Subject: Triennial Review of Water Quality Standards (IRRC #2954)

2013 JUN 17 AM 10: 08

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.

Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.

Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am stunned that something as fundamental as CLEAN WATER has to be begged of those who can & SHOULD make a difference! It is a fundamental resource upon which all of our well-being rests! I am greatly concerned with the quality of our rivers & streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to REJECT the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. It is a MUST that a chloride standard be included in our state water quality standards.

Every child in this state deserves the right to pure water! Trust me, as a teacher I can assure you children know the difference between freshwater and saltwater! It is inexcuseable that Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt! Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Subtracting clean, safe water from our existence will have disastrous consequences. You are the ones who can & must get us proper protection for our rivers here in Pennsylvania!

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.

Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.

Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.

Subject: Triennial Review of Water Quality Standards (IRRC #2954)

Dear Members,

As a Pennsylvania resident I am greatly concerned with the quality of our rivers and streams, and as a taxpayer I hope that our state regulators are working to make sure our water is protected. I urge the Independent Regulatory Review Commission (IRRC) to reject the final-form Triennial Review of Water Quality Standards, due to the lack of any standard for levels of salt (chlorides) in our rivers. We need to make sure a chloride standard is included in our state water quality standards.

Every school child in this state knows the difference between freshwater and saltwater. I do not understand how Pennsylvania can refuse to protect our freshwater rivers and streams from something as simple as salt. Companies dumping oil and gas wastewater containing millions of pounds of salt should have to treat their wastewater, just like everyone else. Please help us get proper protection for our rivers in place here in Pennsylvania.
