**Subject:** Comment on proposal to amend 25 Pa.?Code Chapter 95 (relating to Wastewater Treatment Requirements)

Hello,

More restrictions need to be placed on what goes into our rivers! It is critically important to have clean drinkable water in our communities. My family lives in Charleroi PA and we have noticed a huge decrease in the quality of drinking water. Our dishwasher is leaving a white crusty residue on the dishes because of the mineral contents in the water.

Fracwater should be recorded and tracked as it comes out of the ground and is sent off for treatment, to prevent illegal dumping or "watering" of the surroundings. I personally would also like to also see a comparison of what goes in vs. what goes out, to know how much is seeping into our groundwater.

Thank you for reading my comments and I plead to have our drinking water be free of heavy metals, arsenic, bromides, magnesium, benzene, radium, etc.
