Subject: Increased Chloride Regulation

**Environmental Quality Board**

**I want to register my approval of the proposed restrictions on Chlorides released into the streams of the Commonwealth. It is important to prevent an ecological disaster with the massive amounts of wastewater from Gas Well fracturing. Don't let this industry ruin our waterways in Pennsylvania. I come from NY State where the oil drilling and pumping wastes were allowed to run down the hillsides and into the streams when I was a youth. There were no trout in the streams, they couldn't live there. When we would try to swim there, we would come home covered in oil BS. PA streams are special. Lets do everything we can to keep them that way.**
