Re: Stream Buffers:

RECEIVED

DEC - 9 REC'D

INDEPENDENT REGULATORY
REVIEW COMMISSION

As we all know run-off from land without vegetation is not only pollution causing but causes a "domino" effect with flooding and run off.

Pennsylvania streams should have wooded buffer zones in excess of 100 feet wherever possible to reduce contaminants entering into the drinking water and aiding in the cessation of costly treatments in purifying the water.

Thank you for your attention to this matter.

Sincerely yours
