**Subject:** Re: Proposed Rulemaking [25 PA. Code CHS. 121 and 123] Outdoor Wood-Fired Boilers

I have been informed that there is a bill in the making to restrict and basically increase the cost of outdoor woodburners to a point where they will not be cost effective as an alternate energy heat source. I think this is a topic for local cities and townships and support this regulation at this level. The vast area where these burners are used cannot be covered under one bill at a state level. Pennsylvania has so much open area where the affect of the burners is almost nonexistent. If they are placed near homes and in towns there needs to be stricter regulations. Wood is certainly a more environmental friendly fuel. There are many other fuel sources that contribute to green house gases and should be restricted. Penn State has many articles on this and should be reviewed before trying to regulate outdoor wood burners. I guess the bill is saying that if you put the wood burner indoors then it is fine. Consider the big picture.
