Subject: IV therapy

I have a question re: the proposed IV therapy.
An PLN who has met the education and training requirements ... and it lists (13) IV therapy functions the LPN may perform. My questions are re: (11) and (12):

(11) patient-controlled administration system: does this refer to PCA pumps that would be administering narcotic analgesics such as Demerol?

(12) parenteral nutrition and fat emulsion: how is this different than TPN?

Thank you,
Kim Huff
