Electricity Generation Customer Choice and Competition Act), and other applicable law.

(F) DSPS SHALL INCLUDE REQUESTS FOR WAIVERS FROM THE PROVISIONS OF THIS SUBCHAPTER IN THEIR DEFAULT SERVICE PROGRAM FILINGS. FOR DSPS WITH LESS THAN 50,000 RETAIL CUSTOMERS, THE

COMMISSION WILL GRANT WAIVERS TO THE EXTENT NECESSARY TO REDUCE THE REGULATORY, FINANCIAL OR TECHNICAL BURDEN ON THE DSP OR TO THE EXTENT OTHERWISE IN THE PUBLIC INTEREST.

§ 54.186. Default service supply procurement AND IMPLEMENTATION PLANS.

(a) A default service provider shall procure the electricity needed to provide default service only through a competitive procurement process or replacement procurement process approved by the Commission, with the following exceptions:

(1) Hourly priced service provided pursuant to § 54.187(e).

(2) Supply procured through RTO or ISO administered energy markets

<u>consistent with subsection (g), 54.187(i) or 54.188(e) (relating to</u> <u>Commission review of default service implementation plans).</u> A DSP SHALL ACQUIRE ELECTRIC GENERATION SUPPLY AT PREVAILING MARKET PRICES FOR DEFAULT SERVICE CUSTOMERS IN A MANNER CONSISTENT WITH PROCUREMENT AND IMPLEMENTATION PLANS APPROVED BY THE COMMISSION.

(b) A default service provider's DSP'S competitive procurement process PROCUREMENT PLAN shall adhere to the following standards:

(1) A default service provider's supplier affiliate may participate in any competitive procurement process. The default service provider shall propose and implement protocols to ensure that its supplier affiliate does not receive an advantage in either the solicitation and evaluation of competitive bids, or any other aspect of the competitive procurement process. The process shall comply with the codes of conduct promulgated by the Commission at §54.122 (relating to code of conduct).

(2) A default service provider's proposed competitive procurement process shall include:

(i) A bidding schedule.

(ii) A definition and description of the power supply products on which potential suppliers shall bid.

(iii) Bid price formats.

(iv) The time period during which the power will need to be

supplied for each power supply product.

(v) Bid submission instructions and format.

(vi) Bid evaluation criteria.

(vii) Relevant load data, including the following:

(A) Aggregated customer hourly usage data for all retail customers.

(B) Number of retail customers.

(C) Capacity peak load contribution figures by rate schedule.
 (D) Historical monthly retention figures by rate schedule.
 (E) Estimated loss factors by rate schedule.

(F) Customer size distribution by rate schedule.

(1) THE PROCUREMENT PLAN MUST BE DESIGNED TO ACQUIRE ELECTRIC GENERATION SUPPLY AT PREVAILING MARKET PRICES TO MEET THE DSP'S ANTICIPATED DEFAULT SERVICE OBLIGATION AT REASONABLE COSTS.

(2) DSPS WITH LOADS OF 50 MW OR LESS SHALL EVALUATE THE COST AND BENEFITS OF JOINING WITH OTHER DSPS OR AFFILIATES IN CONTRACTING FOR ELECTRIC SUPPLY.

(4) ELECTRIC GENERATION SUPPLY SHALL BE ACQUIRED BY COMPETITIVE BID SOLICITATION PROCESSES, SPOT MARKET ENERGY PURCHASES, OR A COMBINATION OF BOTH.

17

(5) THE DSP'S SUPPLIER AFFILIATE MAY PARTICIPATE IN A COMPETITIVE BID SOLICITATION PROCESS USED AS PART OF THE PROCUREMENT PLAN SUBJECT TO THE FOLLOWING CONDITIONS:

(I) THE DSP SHALL PROPOSE AND IMPLEMENT PROTOCOLS TO ENSURE THAT ITS SUPPLIER AFFILIATE DOES NOT RECEIVE AN ADVANTAGE IN THE SOLICITATION AND EVALUATION OF COMPETITIVE BIDS, OR OTHER ASPECT OF THE IMPLEMENTATION PLAN.

(II) THE COMPETITIVE BID SOLICITATION PROCESS SHALL COMPLY WITH THE CODES OF CONDUCT PROMULGATED BY THE COMMISSION AT § 54.122 (RELATING TO CODE OF CONDUCT).

