Dear Environmental Quality Board:

Pennsylvania is one of the worst states in air quality. This is a major health concern. As one who suffers from asthma, I know what a public harm is the result of our weak standards.

Pollution from cars and trucks is the major contributor to this problem. Ironically, technology exists today that would allow these vehicles to run cleaner and reduce air pollution.

This letter is to urge you to move ahead as quickly as possible in implementing the Pennsylvania Clean Vehicles program. By moving forward we could reduce smog forming pollution by ten percent, benzene pollution by 15 percent, and warming emissions by 25% by 2025. This stands in stark improvement to the lower Federal Clean Air Standards. Because of an improved standard, Pennsylvania citizens will have higher mileage vehicles and a significant cost saving.

Please move forward with the Pennsylvania Clean Vehicles Program. Pennsylvanians deserve it, I need it.

Sincerely,  
Richard G. Mulvaney
