Subject: new laws for outdoor furnace

FEB 2 - 2010

INDEPENDENT REGULATORY
REVIEW COMMISSION

I am writing to ask that the new proposed regulations be changed

- 1) The proposed chimney regulation would be almost impossible to construct at our residence. My (3) story home is less than 500 ft from my outdoor furnace thus we would need a (35) thirty-five foot chimney. The wind would be constantly knocking it over even if we were able to construct such a monster.
- 2) The trash we burn in the furnace is not tires, plastics, chemicals or the like. Are you suggesting that we do like many other rural people and use a burn barrel or just open burn it on the ground and either way risk setting the forest on fire.
- 3) We live on (30) thirty acres of mountain land our closest neighbor is almost a mile away
We are very much of the environment and try to do our part to protect it. Our furnace does not pollute any more than the average home owners oil furnace or their fire place or wood stove as we use almost all hardwoods for fuel. The furnace is a lot safer than anyone's indoor furnace:: NO FLUE FIRES:: NO INDOOR FUMES

So we are asking that you reconsider the proposed regulations

Thank You,
A safe outdoor wood furnace owner