(c) <u>A default service provider may employ a third-party to design and</u> <u>implement the competitive procurement process.</u> A DSP'S IMPLEMENTATION PLAN SHALL ADHERE TO THE FOLLOWING STANDARDS:

(1) A COMPETITIVE BID SOLICITATION PROCESS USED AS PART OF THE DEFAULT SERVICE IMPLEMENTATION PLAN SHALL PROVIDE, TO THE EXTENT APPLICABLE AND AT THE APPROPRIATE TIME, THE FOLLOWING INFORMATION TO SUPPLIERS:

(I) A BIDDING SCHEDULE.

(II) A DEFINITION AND DESCRIPTION OF THE POWER SUPPLY PRODUCTS ON WHICH POTENTIAL SUPPLIERS SHALL BID.

(III) BID PRICE FORMATS.

(IV) A TIME PERIOD DURING WHICH THE POWER WILL NEED TO BE SUPPLIED FOR EACH POWER SUPPLY PRODUCT.

(V) BID SUBMISSION INSTRUCTIONS AND FORMAT.(VI) PRICE-DETERMINATIVE BID EVALUATION CRITERIA.

(VII) CURRENT LOAD DATA FOR RATE SCHEDULES OR MAXIMUM REGISTERED PEAK LOAD GROUPINGS, INCLUDING THE FOLLOWING:

(A) HOURLY USAGE DATA.

(B) NUMBER OF RETAIL CUSTOMERS.

(C) CAPACITY PEAK LOAD CONTRIBUTION FIGURES.

(D) HISTORICAL MONTHLY RETENTION FIGURES.

(E) ESTIMATED LOSS FACTORS.

(F) CUSTOMER SIZE DISTRIBUTION.

(2) THE DEFAULT SERVICE IMPLEMENTATION PLAN SHALL INCLUDE FAIR AND NON-DISCRIMINATORY BIDDER QUALIFICATION REQUIREMENTS, INCLUDING FINANCIAL AND OPERATIONAL QUALIFICATIONS, OR OTHER REASONABLE ASSURANCES OF A SUPPLIER OF ELECTRIC GENERATION SERVICES' ABILITY TO PERFORM.

(3) A COMPETITIVE BID SOLICITATION PROCESS USED AS PART OF THE IMPLEMENTATION PLAN SHALL BE SUBJECT TO MONITORING BY THE COMMISSION OR AN INDEPENDENT THIRD PARTY EVALUATOR SELECTED BY THE DSP IN CONSULTATION WITH THE COMMISSION. A THIRD PARTY EVALUATOR SHALL OPERATE AT THE DIRECTION OF THE COMMISSION. 'COMMISSION STAFF AND A THIRD PARTY EVALUATOR INVOLVED IN MONITORING THE PROCUREMENT PROCESS SHALL HAVE FULL ACCESS TO ALL INFORMATION PERTAINING TO THE COMPETITIVE PROCUREMENT PROCESS, EITHER REMOTELY OR WHERE THE PROCESS IS ADMINISTERED. A THIRD PARTY EVALUATOR RETAINED FOR PURPOSES OF MONITORING THE COMPETITIVE PROCUREMENT PROCESS SHALL BE SUBJECT TO CONFIDENTIALITY AGREEMENTS IDENTIFIED IN § 54.185(D)(6).

(4) THE DSP OR THIRD PARTY EVALUATOR SHALL REVIEW AND SELECT WINNING BIDS PROCURED THROUGH A COMPETITIVE BID SOLICITATION PROCESS IN A NON-DISCRIMINATORY MANNER BASED ON THE PRICE DETERMINATIVE BID EVALUATION CRITERIA SET FORTH CONSISTENT WITH SUBSECTION (C)(1)(VI).

(5) THE BIDS SUBMITTED BY A SUPPLIER IN RESPONSE TO A COMPETITIVE BID SOLICITATION PROCESS SHALL BE TREATED AS CONFIDENTIAL PURSUANT TO THE CONFIDENTIALITY AGREEMENT APPROVED BY THE COMMISSION PURSUANT TO § 54.185(D)(6). THE DSP, THE COMMISSION, AND A THIRD PARTY INVOLVED IN THE ADMINISTRATION, REVIEW OR MONITORING OF THE BID SOLICITATION PROCESS SHALL BE SUBJECT TO THIS CONFIDENTIALITY PROVISION.

