Subject: gas drilling

Dear Environmental Quality Board,

We are very much against gas drilling in the Marcellus shale until regulations, safety and emergency response measures are in place , and an environmental impact study is done to insure the quality of life here in Wayne County will not be eroded.

We don't believe it is possible to drill for gas and frack gas wells without damage to our water, air and environment. If one looks at other parts of the country where the gas and oil industry is present, most of us would not want to live there.

Thank you for your consideration,

Diane Townsend and Judah Catalan
Milanville, PA 18443
