Subject: gas drilling/safe water

Dear Sirs:

In regards to virtually unregulated drilling, lack of standards for wastewater management, and lack of DEP staff to monitor sites: Time to act quickly before more pollution occurs, and before more wells are drilled. Oversight is minimal, with all leniency given to the gas companies. Pay attention to the complaints of life-long residents. We are monitoring our representatives and the action they are taking regarding safe water and safe wastewater management. Lack of changes in regulation leads to more distrust of government.

Keep northeast PA clean and safe. Slow the drilling until regulations and management are in place.

Thanks,
concerned resident of Bradford County
Troy, PA
