Dear Environmental Quality Board,

As the current administration in Washington continues its onslaught of our environment, we in Pennsylvania are now looking to our State government for higher mandates for clean water, air, etc. We are hoping that you do not cave to the lobbyists of polluting corporations - but will actually have the well-being of the constituents at heart.

My husband and I applaud the Pennsylvania Department of Environment Protection for its proposal to cut mercury emissions by 90% by 2015. We KNOW mercury emissions are particularly dangerous to pregnant women and children at several levels. Learning disabilities are no small thing. As a reading specialist, I daily witnessed the pain and trials of students trying to succeed with that affliction.

Please support this 90% by 2015 policy - and oppose a mercury 'trading' policy that permits plants to avoid emission reductions.

Thank you,

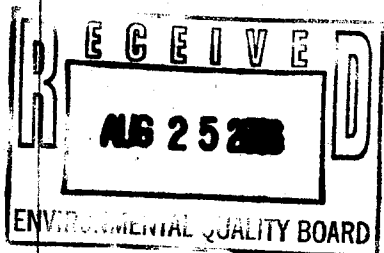

Erika Martin & Jeff Chappelle

Dear EQB,

I am writing to you out of concern for our environment. I'm sure you get lots of tree-hugger mail regularly, well I ain't no tree hugger, but I want you to know I am not for polluting PA's waterways with mercury! Please consider my plea as not ~~a~~ from a whining citizen, but as a fellow human being who wants the best for our planet and all residing on it. Our desire for material goods and money has led to the type of greed & selfishness that has caused wars, and genocide in our past. Please don't repeat history, and be sure to DENY any pollution trading programs because there is honestly no price on human life. As an eighteen year old man I have my life ahead of me, and would hate to see myself or anyone I know get cancer or another fatal illness simply because some corporate hot-shot wanted to save an extra ten million bucks. This probably has as much impact as the plea of a lowly Serf to his emperor to save his life from the claws of the tigers within the Colosseum of ancient Rome, but still I plead you listen to me. Every body's thinkin it, I've just got the balls to say it.

Stop Killing your own ^{species} races, and cut down on mercury ~~emissions~~ emissions. For mankind's sake.

Paul Kline

Re: Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)

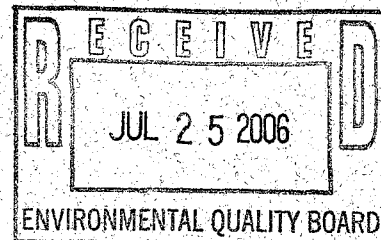

Date: July 11, 2006

I support the DEP proposal to require coal fired power plants to cut their mercury emissions by 90 percent by 2015. I urge to oppose all pollution trading plans and to make sure that all coal plants reduce their mercury pollution. This is a health concern for myself and my family.

Sincerely,

Jane Freund

I am writing to urge the EPA
to step up and approve your Rowell's
proposed mercury regulations.

The federal government has turned
the country over to the polluters.
The states must act on the behalf
of the citizen.

Mercury above the water level
it is too dangerous to let it keep
accumulating in the environment.

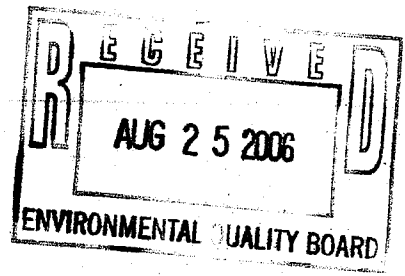

Sincerely yours,
Alan H. H. H. H.

Aug 14 2006

Dear C2B,

Please support the DCF proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. The quality of the water we drink and the fish we eat is important to me. Not only for myself but for the future well being of my children.

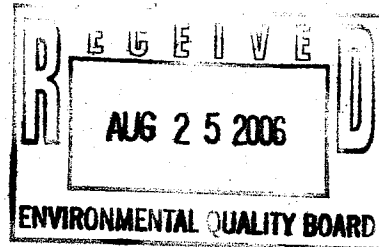

Sincerely,
P. Morris
245 N Belfield

Dear EQB,

Please be aware that I support the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by the year 2015. Our childrens health is at stake. Please oppose any pollution trading plan. Make sure all coal plants reduce their mercury pollution.

