Subject: Chapter 95 Wastewater Treatment Requirements

My comments regarding this issue:

Pennsylvania should not be in the position of closing the barn door after the horse has left. Thus, no further drilling permits should be issued until safeguards are in place.

A system of monitoring the frac water both before and after it is cleaned should be implemented.

The frac water should be cleaned at its source.

No weakening of the total dissolved solids discharge standards should be permitted.

Sullyng our drinking water would be a monumental and fatal mistake that we must take every precaution to avoid.

Thank you for considering my comments.
