Subject: Amend state regulations for casing and cementing walls - Public Participation

I think it's very important to have regulations in place to keep our ground water safe. I know there will be great benefits to the Marcellus Shale wells, but if it's at a cost of making people in PA sick, it's not worth a dime. I did receive a call from the Clean Water Protection people last week and I support the fact that we need to protect our water and we have the right to make sure things are being regulated properly.

Thank you,
Bridget