Sincerely,
Debbie Lepore

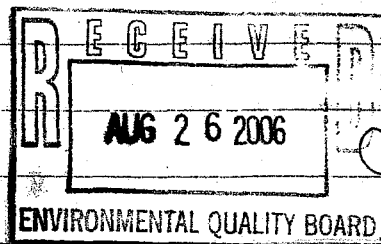

Mercury Emission Reduction Requirements For Electric
Generating Units (#7-405)

To those at the Environmental Quality Board -

As residents of PA who enjoy outdoor activities
we are concerned about the health quality of our
local & global environment.

We have a new infant & it's such a wonder to
see a tiny, brand new human body; discouraging
to realize just how many toxins she will be
exposed to no matter how carefully we select her
foods, soaps, etc. It's supposed to be my job to
keep her healthy, but that's impossible with today's
contaminates & the accumulation of the last few
decades.

Please support the DEP proposal to require
coal plants to cut their mercury emissions by
90% by 2015 and to ensure that everyone is
responsible for their own pollution - no trading
credits.

Ladies + Gentlemen,

We need to place serious consideration in trying clean up the coal emissions. We have the technology to do this, + electric companies certainly can afford it. Lets fight this problem now while we can + pay a little bit more attention to our environment. If we put it off now, it will only cost us more later. I support the DEP proposal + wish you would also. Lets not let big money make this type of decision.

has autism, I'm very concerned about
mercury emissions and its effects on
my children

Dina C. Smith

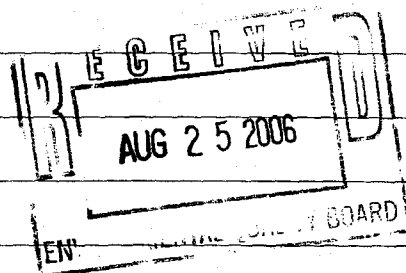

328 Steel Road
Havertown, PA 19083

To Whom it May Concern,

I Am writing to you in regards to Mercury (Emission Reduction). I am in favor of the DEP proposal, not the EPA plan of trading. This trading will not clean up our area from mercury. We have too much mercury contamination in our state. Mercury is a poison that accumulates in our bodies + is especially harmful to children + babies. You cannot eat much of the fish caught in our state since they contain high levels of mercury. We need to clean up our state, the sooner the better, not continue on polluting with no regards to the future. Today's world is too concerned with the Almighty Dollar + greed, rather than the health of its citizens. Please push for the DEP proposal.

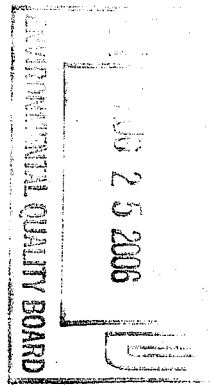

Thank you

I intend to research more
on this matter, before
making any other comments
or discussions. Having
written down your address,
I will send in future
comments.

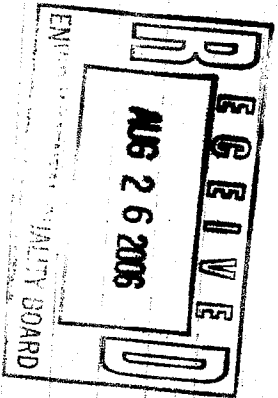

Mr. D. Costa

Environmental Quality Board,

We strongly oppose any pollution trading plan. This action is completely unacceptable, not only to ourselves but to our daughter and her health. We ask that you consider alternative ways to eliminate this.

As for the amount of mercury pollution, another large area of concern, we ask for ways for all coal plants to make an effort to reduce this risk.

Garet Beachwee
358 Calverlee St
Lupton, Pa 19562
Berks County

Ms. Dolores Hartley

I support The DEP
proposal To Require
Coal fired power plants
To cut mercury
emissions 90% by 2015.

Our children's
health is at stake.

Please oppose
any pollution plan and
make sure all coal
plants reduce their
mercury pollution.

