Dear D.E.P. Officials

ENVIRONMENTAL QUALITY BOARD

Im Sitting here looking at the U.S. Flag flying on top of a Range Resource drilling Rig. It represents to me "America on the Move to Resource Independence Advance" Technology & "Technics" getting To and extracting Gas by a Frac method. one mile and more down under is an amazing feat to me. They recycled the water when that was targeted as a Problem. These American Companies and others are providing jobs. I count up to eight cars and trucks at one Rig Pad, and there are four within Eight miles of here. Plus the trucking & Supplies excavating company and others involved in this endeavor. The distribution Pipes are working there way here. Please do not throw up unattainable rules to discourage this investment and stop or move this economic blessing from our area. These endeavors are needed for Our Country.

I thank you for taking the time to read this.
