Subject: Comments on Chapter 95 regulations

JAN 13 AM 11:04

INDEPENDENT REGULATORY
REVIEW COMMISSION

To whom it may concern,

I would like to echo the concerns of many friends, who I'm sure have already written you. I'm very concerned about the prospect of gas drilling creating an environmental disaster, and the strength of your regulations will definitely help keep the system in check. The comments are as follows:

1. We need safe drinking water! DEP's proposal will go a long way toward ensuring that our drinking water supplies will not have unsafe levels of total dissolved solids (TDS). The Monongahela River, Youghigeny River, Conemaugh River, West Branch of the Susquehanna River already have high levels of total dissolved solids. DEP should not weaken their proposed discharge standard for TDS.
2. We need these regulations to be in place as soon as possible to protect our rivers and drinking water. DEP should stop issuing more drilling permits until wastewater rules are in place and the wastewater is treated. At present, most of the wastewater produced at a Marcellus gas well is discharge into our streams without treatment to remove chlorides, sulfates, and heavy metals. DEP should also stop allowing existing or proposed wastewater plants to pollute our rivers unless they follow these new rules.
3. DEP should add discharge standards for those contaminants that are frequently found in Marcellus Shale gas drilling wastewater. These would include bromides, arsenic, benzene, radium, magnesium, and possibly others. Many of these contaminants are very difficult for drinking water systems to remove.
4. DEP needs to ensure that all aspects of the generation of Marcellus wastewater are regulated. Currently there are no requirements to track wastewater from drilling sites to treatment plants. There should be a "Record of Responsibility", a paper trail of the quantity of frackwater being transported and signed receipts for each delivery. In addition, there should be strict oversight over the reuse of Marcellus wastewater.

Thanks for your consideration!