Sincerely

Mrs. Dolores Hartley

211 Sannyside Ave.

Trooper, Pa. 19403

Bethlehem, Pa 18020

To whom this may concern,

I am very unhappy with the pollutant regulations as they stand what really caught me by surprise is the trading of credits from companies to ease their trouble with cooperating with pollution standards who are the companies to tell me ^{they} can legally pollute my air without my approval. Vote for the DEP proposal or I promise that it will be the last vote you ever make because I'll just pull the big D lever come election time. Trust me I know you don't like that. And have a nice day. I hope you can sleep well and breathe easy at night knowing that you are being legally poisoned. Thanks.

yours truly,

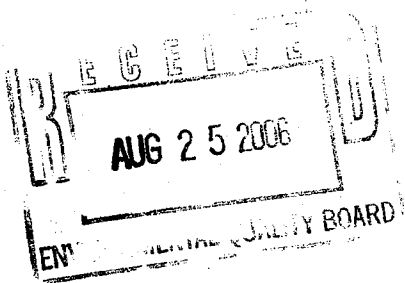

Colin Kellan

To: PA Environmental Quality Board

From: Bill Forsyth
119 Wyndmoor Road
Springfield, PA 19064

Subj: Mercury Emission Reduction

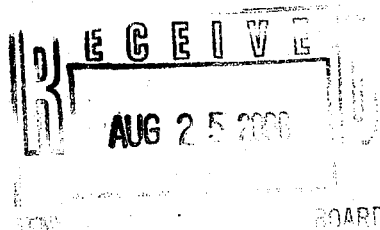

Date: 8/22/2006

As a Pennsylvania resident, I strongly support the DEP's proposed mercury emission rule to reduce mercury emissions from coal fired power plants 90% by 2015. PA is the second largest source of mercury pollution in the U.S. We know that mercury is dangerous for children, and fish across our state are contaminated.

I urge you to oppose any pollution trading rules for mercury, and require all coal plants in PA to reduce their mercury emissions. Please enact the DEP's mercury reduction proposal as soon as possible. Our kids' health is at stake, and they deserve protection today!

Thank you.

Legislation aimed at stopping DEP's Pennsylvania Mercury Rule is harmful! I oppose HB 2610 and SB 1201 because:

- These bills won't clean up toxic mercury. Instead, they require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades and allows mercury hotspots near dirty power plants to continue.
- Pennsylvania power plants are now the nation's 2nd worst mercury polluters and make 83% of all mercury air pollution in the state.
- Babies are at high risk of lifetime problems from mercury — it can destroy their developing brains both before and after birth.

**Commonwealth of Pennsylvania
Environmental Quality Board**

I fully support the proposed rule of the Department of Environmental Protection (DEP) to reduce mercury emissions, and I want to see it implemented as soon as possible.

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the **second worst** mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted to allow the DEP to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts.

I support the state-specific rule to reduce mercury emissions without using cap-and-trade mechanisms.

Thank you.

Environmental Quality Board

Dear Members of C.Q.B.

I'm writing in support of the State moving forward with DEP's state level proposal to cut mercury pollution from Pennsylvania coal fired power plants by 90% by 2015. These coal-fired power plants are the largest unregulated source of mercury pollution. The technology exists to cut pollution by 90% and I support DEP's efforts to reverse these cuts at our State power plants without allowing for "credit" trading - with the Bush administration weakening our environmental protection, it is essential that the States take the lead in this area.

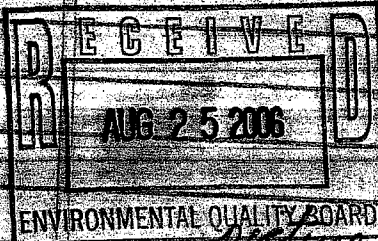

Dorothy F. Elberg, AKA

Dear EQB,

I am writing to you to affirm my support for the DEP proposal which requires coal-fired power plants to cut their mercury emissions 90% by 2015. I urge you to oppose any pollution trading plan that concentrates pollutants in certain areas. All coal-fired plants should reduce mercury emissions. We owe it to future generations of Pennsylvanians to improve our environmental conditions especially the health of our waterways.

Sincerely,

Frank Harrison

RE: Mercury Emission Reduction (# 7-405)

To Whom It Must Concern:

Please stand up to Big Coal and the electrical industries and insist they reduce pollutants they create. Specifically, make them lower mercury levels by 90% to assure children will be born, and remain, healthy. Until nuclear and alternatives exist, we are at their mercy. You have the power and are morally obligated to exercise it.

