To the Environmental Quality Board

I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Thank you.

Sincerely,

Name Mary Beach

Dear _____

I urge you to continue your work to protect the health of babies by opposing HB 2610 and SB 1201 aimed at stopping the Pennsylvania Mercury Rule. I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

HB 2610 and SB 1201 do nothing to clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades. The illegal federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Thank you.

To the Environmental Quality Board

I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

Dear _____

I urge you to continue your work to protect the health of babies by opposing HB 2610 and SB 1201 aimed at stopping the Pennsylvania Mercury Rule. I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

HB 2610 and SB 1201 do nothing to clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades. The illegal federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. Please send completed card to PennFuture, 610 N. Third St., Harrisburg, PA 17101 by August 22; we will deliver to the Environmental Quality Board on your behalf.

I support the DEP's proposed Pennsylvania Mercury Rule!

- Mercury from power plants is toxic. Even small amounts can harm our most vulnerable: developing babies and children.
- Pennsylvania power plants account for 83% of the state's mercury pollution, and are the second worst in the nation.
- Mercury pollution falls out close to the source, leaving us with dangerous areas of high contamination near power plants.
- The federal rule fails to protect us, allowing dirty plants to buy pollution credits from clean ones in other states.

Please send completed card to PennFuture, 610 N. Third St., Harrisburg, PA 17101 by **August 22**; we will deliver to the Environmental Quality Board on your behalf.

I support the DEP's proposed Pennsylvania Mercury Rule!

- Mercury from power plants is toxic. Even small amounts can harm our most vulnerable: developing babies and children.
- Pennsylvania power plants account for 83% of the state's mercury pollution, and are the second worst in the nation.
- Mercury pollution falls out close to the source, leaving us with dangerous areas of high contamination near power plants.
- The federal rule fails to protect us, allowing dirty plants to buy pollution credits from clean ones in other states.

Dear _____

I urge you to continue your work to protect the health of babies by opposing HB 2610 and SB 1201 aimed at stopping the Pennsylvania Mercury Rule. I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

HB 2610 and SB 1201 do nothing to clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades. The illegal federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Please oppose HB 2610 and SB 1201 which would block a Pennsylvania Mercury Rule.

Thank you.

Sincerely,

To the Environmental Quality Board

I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Thank you.

Sincerely,

Name Gaza Barr

Dear _____

I urge you to continue your work to protect the health of babies by opposing HB 2610 and SB 1201 aimed at stopping the Pennsylvania Mercury Rule. I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

HB 2610 and SB 1201 do nothing to clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades. The illegal federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. **Commonwealth of Pennsylvania
Environmental Quality Board**

I fully support the proposed rule of the Department of Environmental Protection (DEP) to reduce mercury emissions, and I want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the **second worst** mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted to allow the DEP to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts.

I support the state-specific rule to reduce mercury emissions without using cap-and-trade mechanisms.

Thank you.

Sincerely,

Name Elizabeth Killough

**Commonwealth of Pennsylvania
Environmental Quality Board**

I fully support the proposed rule of the Department of Environmental Protection (DEP) to reduce mercury emissions, and I want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the second worst mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted to allow the DEP to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts.

I support the state-specific rule to reduce mercury emissions without using cap-and-trade mechanisms.

Thank you.

Sincerely,

To the Environmental Quality Board

I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Thank you.

I fully support the proposed rule of the Department of Environmental Protection (DEP) to reduce mercury emissions, and I want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the **second worst** mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted to allow the DEP to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts.

I support the state-specific rule to reduce mercury emissions without using cap-and-trade mechanisms.

Thank you.

Sincerely,

**Commonwealth of Pennsylvania
Environmental Quality Board**

I fully support the proposed rule of the Department of Environmental Protection (DEP) to reduce mercury emissions, and I want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the second worst mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted to allow the DEP to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts.

I support the state-specific rule to reduce mercury emissions without using cap-and-trade mechanisms.

Thank you.

Sincerely,

Legislation aimed at stopping DEP's Pennsylvania Mercury Rule is harmful! I oppose HB 2610 and SB 1201 because:

- These bills won't clean up toxic mercury. Instead, they require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades and allows mercury hotspots near dirty power plants to continue.
- Pennsylvania power plants are now the nation's 2nd worst mercury polluters and make 83% of mercury air pollution in the state.
- Babies are at high risk of lifetime problems from mercury — it can destroy their developing brains before and after birth.

Please send completed card to PennFuture, 610 N. Third St., Harrisburg, PA 17101 by August 22; we will deliver to the Environmental Quality Board on your behalf.

I support the DEP's proposed Pennsylvania Mercury Rule!

- Mercury from power plants is toxic. Even small amounts can harm our most vulnerable: developing babies and children.
- Pennsylvania power plants account for 83% of the state's mercury pollution, and are the second worst in the nation.
- Mercury pollution falls out close to the source, leaving us with dangerous areas of high contamination near power plants.
- The federal rule fails to protect us, allowing dirty plants to buy pollution credits from clean ones in other states.
