

I consider my self to Be
 Environmentally Responsible I
 Chose to use a wood stove because
 All other forms of Heat for
 my House does Environmental Damage
 AN INCREASE in CO₂ Burning wood
 falls in a cycle the tree removes
 CO₂ AS it grows when it dies
 it releases what it removed Oxygen
 effect on the environment. NO other
 fuel can claim this. I Live
 in AN extremely rural AREA
 I HAVE 1 neighbor we talked Before
 I got my stove He HAD NO problem
 with it. ~~the~~ 6 weeks After I
 Lit it for the first time I
 ASked Him if it Bothered Him.
 He SAID "we didn't Even Know you Lit it"

Leaching out of the Soil
the main reason I don't Burn
COAL in my Stove. the ASHES
Have to Be disposed of. But not
in my GARDEN. If I quit Burning
my Stove I will pay much more
for fuel to Heat my Home and
I will create pollution from
Burning Oil. ALSO the Oil I don't
Burn will Heat Someone's else's
Home Reducing our dependance
on Foreign Oil MAKING the
Country Safer.

Sincerely,
JOHN HANNA JR.