Please do the right thing. Now.

Sincerely,

Ursula S Pyle

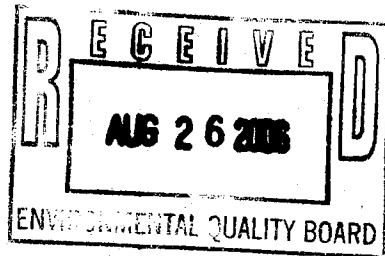

P.S. Please do not generate a form letter response.
Do not bother to write, bother to act.

To : The EQB
From : Thomas Luciani & Family

As longtime citizens of the Commonwealth of Pennsylvania, we are aware of the significant deficit in clean water & other environmental issues.

Our expectation is that The DEP. research & spend time & money to command coal-fired power plants to cut their emissions 90% by 2015.

It is an urgent message; our lives depend on it.

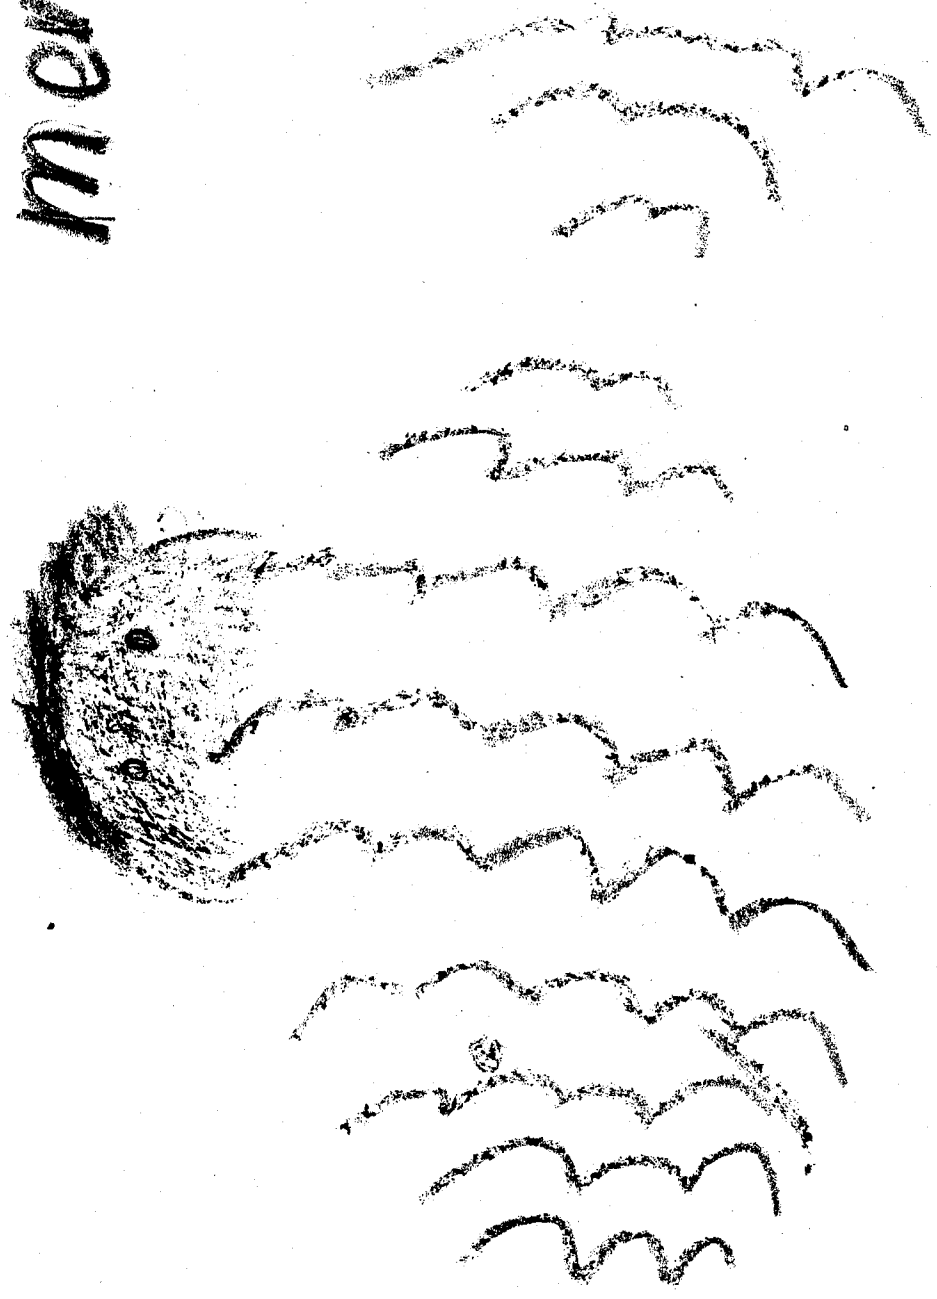

Sincerely,

Lois Luciani

Dear Environmental Quality Board,

I am writing in support of the state moving forward on DEP's state level proposal to cut mercury pollution from PA coal fired power plants by 90% by 2015. Coal fired power plants are the largest unregulated source of mercury pollution which contaminates our waterways & the fish we eat. Medical experts say even low levels of mercury exposure can affect the way kids learn, think, memorize & behave. The technology exists to cut mercury pollution by 90% - I support DEP's efforts to require cuts at power plants instead allowing mercury pollution "credit" trading. - It is essential that PA state take the lead in protecting environment & public health.

Dear Environmental Quality Board,

I'm writing in support of DEP's state-level proposal to cut mercury pollution from Pennsylvania's coal-fired power plants by 90 percent by 2015.

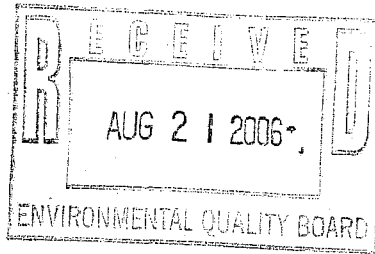

Is there any doubt that this proposal will benefit all Pennsylvanians, most importantly, our children and our seniors. Think of your own families.

