Subject: Save our water quality in NE PA

Dear Environmental Quality Board:

Please seriously reconsider the permanent consequences of all your decision regarding the wastewater treatment requirements for frac water.

Please do not weaken the 500mg/tds and 250 mg/l for sulfates and chlorides.

Please place these regulation now. **These are seriously needed regulations.**

Please add all contaminants involved with the gas industry. These include bromides, magnesiou, radium, benzene, arsenic.

Please require the wastewater be tracked from drilling site to the treatment plants.

Thank You,

Bob Giardini
