Environmental Quality Board,

I heat my house with an outdoor wood fired Furnace. I used to heat with oil, but it costs so much that my house was always cold. Since I put in my wood Furnace, my heating cost is  $\frac{1}{4}$  of what it used to be and now my house is warm. I have been reading that a regulation is purposed that would make it very difficult for me to use my Furnace. I also understand that this regulation would be retro-active. How is it right to do this? Please know that this would create a big hardship on myself and many other Furnace owners. I bought my Furnace in good faith and only burn wood in it. Please consider this when going over this regulation.

Thank you
