Subject: wood stove regulations

DEC 7 REC'D

INDEPENDENT REGULATORY
REVIEW COMMISSION

I am making my voice heard by explaining to you why we need wood stoves! I am sick and tired of the government trying to regulate EVERYTHING! It's turning into communism and it's absurd! It infuriates me! We just installed an outdoor wood furnace and invested a lot of money trying to help us out in the long run! The cost of natural gas and propane is ridiculous and many people just CANNOT swing that kind of bill! Ourselves included! We worry so much about the environment and being "green" that you completely overlook that simple fact that it's a need of the people! It's like telling people that they have to buy a hybrid car because it's "greener" even though they have a perfectly fine car in the driveway! We are on a budget...unlike the state! We try to stick to the income that comes into our households and do whatever means necessary to abide by that budget! I understand some government officials can't recognize that because that's a new concept...but that's how it works or should work! Why must you make it so difficult on people and regulate ourselves to death! It's sickening and I'm tired of it! Make it stop!
