Subject: state regulation of outdoor wood-fired boilers REVIEW COMMISSION

Importance: High

Attention: Department of Environmental Protection

We are writing in support of the proposed regulations to restrict the use of outdoor wood-fired boilers in Pennsylvania. We have first-hand experience of a neighbor's boiler and have problems with a boiler that is located close to two elementary schools in town. Both emit a great amount of smoke. For sure, one is not using properly seasoned wood. Particularly of help will be the height of the stack and what materials can be burned. The proposed regulations will be welcomed and are beneficial for all.

Sincerely,

William Colton
