DEP Board Members,

2010 FEB 12 PM 1:39

I am against natural gas drilling in Pennsylvania simply because it has the potential to have an enormous environmental impact on our soil and ground water including our wet lands, creeks, rivers, lakes and streams. I have read statements made by top environmental officials and including biologists with our states fish and wildlife agencies, and everything they have warned us of seems to be unfolding right before our very eyes. You cannot hide what has been happening across our state in the past year alone and our states governor seems oblivious to the environmental impact taking place. He seems so obsessed by the monetary aspects of this industry that he and other representatives from around our state have turned their backs to concerned citizens and our environment. Please help us to protect our God given right to clean water.