(d) The competitive procurement process may be subject to direct oversight by the Commission or an independent third party. Any third party shall report to the Commission. Commission staff and any third party involved in oversight of the procurement process shall have full access to all information pertaining to the competitive procurement process, and may monitor the process either remotely or where the process is administered. Any third party retained for purposes of monitoring the competitive procurement process shall be subject to confidentiality agreements identified in §54.185(k). THE DSP MAY PETITION FOR MODIFICATIONS TO THE APPROVED PROCUREMENT AND IMPLEMENTATION PLANS WHEN MATERIAL CHANGES IN WHOLESALE ENERGY MARKETS OCCUR TO ENSURE THE ACQUISITION OF SUFFICIENT SUPPLY AT PREVAILING MARKET PRICES. THE DSP SHALL MONITOR CHANGES IN WHOLESALE ENERGY MARKETS TO ENSURE THAT ITS PROCUREMENT PLAN CONTINUES TO REFLECT THE INCURRENCE OF REASONABLE COSTS, CONSISTENT WITH 66 PA.C.S. § 2807(E)(3) (RELATING TO THE DUTIES OF ELECTRIC DISTRIBUTION COMPANIES).

(e) The default service provider shall evaluate and select winning bids in a non-discriminatory manner based on bid evaluation criteria set forth consistent with subsection (b)(2)(vi).

(f) The Commission will review the acquisition of generation supply and verify compliance with the approved competitive procurement process as follows:

(1) The Commission's review will occur within a time period as specified in the approved competitive procurement process.

(2) The review period may not be less than 3-business days.

(3) The Commission's verification of compliance with an approved competitive procurement process will constitute its certification of the default service provider's compliance with the approved default service implementation plan.

(g) If the implementation of a competitive procurement process under this section does not result in sufficient electric supply to meet the default service provider's full load requirements, the default service provider shall repeat the competitive procurement process. The default service provider may petition for necessary changes to the previously approved competitive procurement process to ensure the acquisition of sufficient supply. When necessary to procure electric generation supply before the completion of another competitive procurement process, a default service provider shall acquire supply at prevailing market prices and shall fully recover reasonable costs associated with this activity. In this circumstance, the prevailing market price shall be the price of electricity in the RTO or ISO's administered energy markets in whose control area that service is being provided. The default service provider shall follow acquisition strategies that reflect the incurrence of reasonable costs, consistent with 66 Pa. C.S. §2807(e)(3) (relating to the duties of electric distribution companies), when selecting from the various options available in these energy markets.

(h) The bids submitted by a supplier under the competitive procurement process shall be treated as confidential through the expiration date identified in the confidentiality agreement approved by Commission pursuant to §54.185(k). The default

21

-

service provider, the Commission, and any third party involved in the administration, review or monitoring of the procurement process, shall be subject to this confidentiality provision.

§ 54.187. Default service rates RATE DESIGN and the recovery of reasonable costs.

(a) The costs incurred for providing default service shall be recovered through the following mechanisms or charges:

(1) The generation supply charge is a nonreconcilable charge that includes all reasonable costs associated with the acquisition of generation supply, exclusive of the costs of generation supply recovered through paragraph (3), to meet default service demand. The associated costs with this charge include:

(i) The prevailing market price of energy.

(ii) The prevailing market price of RTO or ISO capacity or any similar obligation.

(iii) FERC-approved ancillary services and transmission charges. (iv) Required RTO or ISO charges.

(v) Applicable taxes.

(vi) Other reasonable, identifiable generation supply acquisitioncosts.

(2) The customer charge is a nonreconcilable, fixed charge, set on a per customer class basis, that includes all identifiable, reasonable costs associated with providing default service to an average member of that class, exclusive of generation supply costs and costs recovered through paragraph (3). The associated costs with this charge include:

> (i) Default service related costs for customer billing, collections, customer service, meter reading, and uncollectible debt. (ii) A reasonable return or risk component for the default service provider.

> > .

666193

(iii) Applicable taxes.

(iv) Other reasonable and identifiable administrative or regulatoryexpenses.

(3) A default service provider shall use an automatic energy adjustment clause, consistent with 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments) to recover reasonable costs incurred through compliance with the Alternative Energy Portfolio Standards Act (73 P.S. §§ 1648.1 1648.7).

(4) The costs recovered through the preceding charges and mechanisms may not be recovered by an EDC acting as a default service provider through its <u>Commission approved distribution rates.</u> THE COSTS INCURRED FOR PROVIDING DEFAULT SERVICE SHALL BE RECOVERED THROUGH A DEFAULT SERVICE RATE SCHEDULE. THE RATE SCHEDULE SHALL BE DESIGNED TO RECOVER FULLY ALL REASONABLE COSTS INCURRED BY THE DSP DURING THE PERIOD DEFAULT SERVICE IS PROVIDED TO CUSTOMERS, BASED ON THE AVERAGE COST TO ACQUIRE SUPPLY FOR EACH CUSTOMER CLASS.

