Dear Environmental Quality board,

I am writing to you to let you know I support the DEP proposal to require that coal fired power plants cut their mercury emissions by 90% by 2015.

I feel that coal powered plants are a threat on every level to our health and environment. Mercury is poisonous and causes a great deal of health problems. One of which is Autism, which seems to be growing at an alarming rate.

Please continue to support this proposal and be sure that ALL coal power plants reduce their emissions.

Regards,
Shanna Mandell

whomever it may concern,

I am writing to discuss the "Mercury Emission Requirements for Electric Generating Units (#7-405)". I urge you to support plans which would require coal fired power plants to cut mercury emissions by 90% by the year 2015. This is an intelligent decision which would benefit thousands of Pennsylvanians who live off and enjoy the fishing in this state.

My family own and operate a bait and tackle shop in Burgettstown and the decreased ~~mg~~ emissions would benefit their business. At the same time fishing is very popular in PA and is a major tourist attraction. Our wildlife is important to the state's fiscal health as well as the health and wellbeing of our population.

I feel it is important to enact the D.E.P.'s recommendations. I also feel it is important to oppose any pollution trading plans and to require all coal fired plants to comply. The future of our wildlife and ultimately ourself is at stake. Thank You.

Sincerely,

Mercury Emission Reduction Requirements for Electric Generating Units

Dear EQB,

(#7-405)

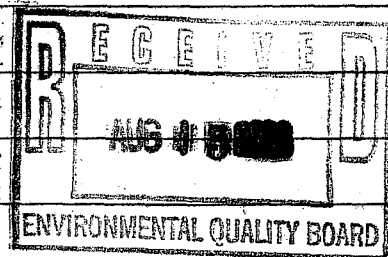

I support the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. The health of our community and its children is at stake. This issue is dire and we cannot afford to push it under the rug any longer. Oppose any pollution trading plan! Pollution trading just perpetuates the before mentioned skirting of the original problem. Make sure all coal plants reduce their mercury pollution. It sickens me as a citizen of PA that this is still a problem and that it is being ignored. It's time to stop letting these plants get away with making our children sick with their mercury waste.

Sincerely,

Richard Casey Jr.

Dear Board Members:

I am writing this letter to indicate my support for Mercury Emission Reduction Requirements for Electric Generating Units (#7-405). One of the by-products of coal-burning power plants is mercury. I would ask you to consider supporting legislation that requires these plants to reduce their mercury pollution 90% by 2015.

In addition, I am writing this letter to express my concern about the poor quality of water in the state of Pennsylvania. The fish caught in our lakes and streams have high levels of mercury, which are harmful to people when consumed. Mercury has been shown to affect the way children learn, think, and behave. Mercury doesn't leave the human body once it is ingested, and so even unborn children may be affected by mercury consumed by their mother in previous years.

Even though the coal and electric power industries oppose such legislation, the costs to the wonderful environment in Pennsylvania and to human lives is more important. Please take courage by this letter and those like it to stand up to big business which seeks short-term solution to problems that really need a long-term safer solution.

AUG 17 2006

ENVIRONMENTAL QUALITY BOARD

August 13th, 2006

Dear Environmental Quality Board,

I am writing in support of the state moving forward with DEP's state-level proposal to cut mercury pollution from Pennsylvania's coal-fired power plants by 90 percent by 2015. Coal-fired power plants are the largest unregulated source of mercury pollution, which contaminates our waterways and eventually the fish that end up on our dinner plates. Medical experts say that even low levels of mercury exposure can affect the way children learn, think, memorize and behave. The technology exists to cut mercury pollution by 90% and I support DEP's efforts to require these cuts at Pennsylvania power plants without allowing for mercury pollution "credit" trading. With the Bush Administration weakening our federal mercury protection, it is essential that state decision making take the lead in protecting our environment and public health by cutting the toxin pollution from Pennsylvania power plants.

Dear Members of the
Environmental Quality Board,

I write to you in hopes that you
will support moving forward with
the DEP's state proposal to cut
mercury pollution in PA. Coal
fired power plants are very dangerous
to our environment. There is a
known way to cut the mercury
pollution, so I would hope beyond
hope that you would take this
action to support the people of PA —
especially infants & young children.
These times are filled with dangerous
pollutions — couldn't you do something
to curtail this. I am grateful for your
support
With hope
