

- I feel that this should not affect the home owner.
- Did anyone check into what might happen to the furnace if you would extend the stack that high.
- If the home owner would have to get rid of the furnace, who would pay to get the furnace replaced, The Government, because the home owner should not have to. (But that would be like getting blood out of a stone.)
- There are less house fires, because the furnace is outside of the home.
- I feel that this should be on an individual (home owner) basis, or location.
