Subject: Outdoor wood - fired boilers

JAN - 4 REC'D

INDEPENDENT REGULATORY
REVIEW COMMISSION

The proposed ammendment concerning wood - fired boilers will control emissions by eliminating their use to the majority of the people who have to use them. Most of the people using them can not afford other types of fuel or do not have access to other types of fuel. The proposal also is added regulations that we the people do not need, also adding to the fact it will increase cost by permits and added taxes down the road. Therefor I am not in favor of the proposal.
