**Subject:** Proposed Chapter 95 regs

RECEIVED

2010 JAN 15 PM 1:49

Ladies and Gentlemen:

I don't pretend to understand the technical aspects of to what extent frackwater must be regulated, but I do understand the critical need for all to us to have safe drinking water and for our streams and groundwater to remain clean for the sake of wildlife, as well. Thus, I urge you to err on the side of safety with the regs; it's better to spend some money now in protection/prevention rather than spending money in an often futile attempt later at mitigation. We made mistakes a couple of generations ago with coal extraction; there are simply no excuses for making those same mistakes again. You really only have one chance to get this right; please don't blow it.

Chris Dunlap