(b) <u>A default service plan must include a fixed rate option for all residential</u> <u>customers.</u> EXCEPT FOR RATES AVAILABLE CONSISTENT WITH 54.187(F), A DEFAULT SERVICE CUSTOMER SHALL BE OFFERED A SINGLE RATE OPTION, WHICH SHALL BE IDENTIFIED AS THE PTC AND DISPLAYED AS A SEPARATE LINE ITEM ON A CUSTOMER'S MONTHLY BILL.

(c) <u>A-default service implementation plan must include a fixed rate option for</u> <u>nonresidential default service customers whose load test indicates a registered peak</u> <u>demand of 500 or less kilowatts.</u> THE RATES CHARGED FOR DEFAULT SERVICE MAY NOT DECLINE WITH THE INCREASE IN KILOWATT HOURS OF ELECTRICITY USED BY A DEFAULT SERVICE CUSTOMER IN A BILLING PERIOD.

(d) The default service provider shall include an hourly rate in its implementation plan for all default service customers whose load test indicates a

registered peak demand of greater than 500 kilowatts. The default service provider may propose a fixed rate for these customers in its default service implementation plan. THE PTC SHALL BE DESIGNED TO RECOVER ALL DEFAULT SERVICE COSTS, INCLUDING GENERATION, TRANSMISSION, AND OTHER DEFAULT SERVICE COST ELEMENTS, INCURRED IN SERVING THE AVERAGE MEMBER OF A CUSTOMER CLASS. AN EDC'S DEFAULT SERVICE COSTS MAY NOT BE RECOVERED THROUGH THE DISTRIBUTION RATE. COSTS CURRENTLY RECOVERED THROUGH THE DISTRIBUTION RATE, WHICH ARE REALLOCATED TO THE DEFAULT SERVICE RATE, MAY NOT BE RECOVERED THROUGH THE DISTRIBUTION RATE. THE DISTRIBUTION RATE MUST BE REDUCED TO REFLECT COSTS REALLOCATED TO THE DEFAULT SERVICE RATE.

(e) The rate for hourly priced service shall include:

(1) The RTO's or ISO's LMP or the equivalent pricing mechanism.

(2) The prevailing market price of RTO or ISO capacity or any similar obligation.

(3) FERC-approved ancillary services and transmission charges.

(4) Required RTO or ISO charges.

(5) Applicable taxes.

(6) Other FERC-approved or reasonable, identifiable RTO or ISO charges and costs directly related to the hourly priced service.

(7) Other reasonable and identifiable administrative or regulatory expenses.

A DSP SHALL USE AN AUTOMATIC ENERGY ADJUSTMENT CLAUSE, CONSISTENT WITH 66 PA.C.S. § 1307 (PERTAINING TO SLIDING SCALES OF RATES; ADJUSTMENTS) AND 52 PA. CODE § 75.1, *ET SEQ*. (PERTAINING TO ALTERNATIVE ENERGY PORTFOLIO STANDARDS), TO RECOVER ALL REASONABLE COSTS INCURRED THROUGH COMPLIANCE WITH THE ALTERNATIVE ENERGY PORTFOLIO

-

STANDARDS ACT, 73 P.S. §1648.1, *ET SEQ*. THE USE OF AN AUTOMATIC ADJUSMENTT CLAUSE SHALL BE SUBJECT TO AUDIT AND ANNUAL REVIEW, CONSISTENT WITH 66 PA.C.S. §§ 1307(D) AND (E) (PERTAINING TO FUEL COST ADJUSTMENT AUDITS; AUTOMATIC ADJUSTMENT REPORTS AND PROCEEDINGS).

(f) The default service implementation plan must include rates that correspond to demand side response and demand side management programs available to retail customers in that EDC service territory. A DSP MAY USE AN AUTOMATIC ENERGY ADJUSTMENT CLAUSE TO RECOVER REASONABLE NON-ALTERNATIVE ENERGY DEFAULT SERVICE COSTS. THE USE OF AN AUTOMATIC ADJUSTMENT CLAUSE SHALL BE SUBJECT TO AUDIT AND ANNUAL REVIEW, CONSISTENT WITH 66 PA.C.S. §§ 1307(D) AND (E) (PERTAINING TO FUEL COST ADJUSTMENT AUDITS; AUTOMATIC ADJUSTMENT REPORTS AND PROCEEDINGS). A DSP MAY COLLECT INTEREST FROM RETAIL CUSTOMERS ON THE RECOVERIES OF UNDER COLLECTION OF DEFAULT SERVICE COSTS AT THE LEGAL RATE OF INTEREST. REFUNDS TO CUSTOMERS FOR OVER RECOVERIES SHALL BE MADE WITH INTEREST, AT THE LEGAL RATE OF INTEREST PLUS TWO PERCENT.