In addition, it is time that we reverse the national reputation of Pennsylvania being a polluted state. Why can't we set the example of what can be done. Let's capitalize and preserve the natural beauty of our state. We have so much to gain. (ex. tourist dollars, retention of our residents, health benefits, etc.)

Thank you for your time.

August 13, 2006

Dear Board Members:

I'm writing to express strong support of Pennsylvania's Department of Environmental Protection's proposed rule to reduce mercury pollution from Pennsylvania's coal-fired power plants 90% by 2015. Even small levels of mercury exposure can affect the way kids learn, think, memorize, and behave. Coal-fired power plants are responsible for at least 40% of the nation's mercury emissions, and Pennsylvania's power plants have the second highest mercury emissions in the country. This mercury accumulates in lakes and rivers contaminating fish. We need to move forward in implementing this important proposal.

Sincerely,

Jean Fox

Dear Environmental Quality Board,

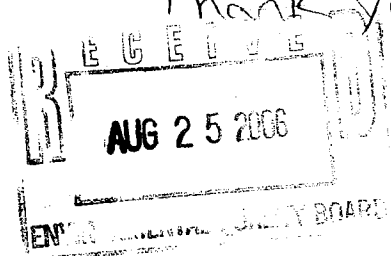

I am a mother of 3 children and am very concerned about the amount of mercury pollution coming out of coal-fired power plants in Pennsylvania.

I strongly support the DEP proposal to require coal-fired power plants to cut their mercury emissions 90% by 2015.

The future belongs to our children, but what kind of future will they have if nothing is done about mercury pollution. Our children's health is at stake, and if that alone is not a reason to cut mercury emissions then I don't know what else there is. There is nothing more important than our children and their ~~future~~ future.

I beg you to please oppose any pollution trading plan and to make sure all coal plants reduce their mercury pollution.

Thank you for thinking of our children.

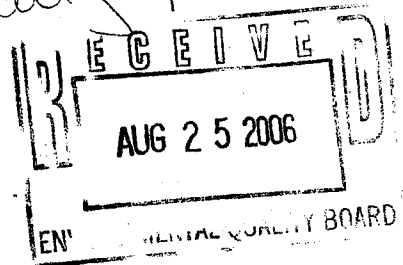

Sincerely,
Maria Rufe
220 N. Morgan Ave.

