Subject: outdoor wood-fired boilers (OWBs) are a terrible pollution source

Sirs:
I write to object to allowing outdoor wood-fired boilers under any conditions. As anyone who has ever been near these things can tell by smell and sight, these boilers with their wood fuel are a worse source, far worse, of particulate pollution than any other fuel-- coal, oil, or gas. They should be discouraged, as they will only make us sick and are totally unnecessary. Installation of pollution controls will entirely eliminate the "cost benefit" of these ridiculous devices, so until they can be banned, strict limits must be imposed on them.

This is the job of the environmental quality board-- do it. Stop this pollution source now.

Thanks
