Subject: Water Quality in PA

RECEIVED

2010 JAN 15 PM 1:47

Water quality in Pa. is one of our most important issues we face today. We in our local EAC are constantly looking for ways to inform our public about this fact. With state wide protection increased we could point to the state as a good example rather than feeling our state government falls short. Water, like air is a shared resource that so easily transfers one human activity to all others, but, we do not always find water neighbors comprehending the big picture both in time and physically.

One very current concern we are dealing with here in Nockamixon Township is the regulations on fracking. Please protect our ground water (drinking and streams) from the poisonous cocktails industry wants to use at our water in expense. Local geology would make public water very expensive and we prefer our local wells.

Thank you,

Sharon Mendelson
