Subject: CH 78 regulations

Sirs, Madam,

I strongly encourage you to strengthen drilling regulations in the Marcellus Shale regions of Pa. While we acknowledge that gas extraction is important to our economy, we also recognize that safe, clean water is a priority. I do want safeguards in place at the wellhead. Industrial strength cemented well casings. Immediate protection for water supplies. Blowout preventers & emergency response personnel within a hour of sites. Otherwise as well number into the thousands the law of averages means numerous pollution possibilities. Thank you
