Re: Mercury Emission Reduction requirements for Electric Generating Units (#7-405)

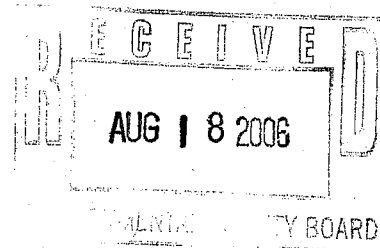

To Whom It May Concern:

I have a 6 year old daughter and her and her potential children's health is at stake because of growing water pollution. I support the DEP Proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. Please oppose any pollution trading plan and make sure all coal plants reduce their mercury pollution.

Thank you,

Jennifer L. Kerr

Environmental Quality Board
P.O. Box 8477
Harrisburg, PA 17105-8477

Dear Members of the Environmental Quality Board:

I am writing in support of the state moving forward with DEP's state-level proposal to cut mercury pollution from Pennsylvania's coal-fired plants by 90% by 2015.

Mercury pollution contaminates our waterways and eventually the fish that we eat. This especially affects the way children learn, think, memorize and behave - according to what medical experts say.

The technology exists to cut mercury pollution by 90%. Therefore, I support DEP's efforts to require these cuts at Penna. power plants without allowing for mercury pollution "credit" trading. We cannot rely on the Bush Administration for this. So it is essential that state decision making take the lead in protecting our environment & public health by cutting the toxin pollution from Penna. power plants.

Sincerely,
Sister Genevieve Murray, M.M.S.
8400 Pine Road.

I am writing to express my support for the Department of Environmental Protection proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. Please oppose any pollution trading plan and make sure all coal plants reduce the amount of mercury pollution they produce.

David A. Bussick

1610 Homestead Rd.
Verona PA 15147

Dear Environmental Quality Board,

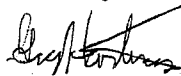

I love Pennsylvania because of its natural beauty, beautiful rivers and streams, and plentiful wildlife, but there is a silent killer that is doing more harm than we think... mercury emissions from coal fired power plants. We are #2 in the United States for the amount of mercury we emit and that is unacceptable.

I am in strong support of the DEP proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. My child's health is at stake and he is of utmost importance to me, as I am sure your children are to you.

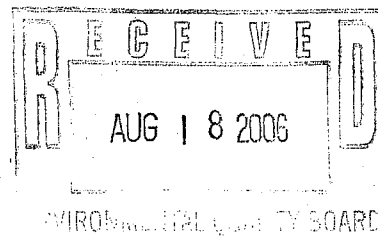

I know the lobbying groups from coal and electric power industries are fighting tooth and nail against these measures, but I strongly believe that we need to look well past tomorrow. I am sad to say that I am terrified for my children and grandchildren because I do not believe that large scale environmental degradation will ever cease. Our land and water will continue to worsen and I don't even want to think about the luxuries we enjoy today eventually causing our demise.

In closing, I strongly urge you to oppose any pollution trading plan and to make sure all coal plants reduce their mercury pollution. Thank you for your time.

Sincerely,

Greg Hartman

RE: Mercury Emission Reduction Requirements for Electric Generating Units (#7-405)

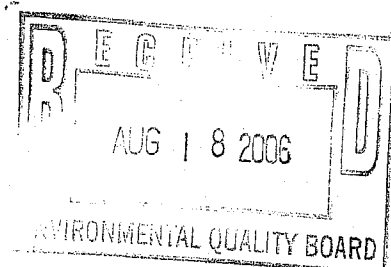

I support the plan to reduce coal-fired power plants mercury pollution by 90% by 2015. I hope you will stand up to the coal & electric power industries and insist that this plan is implemented. All plants should reduce their mercury pollution. We pay for this one way or another – either in our children's health or with upgraded plants. I choose upgraded plants!

It seems so contrary to what we know to not be able to restrict this poison from being dumped into our water. If we didn't know we wouldn't be able to do anything. We do know and we can do it right.

Thank you,

To whom it may concern:

We are writing today to urge you to support the Department of Environmental Protection proposal to require coal fired power plants to cut their mercury emissions 90% by 2015. We have raised our children in Pennsylvania and have a large extended family living in the state, and will eventually have grandchildren that visit and enjoy all that Pennsylvania has to offer. In order to insure the safety and health of our children, we believe that this proposal is necessary. Please oppose any pollution trading plan and vote to make sure all coal plants reduce their mercury production.

