Subject: wood boilers

2009 NOV 12 PM 3:08

INDEPENDENT REGULATORY
REVIEW COMMISSION

I can't believe anybody would put out such a crazy list of regulations for a wood boiler.....since this country was inhabited how did people keep warm?????? Since the beginning man has started a fire to keep warm...but you say it's pollution.....not so, if it were the case we'd no longer be here! My son recently graduated from forestry school at Penn Tech in Williamsport, where he learned that wood is the less harmful than natural gas or propane. The smoke from a woodstove is mainly steam. The real problem is facts versus heresay! Research wood burning and the gas that goes into the atmosphere from natural gas stoves...and who is putting out all the bad ads on woodstoves...could it be the gas companies still wanting to line their pockets even more???

Diane Schoonover- going back to burning wood because I can't afford the outrageous gas bills.
