REVIEW COMMISSION

Subject: (no subject)

Clean and plentiful water is Pennsylvania greatest treasure. As you look around, water is a precious resource that can not be wasted or polluted-not in the name of jobs or political contributions. Marcellus shale is going nowhere. I urge you to wait until the gas companies have developed a way to recycle all the water they use without polluting it. Trust me, the gas companies will move faster that you can imagine to come up with a solution-it may already exist, but cost more money than they want to spend-too bad. Marcellus is huge and PA can not afford to give it all our water. Numerous incidents of wildlife and livestock being affected in the form of birth defects or death after drinking from contaminated steams next to drilling sites have been reported. After what has happened in Dimmock, PA and along the Monongahela River (corroded machinery at US Steel Clairton) it is totally unacceptable to put our drinking water at risk.

I know they are exempt from the Clean Water Act. Find a loophole to keep our water safe, they found one to destroy it. Please do the right thing for your fellow human beings, innocent animals and the planet. Keeping PA water clean and plentiful will reap enormous rewards for our future. We are counting on your to protect us - make us proud.
