**COMMENTS on PROPOSED RULEMAKING Outdoor Wood-Fired Boilers**

I will say this as respectfully as I possibly can. If you were sincerely concerned about the health effects on the general population then you would do as much as possible, not as little. There should be no question as to seasonal limits.

Just because something is supposedly 90 % cleaner doesn't make it clean. They will never be clean as long as you allow them to smolder their fuel. Pellet boilers my friends pellet boilers. That is your answer. They don't smolder and burn cleaner.
