INDEPENDENT REGULATORY  
COMMISSION

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Leon Stolarski  
1502 huntly dr.  
Warrington, PA 18976

DIVISION

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Ms. Barbara Royer  
112 N. Valley Forge Rd.  
112 North Valley Forge Road  
Devon, PA 19333

Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Nancy B DelPrest Nancy Delpresto

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Diane Bono

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Mrs. Meryll Glad Meryl Gladstone  
910 S. 47th St.

REVIEW COMMISSION

RE: PROPOSED RULEMAKING on 25 Pennsylvania. CODE CH. 102: Erosion and Sediment Control and Stormwater Management

Pennsylvania has over 83,000 miles of streams. This is an important resource and we need to protect it! This is why the regulations for erosion and sediment control and stormwater management need to include a mandatory stream buffers program, not a voluntary one. Pennsylvania's streams cannot afford more pollution and runoff, and we cannot afford increased flooding and drinking water treatment costs.

Pennsylvania should require forested buffers of at least 100 feet on both sides of every stream in our state, with 150 feet on small headwater streams and 300 feet on Exceptional Value and High Quality streams.

Forested Buffers are good for the environment and the economy. Buffers will reduce pollution of our streams, limit erosion of stream banks, improve habitat for fish and keep streams cooler. They will also increase property values for nearby properties, and cut stormwater management costs and drinking water treatment costs. And they will reduce damage from flooding, which costs \$ 6 billion a year. Many municipalities in Pennsylvania already require at least 100 foot buffers, making development better for our communities and the environment.

Please make stream buffers a mandatory requirement on all streams in Pennsylvania!

Sincerely,

Mr Thomas Ditmars
