Subject: outdoor wood boilers

RECEIVED

2010 JAN 19 PM 1:42

I am in complete favor of the new regulations concerning outdoor boilers as proposed by the DEP's EQB. The odor and smoke from these units is objectionable to people whom happen to live in the vicinity. If the boiler is also being used to heat domestic water these units are running year round; which means that opening your window in the summer invites all that smoke into your home - people with respiratory problems are made to suffer.