INDEPENDENT REGULATORY
REVIEW COMMISSION

The Environmental Protection Agency's (EPA) federal mercury rule will result in more mercury in our air and water than simply fully enforcing the Clean Air Act. PA is currently the 2nd worst polluter of mercury from coal-fired power plants in the country. PA coal is also higher than most in chlorine content which makes it more apt to fall closer to its source. Our children deserve to grow up in a state that leads the way on reducing mercury pollution. I encourage the adoption of the Department of Environmental Protection's (DEP) proposed PA specific mercury rule which aims to reduce mercury pollution by 80% in 2010 and 90% in 2015 at all applicable sources, and prohibits the trading or netting of mercury pollution credits. We have the opportunity to protect our families' health and safety by implementing a PA specific mercury reduction rule as soon as possible for the sake of our community and our children's health.

Remember, Environmental Protection does not mean let business & industry do what they want for profit.

Subject: Mercury Emission
Reduction Requirements
for Electric Generating Units

Dear EQB, (# 7-405)
As a lifetime resident of PA and
employee of Clean Water Action I fully
support DEP's 90% reduction of mercury
emissions by 2015. There is no reason
why our state should not pass its own
state rule to protect our public health
especially when the federal reductions are
so weak and would allow trading of
pollution between states. Mercury is a
neurotoxin and does not belong in our
waterways at such high levels. We
should not have to limit the number
of fish we can eat: we need to stop
the source of mercury and clean up PA's
waterways at a state level!

RE: Mercury Emission Reduction Requirements
for Electric Generating Units (#7-405)

Dear EQB:

I would like you to know that I fully support Ed Rendell's 90% mercury emissions reduction plan that would mandate ~~the~~ coal-fired power plants to end this needless and senseless destruction of our environment. I would also like to inform you that I oppose ALL pollution trading plans. It is essential that all coal plants reduce their mercury emissions, not simply the ones who can't afford to buy other credits.

More respect should be given to our environmental quality on a state and nation-wide level. The fact that only two plants have voluntarily used available technology that ~~would be~~ is known to protect public health is appalling. Technology is developed for these reasons. Politicians are put in office to make these common sense decisions. It's sad that we've come to this point that we can't trust them with common sense and public health.

I fully support the DEP's rulemaking on reducing mercury emissions and want to see it implemented as soon as possible.

INDEPENDENT REGULATORY
REVIEW COMMISSION

The DEP rule is needed because the illegal federal rule is inadequate and delays mercury reductions for decades. The federal rule sets up a trading scheme resulting in high mercury contamination near power plants that buy credits from up-to-date plants, instead of doing what is affordable and possible here at home.

Pennsylvania power plants are now the SECOND WORST mercury polluters in the country and are responsible for 83 percent of mercury emissions released in the air in the Commonwealth. The health effects of mercury are well known; babies have the highest risk of lifetime health problems, since mercury can destroy their developing brains and neurological systems both before and after birth.

The Environmental Quality Board voted in 2005 to allow the Department of Environmental Protection (DEP) to move ahead with drafting a state-specific rule. This rule came out of a lengthy stakeholders process that included industry, health groups, environmental organizations, and experts. I support the state-specific rule that does not rely on trading to reduce mercury emissions.

Thank you.

Dear member of EQB,
Please oppose any pollution trading
plan and make sure all coal plants
reduce their mercury pollution - our children's
health is at stake.

Thank you

Re: Mercury Emissions Reduction
Requirements for Electric Generating Units
(#7-405)

We support the D.E.P. proposal to
require coal fired power plants to
cut their mercury emissions 90%
by 2015. Please protect all of our
future health and oppose any
pollution trading plans. Make
sure all coal plants reduce their
mercury pollution.

Thank you,
The Romano Family

To: Environmental Quality
Board

I support the DEP
proposal to require coal
fired power plants to cut
their mercury emissions
90% by 2015. My children's,
as well as all children's
health, is at stake. I
urge you to oppose any and
all pollution trading plans.
Please make sure all
coal plants reduce their
