Subject: Proposed raw dairy regulations

Dear Ms. Kaufman.

I am very concerned re proposed raw dairy regulations (#2777 Department of Agriculture 2-160: Milk Sanitation). I understand that aspects of the regulation are excessive, unnecessary, and overly burdensome.

I have benefited from raw dairy products for some time now, and my concern is that burdensome and unnecessary regulation of this industry will cause many small farmers to no longer be able to produce.

That will cause a SEVERE health hazard and hardship to me and to many other families who depend on raw dairy products for their health and well being.

It is unfathomable to me why so many items 100% detrimental to health (cigarettes, junk food, and the like) are available so readily (as they should be in free country) -- but why something as beneficial as raw milk should be so restricted.

Though some regulations can be helpful and necessary -- overly burdensome ones can do much more harm than good.

I urge you to reject the proposed regulation.

Thank you for your consideration.
