Subject: Wood-fired boiler issue

I live in rural Crawford County and heat with a high efficient wood burner. We burn dry wood unlike most people with wood boilers. The smoke can contest they burn wet wood and use oil and stuff to start their fires. No concern for the environment. Since these people can't use common sense courtesy to the environment and their neighbors you must enact laws. Keep up the good work. I fully support the regulations currently proposed for wood fired boilers.
