Let me start by pointing out how disappointed I am that these standards are not already in place. Are the events in Dimock and the Gulf of Mexico not enough incentive to move this process along? Needless to say, I certainly support the proposals to increase standards for oil and gas well casing and cementing. However, I think it is fair to point out how ridiculous it is that these standards were not in place already. It really gives credence to the folks that insist we need to slow down and assess the impact of all of these wells. Basically, it is proof that you, our government, were and are not prepared for what has and will happen. That is incredibly scary and disappointing. Stop talking, taking comments, negotiating, compromising, and TAKE ACTION!!