(g) The default service implementation plan may include mechanisms that allow default service providers to adjust their prices during the term of service to recover reasonable, incremental costs of significant changes in the number of default service customers or reasonable, incremental costs of other events that would materially prejudice the reliable provision of default service and the full recovery of reasonable eosts.__THE DEFAULT SERVICE RATE SCHEDULE SHALL INCLUDE RATES THAT CORRESPOND TO DEMAND SIDE RESPONSE AND DEMAND SIDE MANAGEMENT PROGRAMS, AS DEFINED AT 73 P.S. § 1648.2 (PERTAINING TO DEFINITIONS), WHEN THE COMMISSION MANDATES THESE RATES PURSUANT TO ITS AUTHORITY UNDER 66 PA.C.S. § 101, *ET SEQ*.

(h) The default service provider's projected and actual incurred costs for providing service may not be subject to Commission review and reconciliation except in extraordinary circumstances, or as provided in subsection (a)(3). DEFAULT SERVICE RATES SHALL BE ADJUSTED ON A QUARTERLY BASIS, OR MORE FREQUENTLY, FOR ALL CUSTOMER CLASSES WITH A MAXIMUM REGISTERED PEAK LOAD UP TO 25 KW, IN ORDER TO ENSURE THE RECOVERY OF COSTS REASONABLY INCURRED IN ACQUIRING ELECTRICITY AT PREVAILING MARKET PRICES AND TO REFLECT THE SEASONAL COST OF ELECTRICITY. DSPS MAY PROPOSE ALTERNATIVE DIVISIONS OF CUSTOMERS BY MAXIMUM REGISTERED PEAK LOAD TO PRESERVE EXISTING CUSTOMER CLASSES.

(i) When a generation supplier fails to deliver generation supply to a default service provider, the default service provider shall be responsible for acquiring replacement generation supply consistent with its Commission-approved replacement procurement process. When necessary to procure electric generation supply before the completion of the replacement procurement process, a default service provider shall acquire supply at prevailing market prices and shall fully recover all reasonable costs associated with this activity. In this circumstance, the prevailing market price will be the price of electricity in the RTO or ISO's administered energy markets in whose control area the default service is being provided. The default service provider shall follow acquisition strategies that reflect the incurrence of reasonable costs, consistent with 66 Pa. C.S. §2807(e)(3) (relating to duties of electric distribution companies), when selecting from the various options available in these energy markets. DEFAULT SERVICE RATES SHALL BE ADJUSTED ON A QUARTERLY BASIS, OR MORE FREQUENTLY, FOR ALL CUSTOMER CLASSES WITH A MAXIMUM REGISTERED PEAK LOAD OF 25 KW TO 500 KW, IN ORDER TO ENSURE THE **RECOVERY OF COSTS REASONABLY INCURRED IN ACQUIRING** ELECTRICITY AT PREVAILING MARKET PRICES AND TO REFLECT THE

SEASONAL COST OF ELECTRICITY. DSPS MAY PROPOSE ALTERNATIVE

26

.

DIVISIONS OF CUSTOMERS BY MAXIMUM REGISTERED PEAK LOAD TO PRESERVE EXISTING CUSTOMER CLASSES.

(J) DEFAULT SERVICE RATES SHALL BE ADJUSTED ON A MONTHLY BASIS, OR MORE FREQUENTLY, FOR ALL CUSTOMER CLASSES WITH A REGISTERED PEAK LOAD OF EQUAL TO OR GREATER THAN 500 KW IN ORDER TO ENSURE THE RECOVERY OF COSTS REASONABLY INCURRED IN ACQUIRING ELECTRICITY AT PREVAILING MARKET PRICES AND TO REFLECT THE SEASONAL COST OF ELECTRICITY. DSPS MAY PROPOSE ALTERNATIVE DIVISIONS OF CUSTOMERS BY REGISTERED PEAK LOAD TO PRESERVE EXISTING CUSTOMER CLASSES.

