Subject: RE: Beneficial Use of Coal Ash Proposed Rulemaking [25 PA. CODE CHS. 287 AND 290]

Dec 14, 2009

John Hanger

Dear Hanger,

As a professor of legal studies teaching Environmental Law at Bloomsburg University, and a teacher of young children at Greenwood Friends School, respectively, we are supporters of rational regulation to avoid harmful environmental action. We ask you to do your best to keep coal ash out of our drinking water. Coal ash is filled with toxic chemicals and heavy metals. Pennsylvania is the third largest US producer of this waste. We shouldn't allow this toxic substance

anywhere near our drinking water, and this rule in no way assures us of that. We see the consequences of environmental harm in the health and minds of our students every day, and you need to do what you can to minimize that unacceptable risk.

Coal combustion waste (CCW) is contaminating water sources across America including sites in Pennsylvania. Throughout the guidelines that have been proposed there are phrases like, "at the discretion of", "with department approval", or "if the Department chooses." These phrases leave significant loopholes in the guidelines and should be removed. Standards in the proposed Chapter 290 regulations must be enforceable.

This toxic coal ash should be sealed with the use of composite liners and placement guidelines that ensure isolation from groundwater. These sites should be monitored quarterly for at least thirty years after ash placement is finished.

The rules should require that pollutant levels are fully monitored surrounding the placement site. And if a monitoring point shows higher levels of contaminants than prior to ash placement it should trigger a requirement to investigate the causes of those increases.

Also financial assurance should be posted by operators before permits are issued and maintained throughout required monitoring at a site in amounts sufficient to monitor and abate pollution from the ash. And the public should be permitted to participate in the entire permitting process.

Sincerely,

Dr and Mrs Bruce Rockwood
