ENVIRONMENTAL QUALITY BOARD

Dear Mr. Rendell

Forested Buffers are for the environment and the economy because they reduce pollution, flooding, and increase property values. They also clean the air around us and make it possible to breathe cleaner, fresher air.

We need a minimum of 100 forested buffers on all streams in PA. They will help not only us but wildlife as well. We need to remember that our children and grandchildren also need to breathe fresh air. Clean water is not only important to me but it is essential of all life. We are looking on signs of water on the moon and Mars, when we really need to protect what we have here. Please listen to your constituents and save our water.

Joanne Durann
