Subject: Regulation on Outdoor Wood fired boilers in Pennsylvania

Dear Environmental Quality Board,

I am sending this to you in regards to your purposed regulation of the outdoor wood burning boilers. To say that I am dumbfounded by your current proposal is the very least. I cannot believe that you find this subject in your jurisdiction. This is America, the FREE country. Have you lost all sense of what that means? Have you totally forgotten what your parents, grandparents and for fathers fought for? Can you please answer me this question, why on this free country's earth do you feel that this legislation is necessary as a "blanket" legislation for the entire state? Also, why do you feel wood pellets are the only viable source to heat these boilers by? Do you have a financial stake in the wood pellet business? Are you totally forgetting that trees, are our most renewable, recyclable, biodegradable resource, i.e. this translates into firewood? And finally, isn't there something better that you can find time to regulate? Do you, honestly deep down feel that you are really truly helping anyone out with this type of lawmaking? Maybe I am missing something, if so please kindly inform me. Sincerely, Veronica English 983 Jo Jo Rd Kane, PA 16735 bmcfarm@pennswoods.net PS remember, the citizens of this country still can and will pass their votes on election day, and each one of you has an election day at some point or another.
