RE: Mercury Emission Reduction for Electric Generating Units (#7-405)  
Fluoridation of Water

Gentlemen:

We urge your attention to a critical matter regarding the excessive mercury poisoning our beautiful streams, fish, water and air. It is important that ALL COAL PLANTS REDUCE THEIR MERCURY POLLUTION **immediately.** **It affects our children most of all, but we all suffer, and so do all our food sources, Help us improve our environment.**

**With regard to fluoridation of water, it is appalling that a City can force taxpayers to fund a chemical additive program to their drinking water, when any such plan was overwhelmingly rejected by the citizens. It is a dangerous poison of no use to adults, and could readily be applied to children's dental treatment if their caretakers were in agreement, as part of a school physical admission program. HELP US IN ALLENTOWN.** In addition to paying to destroy our own health and environment, we have to **BUY** water for drinking, cooking and coffee/tea. How ridiculous.

What can we do to overturn this wrong...