(K) WHEN A SUPPLIER FAILS TO DELIVER ELECTRIC GENERATION SUPPLY TO A DSP, THE DSP SHALL BE RESPONSIBLE FOR ACQUIRING REPLACEMENT ELECTRIC GENERATION SUPPLY CONSISTENT WITH ITS COMMISSION APPROVED CONTINGENCY PLAN. WHEN NECESSARY TO PROCURE ELECTRIC GENERATION SUPPLY BEFORE THE IMPLEMENTATION OF A CONTINGENCY PLAN, A DSP SHALL ACQUIRE SUPPLY AT PREVAILING MARKET PRICES AND SHALL FULLY RECOVER ALL REASONABLE COSTS ASSOCIATED WITH THIS ACTIVITY THAT ARE NOT OTHERWISE RECOVERED THROUGH ITS CONTRACT TERMS WITH THE DEFAULT SUPPLIER. THE DSP SHALL FOLLOW ACQUISITION STRATEGIES THAT REFLECT THE INCURRENCE OF REASONABLE COSTS, CONSISTENT WITH 66 PA.C.S. § 2807(E)(3) (RELATING TO DUTIES OF ELECTRIC DISTRIBUTION COMPANIES), WHEN SELECTING FROM THE VARIOUS OPTIONS AVAILABLE IN THESE ENERGY MARKETS.

§ 54.188. Commission review of default service implementation plans PROGRAMS AND RATES.

(a) A default service implementation plan PROGRAM shall WILL initially be referred to the Office of Administrative Law Judge for further proceedings as may be required.

(b) The Commission will issue an order within 6 7 months of a plan's PROGRAM'S filing with the Commission on whether the default service implementation plan PROGRAM demonstrates compliance with this subchapter and the provisions of 66 Pa.C.S. §§ 2801-2812 (relating to the Electricity Generation Customer Choice and Competition Act). The Commission may order modification of the terms of the proposed plan to ensure that a default service plan is compliant.

(c) <u>The Commission will evaluate the default service implementation plan to</u> <u>ensure that it includes a fair, transparent and non-discriminatory competitive procurement</u> <u>process for all potential suppliers provided under §54.186 (relating to default service</u> <u>supply procurement).</u> UPON ENTRY OF THE COMMISSION'S FINAL ORDER, A DSP SHALL ACQUIRE GENERATION SUPPLY FOR THE PERIOD OF SERVICE IN A MANNER CONSISTENT WITH THE TERMS OF THE APPROVED PROCUREMENT AND IMPLEMENTATION PLANS AND CONSISTENT WITH THE STANDARDS IDENTIFIED AT § 54.186 (RELATING TO DEFAULT SERVICE PROCUREMENT AND IMPLEMENTATION PLANS).

(d) Upon entry of the Commission's final of der, the default service provider shall acquire generation supply for the term of service in a manner consistent with the terms of the approved competitive procurement process provided under §54.186, and report the bids submitted by EGSs in writing to the Commission. UPON RECEIVING WRITTEN NOTICE, THE COMMISSION WILL HAVE 1 BUSINESS DAY, TO APPROVE OR DISAPPROVE THE RESULTS OF A COMPETITIVE BID SOLICITATION PROCESS USED BY A DSP AS PART OF ITS PROCUREMENT PLAN. WHEN THE COMMISSION DOES NOT ACT WITHIN 1 BUSINESS DAY THE RESULTS OF THE PROCESS WILL BE DEEMED APPROVED. THE

COMMISSION WILL NOT CERTIFY OR OTHERWISE APPROVE OR DISAPPROVE A DSP'S SPOT MARKET ENERGY PURCHASES MADE PURSUANT TO A COMMISSION-APPROVED PROCUREMENT PLAN. THE COMMISSION WILL MONITOR THE DSP'S ADHERENCE TO THE TERMS OF THE APPROVED DEFAULT SERVICE PROGRAM AND 66 PA.C.S. §§ 2801-2812 (RELATING TO THE ELECTRICITY GENERATION CUSTOMER CHOICE AND COMPETITION ACT). THE COMMISSION MAY, IN ITS DISCRETION, INITIATE AN INVESTIGATION REGARDING IMPLEMENTATION OF THE DSP'S DEFAULT SERVICE PROGRAM AND, AT THE CONCLUSION OF THE INVESTIGATION, ORDER REMEDIES AS MAY BE LAWFUL AND APPROPRIATE. THE COMMISSION WILL NOT DENY THE DSP THE **RECOVERY OF ITS REASONABLE COSTS FOR PURCHASES MADE PURSUANT** TO AN APPROVED COMPETITIVE PROCUREMENT PROCESS UNLESS THE DSP CONCEALED OR MISLED THE COMMISSION REGARDING ITS ADHERENCE TO THE PROGRAM, OR OTHERWISE VIOLATED THE PROVISIONS OF THIS SUBCHAPTER OR 66 PA.C.S. §§ 101, ET SEQ.

