Subject: Marcellus Chapter 95 water regulations

JAN 25 2010

INDEPENDENT REGULATORY
REVIEW COMMISSION

Please place a high priority on monitoring and protecting our water quality and our public lands when regulating the Marcellus Gas drilling operations.

It is important that the many costs, including hidden and future costs, be born as much as possible by the production of the gas. The producers can afford it and future citizens cannot, nor should they.

Don't let the drillers dump the water in the streams.

don't wait! They are drilling now. The regulations need to be in place now!

Do the right thing for PA, present and future. You don't want your grandkids and cursing you. Maybe last century they didn't know any better. But we do.
