Subject: wastewater regs

30 JAN 13 AM 11:13

INDEPENDENT REGULATORY
PERMISSION

DEP needs new regulations to ensure that wastewater generated at Marcellus Shale gas drilling sites does not damage streams and rivers. Marcellus wastewater contains high levels of TDS in the form of salts and can be two to four times saltier than seawater. High TDS levels can harm aquatic life, ruin the taste of drinking water and render river water unfit for industrial users.

Please see that the least amount of deforestation happens with this big business profiteering - THIS IS NOT GREEN and should be heavily taxed and regulations updated and strictly enforced.