(c) The Commission will certify the results of a competitive procurement process in their entirety or reject them due to noncompliance with the approved procurement process. If the Commission rejects the results due to noncompliance, the default service provider shall repeat the approved competitive procurement process. When necessary to procure electric generation supply before the completion of the subsequent competitive procurement process, a default service provider shall acquire supply at prevailing market prices and shall fully recover all reasonable costs associated with this activity. In this circumstance, the prevailing market price will be the price of electricity in the RTO or ISO's administered energy markets in whose control area that service is being provided. The default service provider shall follow acquisition strategies that reflect the incurrence of reasonable costs, consistent with 66 Pa. C.S. §2807(e)(3) (relating to duties of electric distribution companies), when selecting from the various options available in these energy markets. A DSP SHALL ADHERE TO THE FOLLOWING PROCEDURES IN OBTAINING APPROVAL OF DEFAULT SERVICE RATES AND PROVIDING NOTICE TO DEFAULT SERVICE CUSTOMERS:

(1) A DSP SHALL PROVIDE ALL CUSTOMERS NOTICE OF THE FILING OF A DEFAULT SERVICE PROGRAM IN A SIMILAR MANNER AS FOUND AT 52 PA. CODE § 53.68 (RELATING TO NOTICE REQUIREMENTS).

(2) A DSP SHALL PROVIDE ALL CUSTOMERS NOTICE OF THE INITIAL DEFAULT SERVICE RATES AND TERMS AND CONDITIONS OF SERVICE 60 DAYS BEFORE THEIR EFFECTIVE DATE, OR 30 DAYS AFTER BIDDING HAS CONCLUDED, WHICHEVER IS SOONER, UNLESS ANOTHER TIME PERIOD IS APPROVED BY THE COMMISSION. THE DSP SHALL PROVIDE WRITTEN NOTICE TO THE NAMED PARTIES IDENTIFIED IN § 54.185(B) (PERTAINING TO DEFAULT SERVICE PROGRAMS) CONTAINING AN EXPLANATION OF THE METHODOLOGY USED TO CALCULATE THE PRICE FOR ELECTRIC SERVICE.

(3) AFTER THE INITIAL STEPS OF A DEFAULT SERVICE PROCUREMENT AND IMPLEMENTATION PLAN ARE COMPLETED, THE DSP SHALL FILE WITH THE COMMISSION TARIFF SUPPLEMENTS DESIGNED TO REFLECT, FOR EACH CUSTOMER CLASS, THE RATES TO BE CHARGED FOR DEFAULT SERVICE. THE TARIFF SUPPLEMENTS SHALL BE ACCOMPANIED BY SUPPORTING DOCUMENTATION ADEQUATE TO DEMONSTRATE ADHERENCE TO THE PROCUREMENT PLAN APPROVED BY THE COMMISSION, THE PROCUREMENT PLAN RESULTS AND THE TRANSLATION OF THOSE RESULTS INTO CUSTOMER RATES.

(4) A CUSTOMER OR PARTY IDENTIFIED IN § 54.185(B) MAY
 FILE EXCEPTIONS TO THE INITIAL DEFAULT SERVICE TARIFFS
 WITHIN 20 DAYS OF THE DATE THE TARIFFS ARE FILED WITH THE

COMMISSION. THE EXCEPTIONS SHALL BE LIMITED TO WHETHER THE DSP PROPERLY IMPLEMENTED THE PROCUREMENT PLAN APPROVED BY THE COMMISSION AND ACCURATELY CALCULATED THE RATES. THE COMMISSION WILL RESOLVE FILED EXCEPTIONS BY ORDER. THE COMMISSION MAY ALLOW THE DEFAULT RATES TO BECOME EFFECTIVE PENDING THE RESOLUTION OF THOSE EXCEPTIONS.

(f)Upon completion of the competitive procurement process, the default service provider shall provide written notice to default service customers and the named parties identified in §54.185(b) (relating to default service implementation plans and terms of service) of the Commission-certified default service prices and terms and conditions of service no later than 60 days before their effective date, unless another time period is approved by the Commission. The default service provider shall also provide written notice to the named parties identified in §54.185(b) containing an explanation of the methodology used to calculate the price for electric service. A DSP SHALL SUBMIT TARIFF SUPPLEMENTS ON A QUARTERLY OR MORE FREQUENT BASIS, CONSISTENT WITH § 54.187 (H) AND (I) (PERTAINING TO DEFAULT SERVICE RATE DESIGN AND RECOVERY OF REASONABLE COSTS), TO REVISE DEFAULT SERVICE RATES TO ENSURE THE RECOVERY OF COSTS REASONABLY INCURRED IN ACQUIRING ELECTRICITY AT PREVAILING MARKET PRICES. THE DSP SHALL PROVIDE WRITTEN NOTICE TO THE NAMED PARTIES IDENTIFIED IN § 54.185(B) OF THE PROPOSED RATES AT THE TIME OF THE TARIFF FILINGS. THE TARIFF SUPPLEMENTS SHALL BE POSTED TO THE DSP'S PUBLIC INTERNET DOMAIN AT THE TIME THEY ARE FILED WITH THE COMMISSION. A CUSTOMER OR THE PARTIES IDENTIFIED IN § 54.185(B) MAY FILE EXCEPTIONS TO THE DEFAULT SERVICE TARIFFS WITHIN 20 DAYS OF THE DATE THE TARIFFS ARE FILED WITH THE COMMISSION. THE EXCEPTIONS SHALL BE LIMITED TO WHETHER THE DSP HAS PROPERLY IMPLEMENTED THE PROCUREMENT PLAN APPROVED BY

