Marcellus Shale Issue

What has more value natural gas or water? Hands down, it is water.

Water is in short supply locally and we can NOT afford to have it poisoned by natural gas, and toxic mixtures being plumbed into the ground. The natural gas companies should not be allowed to plumb ANYTHING into the ground.

I have to pay for water, and I have to pay for sewer. The natural gas companies should to pay on the same scale as a home owner for using water and paying for water removal.

We have had water shortage almost every year for the last 15 years. Each natural gas well will take close to 5 million gallons of water.

WATER IS THE ISSUE.