Sincerely,

Re: Mercury Emission Reduction Requirements for Electric Generating Units

As a Pennsylvania resident I am very much alarmed at the amount of mercury found in the environment. This substance has found its way into our bodies, especially affecting children. The many coal-fired power plants in this state are the cause of this problem.

The DEP wants to reduce mercury pollution by 90% by 2015, but this is strongly opposed by the coal and electric power industries who are only interested in profits. I think the health and well-being of our citizens is more important.

I urge you strongly to support the DEP proposal, and to oppose any pollution trading plan. Let's leave a cleaner environment for the coming generation.

Thank you,

Linde Fiore

Year 2015,

I am writing to show my support of the DEP proposal to require the coal plants to cut their mercury emissions by 90%. Any amount of money that the coal power plants are producing is not worth the health or well-being of the people of Pennsylvania. The health of our children is at stake. We should be able to boil a pot of water or give our child a drink without worrying about brain dysfunctions because of it. Please work for your families and ours by opposing any pollution trading plans and fighting for laws that force coal plants to reduce mercury pollution.

TO: Members of the Environmental Quality Board
RE: Pennsylvania Specific Mercury Reduction Rule

The Environmental Protection Agency's (EPA) federal mercury rule will result in more mercury in our air and water than simply fully enforcing the Clean Air Act. PA is currently the 2nd worst polluter of mercury from coal-fired power plants in the country. PA coal is also higher than most in chlorine content which makes it more apt to fall closer to its source. Our children deserve to grow up in a state that leads the way on reducing mercury pollution. I encourage the adoption of the Department of Environmental Protection's (DEP) proposed PA specific mercury rule which aims to reduce mercury pollution by 80% in 2010 and 90% in 2015 at all applicable sources, and prohibits the trading or netting of mercury pollution credits. We have the opportunity to protect our families' health and safety by implementing a PA specific mercury reduction rule as soon as possible for the sake of our community and our children's health.

Legislation aimed at stopping the DEP's Pennsylvania Mercury Rule is harmful! I oppose HB 2610 and SB 1201 because:

- These bills won't clean up toxic mercury. They instead require Pennsylvania to follow an illegal federal rule that delays mercury reductions for decades, creating a trading scheme allowing mercury hotspots near dirty power plants to continue.
- Pennsylvania power plants are now the 2nd worst mercury polluters in the country, and put out 83% of mercury to our air.
- Babies are at high risk of lifetime health problems from mercury, since it can destroy their developing brains and neurological systems both before and after birth.

I support the DEP's proposed Pennsylvania Mercury Rule!

- Mercury from power plants is toxic. Even small amounts can harm our most vulnerable: developing babies and children.
- Pennsylvania power plants account for 83% of the state's mercury pollution, and are the second worst in the nation.
- Mercury pollution falls out close to the source, leaving us with dangerous areas of high contamination near power plants.
- The federal rule fails to protect us, allowing dirty plants to buy pollution credits from clean ones in other states.

August 2006

We support a comprehensive plan to require a major reduction in mercury pollution from our state's largest source - power plants.

We realize that our state of Pennsylvania ranks third nationwide for the most mercury emitted by power plants.

Studies show reducing mercury emissions directly benefits us and our children, grandchildren, & future generations.

Harrisburg Pa, 17105
847.

Dear Sirs

This letter is in support of the DEP proposal to require coal fired power plants to cut their mercury emissions. Because I do understand about disabilities in our children I have a grandson who is disabled in many ways we don't know what caused it but any way we can help our quality in life for all I'm for it.

Respectfully,
Sandra Hodge

To whom this may concern,

7-13-06

my name is Emily Barnett and I am writing to the EQB to say that I support the DEP's proposal to require coal fired power plants to cut their mercury emissions 90% by 2015 if not sooner. The future is no longer yours it is your childrens and your grand childrens mercury is a dangerous substance that is putting our health on the line. There shouldn't be things like pollution trading plans and all coal plants should reduce their mercury pollution it gets into our water supply and soon there could be no clean water for our kids. Remember who your future belongs to.
