Dear Pennsylvania Environmental Quality Board,

Please do something about the drilling in NEPA that's ruining the water in neighboring communities and will ruin our water soon. My father has lived and done business here all his life and now he's looking for places to move to. It's only a matter of time before something gets spilled (like the toxic cocktail of chemicals used for fracing, the gas companies won't tell us what's in them) or something leaks and ruins our water.

Even with all the money coming into the area from the gas wells, you can't just buy clean ground water. It's going to make people sick or drive people out of this area for good. Please do whatever you can to help prevent this.

Sincerely,