THE COMMISSION AND ACCURATELY CALCULATED THE RATES. THE DSP SHALL POST THE REVISED PTC FOR EACH CUSTOMER CLASS WITHIN 1 BUSINESS DAY OF ITS EFFECTIVE DATE TO ITS PUBLIC INTERNET DOMAIN TO ENABLE CUSTOMERS TO MAKE AN INFORMED DECISION ABOUT ELECTRIC GENERATION SUPPLY OPTIONS.

(g) A default service provider may petition for a waiver of any part of this subchapter, in a manner consistent with §5.43 (relating to petitions for issuance, amendment or waiver of regulations). The Commission may grant waivers of these subchapter to ensure the reliable provision of default service and to enforce and carry out the provisions of 66 Pa. C.S. §§2801-2812 and other applicable laws.

§ 54.189. Default service customers.

(a) At the conclusion of an EDC's Commission approved generation rate cap, retail customers who are not receiving generation service from an EGS shall be assigned to the Commission-approved default service implementation plan DSP IN THAT SERVICE TERRITORY.

(b) A default service provider DSP shall accept applications for default service from new retail customers WHEN THE CUSTOMERS COMPLY WITH COMMISSION REGULATIONS PERTAINING TO APPLICATIONS FOR SERVICE, INCLUDING THOSE AT § 56.1, *ET SEQ*. (PERTAINING TO STANDARDS AND BILLING PRACTICES FOR RESIDENTIAL CUSTOMERS) and retail customers who switch from an EGS, if the customers comply with all Commission regulations pertaining to applications for service SHALL ACCEPT ALL RETAIL CUSTOMERS ASSIGNED TO ITS DEFAULT SERVICE WHO SWITCH FROM AN EGS.

(c) A default service provider DSP shall treat a customer who leaves an EGS and applies for default service as it would a new applicant for default service.

(d) A default service customer may choose to receive its generation service from an EGS at any time, if the customer complies with all Commission regulations

pertaining to changing generation service providers AT § 57.1, ET SEQ. (PERTAINING TO ELECTRIC SERVICE).

(e) A default service provider DSP may not charge a fee to a retail customer that changes FOR CHANGING its generation service provider in a manner consistent with Commission regulations.

CHAPTER 57. ELECTRIC SERVICE Subchapter M: STANDARDS FOR CHANGING A CUSTOMER'S ELECTRICITY GENERATION SUPPLIER

§ 57.178. [Provider of Last Resort] Default service provider.

This subchapter does not apply when the customer's service is discontinued by the EGS and subsequently provided by the [provider of last resort] <u>default service provider</u> because no other EGS is willing to provide service to the customer.

The Honorable John R. McGinley, Jr. Chairman Independent Regulatory Review Commission 14th Floor, Harristown II 333 Market Street Harrisburg, PA 17101

> Re: L-00040169/57-237 Final Rulemaking Electric Distribution Companies' Obligation to Serve Retail Customers at the Conclusion of the Transition Period 52 Pa. Code Chapter 54

Dear Chairman McGinley:

Enclosed please find one (1) copy of the regulatory documents concerning the above-captioned rulemaking. Under Section 745.5(a) of the Regulatory Review Act, the Act of June 30, 1989 (P.L. 73, No. 19) (71 P.S. §§745.1-745.15) the Commission, on February 14, 2005, submitted a copy of the Notice of Proposed Rulemaking to the House Committee on Consumer Affairs, the Senate Committee on Consumer Protection and Professional Licensure and to the Independent Regulatory Review Commission (IRRC). This notice was published at 35 *Pa.B.* 1421, on February 26, 2005. In compliance with Section 745.5(b.1) copies of all comments received were provided to your Commission and the Committees.

-

In preparing this final form rulemaking, the Public Utility Commission has considered all comments received from the Committees, IRRC and the public.

Very truly yours,

Offendell 3. Spland

Wendell F. Holland Chairman
