Subject: regulations controlling outdoor wood-fired boilers

DEC 7 REC'D
INDEPENDENT REGULATORY
REVIEW COMMISSION

We fully and completely support the following proposed regulations controlling outdoor wood-fired boilers:

A person may not purchase, sell, offer for sale, distribute or install a boiler unless it meets Phase 2 standards for efficiency.

New boilers must be installed at least a minimum of 150 feet from the nearest property line.

New boilers must have a permanently attached stack that must be at least 10 feet above ground and extend at least two feet above the highest peak of the highest residence located within 150 feet of the boiler.

Existing boilers must also have a permanently attached stack that is at least 10 feet above ground and extend at least two feet above the highest peak of the highest residence located within 500 feet of the boiler.

Only clean wood, wood pellets made from clean wood and certain home heating oil, natural gas or propane fuels can be used in the boilers.
