INDEPENDENT REGULATORY  
REVIEW COMMISSION

**Attention: Paul Hoge**

My family resides in Virginia and has been consuming raw dairy products for about 10 years. We have very few doctor or dental bills, or miss days of work or school. We really on the dairy farmers of Pennsylvania for our dairy products and consciously spend a great deal of money on these special products because they have proven to keep our family healthy. Besides helping our family, at almost \$11 a gallon for goat milk, we are definitely benefitting the economy of Pennsylvania as well.

I urge PDA to make the following changes to the proposed regulations:

- Exempt direct transactions from the producer to the consumer from the regulations
- Specify that state resources should only be used for the testing of "pathogens that cause illness in humans"

Thank you for your consideration of this matter. Please feel free to contact me with any questions you may have.
